Optimal Control of a Biharmonic Obstacle Problem	1
David R. Adams, Volodymyr Hryniv, and Suzanne Lenhart	
1 Introduction	1
2 Preliminaries	4
3 Existence of an Optimal Control	7
4 Approximation Problems	9
5 Characterization of the Optimal Control	17
References	24
Minimal Thinness and the Beurling Minimum Principle	25
Hiroaki Aikawa	
1 Introduction	25
2 Martin Boundary	26
2.1 General Martin boundary theory	26
2.2 Identification of the Martin boundary	29
3 Minimal Thinness	30
3.1 Minimal thinness and the Fatou–Näim–Doob theorem	30
3.2 Wiener type criteria for the minimal thinness	31
3.3 Proof of Theorem 3.3	33
3.4 Whitney decomposition and the minimal thinness ..	34
4 The Beurling Minimum Principle	35
5 Quasiadditivity of Capacity (General Theory)	37
6 Quasiadditivity of the Green Energy	39
7 Refined Wiener Type Criteria for the Minimal Thinness	42
8 Further Remarks	44
References	45
Progress in the Problem of the L^p-Contractivity of Semigroups for Partial Differential Operators	47
Alberto Cialdea	

1	Introduction	47
2	Scalar Second Order Operators with Complex Coefficients ..	48
2.1	Generalities	49
2.2	The operator $\nabla^t(\mathcal{A}\nabla u)$. The main result	51
2.3	General equation with constant coefficients	53
2.4	Smooth coefficients	55
2.5	Contractivity and quasicontractivity of the generated semigroup	56
2.6	Dissipativity angle	57
3	L^p -Contractivity for Weakly Coupled Systems	58
4	Parabolic Systems	60
4.1	The maximum modulus principle for a parabolic system	60
4.2	Applications to semigroup theory	62
5	Two-Dimensional Elasticity System	63
6	A Class of Systems of Partial Differential Operators	64
6.1	Dissipativity of systems of ordinary differential equations	64
6.2	Criteria in terms of eigenvalues of $\mathcal{A}(x)$	66
6.3	L^p -dissipativity of the operator (6.1)	68
7	Higher Order Differential Operators	70
7.1	Noncontractivity of higher order operators	70
7.2	The cone of nonnegative functions	72
	References	74
