

# **Leseprobe**

## **Chapter 1 INJECTION MOLDING: MACHINE AND PROCESS**

- 1.1 Introduction of general polymer processing
- 1.2 Polymer material and characteristics
- 1.3 Injection molding machine
- 1.4 Injection molding process

## **Chapter 2 EVOLUTION OF SYSTEMS TECHNOLOGIES IN INJECTION MOLDING**

- 2.1 Introduction of systems technology
- 2.2 Evolution of process control technology in injection molding
- 2.3 Evolution of process monitoring technology in injection molding
- 2.4 Evolution of process optimization technology in injection molding

## **Control**

## **Chapter 3 FEEDBACK CONTROL ALGORITHMS DEVELOPED FOR CONTINUOUS PROCESSES**

- 3.1 Introduction of feedback control background
- 3.2 Traditional feedback control: PID
- 3.3 Adaptive control
- 3.4 Model predictive control: GPC
- 3.5 Optimal control
- 3.6 Fuzzy and Artificial Neural Networks control

## **Chapter 4 LEARNING TYPE CONTROL DEVELOPED FOR REPETITIVE PROCESS**

- 4.1 Introduction of learning type control background
- 4.2 Basic iterative learning control
- 4.3 Optimal iterative learning control

## **Chapter 5 TWO-DIMENSIONAL CONTROL ALGORITHMS**

- 5.1 Introduction of two-dimensional control background
- 5.2 Two-dimensional robust control
- 5.3 Two-dimensional optimal control
- 5.4 Two-dimensional model predictive control

## **Chapter 6 FAULT-TOLERANT CONTROL IN INJECTION MOLDING**

- 6.1 Introduction of fault-tolerant control injection molding
- 6.2 Active fault-tolerant control with sensor failure: an example

## **Monitoring**

## **Chapter 7 STATISTICAL PROCESS MONITORING (SPM)**

- 7.1 Process monitoring for continuous processes

## 7.2 Process monitoring for batch processes

## Chapter 8 SPM BASED ON PHASE RECOGNITION AND HARD PARTITION STRATEGY

### 8.1 Data-driven phase recognition and phase partition

### 8.2 Phase-based SPM in injection molding

### 8.3 SPM with limited modeling data

### 8.4 Quality-oriented process monitoring

## Chapter 9 SPM BASED ON SOFT PHASE PARTITION STRATEGY

### 9.1 Transition-based soft phase partition

### 9.2 Soft phase-based SPM in injection molding

### 9.3 Dissimilarity analysis based process monitoring

### 9.4 Dissimilarity analysis based nonlinear process monitoring

### 9.5 Adaptive process monitoring in injection molding

## Chapter 10 TWO-DIMENSIONAL MODEL-BASED PROCESS MONITORING & FAULT DIAGNOSIS

### 10.1 Two dimensional dynamic principal component analysis (2D-DPCA)

### 10.2 2D-DPCA based process monitoring

### 10.3 2D-DPCA based fault diagnosis

## Optimization

## Chapter 11 IN-MOLD CAPACITIVE TRANSDUCER FOR INJECTION MOLDING PROCESS

### 11.1 Principle of capacitive transducers

### 11.2 Hardware design of the in-mold capacitive transducer

### 11.3 Detection of the melt flow in filling stage

### 11.4 Detection of in-mold status in packing & cooling stage

### 11.5 Application for online part weight prediction and fault detection

## Chapter 12 OPTIMAL PROFILING FOR FILLING STAGE

### 12.1 Introduction

### 12.2 Constant melt-front-velocity strategy

### 12.3 Soft-sensor development of average-flow-length

### 12.4 Uniform filling based on optimization

### 12.5 Optimal profile of injection velocity for different mold shapes

## Chapter 13 OPTIMAL PROFILING FOR PACKING STAGE

### 13.1 Introduction

### 13.2 Online auto-detection of gate freezing-off point

### 13.3 Influence of packing profile on part quality

### 13.4 Profiling of packing pressure

## Chapter 14 PARAMETER SETTING FOR PLASTICATION STAGE

### 14.1 Introduction

### 14.2 Neural network modeling of melt temperature

### 14.3 Optimal parameter setting

## Chapter 15 MODEL FREE OPTIMIZATION FOR PART QUALITY CONTROL

### 15.1 Model free optimization strategy for injection molding process

### 15.2 Gradient-based algorithm

### 15.3 Non-gradient-based algorithm

### 15.4 Part weight control via MFO

### 15.5 Focal length control via MFO
