beck-shop.de

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.
Preface

The papers comprising Vol. I and Vol. II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002), which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society) SIGIN in Korea, IPSJ SIG-DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute), and National Taiwan University in Taiwan. The papers were selected through two steps, refereeing and presentation review.

We selected for the theme of the conference the motto “One World of Information Networking”. We did this because we believe that networking will transform the world into one zone, in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e-commerce, e-service, and distance learning are a few of the consequences of these technologies, and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world-wide distributed computing system that connects people and appliances through wireless and high-bandwidth wired channels with a backbone of computers that serve as databases and object servers.

Thus, Vol. I includes the following subjects related to information networking based on wired communications and management:
- New Networking and Applications
- Switching and Routing
- Optical Networks
- Network Performance Issues
- Quality of Service
- Home Networking and Local Access Protocols
- Network Management

And Vol. II includes the following subjects related to wireless communications technologies and network applications:
- Wireless and Mobile Internet
- 4G Mobile Systems
- Satellite Communications Systems
- Network Security
- Multimedia Applications
- Distributed Systems

With great pleasure we take this opportunity to express our gratitude and appreciation to Prof. Chung-Ming Huang, who acted as PC vice-chair of ICOIN 2002, for
reviewing and encouraging paper submission in Taiwan and other locations, to Prof. Leonard Barolli, who acted as PC vice-chair of ICOIN 2002, for organizing paper reviewing in Japan, and to Prof. Changjin Suh, Prof. Sungchang Lee and Prof. Kyungsik Lim, who did excellent reviewing, editing and assembling of contributions for this book.

We are confident that this book series will prove rewarding for all computer scientists working in the area of information networking.

June 2002 Prof. Ilyoungh Chong
