

Contents

- 1 Introduction 1**

- 2 The Task of Surveillance 3**
 - 2.1 A Motivating Example 3
 - 2.2 Definitions and Characteristics of Surveillance 4
 - 2.2.1 Surveillance Task and Objectives 4
 - 2.2.2 Surveillance Process 5
 - 2.2.3 Summary 7
 - 2.3 Application Areas 7
 - 2.3.1 Surveillance in Politics 8
 - 2.3.2 Surveillance in Business and Finances 10
 - 2.3.3 Disaster Surveillance 11
 - 2.3.4 Traffic Surveillance and Management 12

- 3 Information Sources for Surveillance 13**
 - 3.1 Structured Data 13
 - 3.1.1 Sources of Structured Data 14
 - 3.1.2 Characteristics and Implications
for Surveillance Systems 15
 - 3.2 Unstructured Data 16
 - 3.2.1 The Web as Data Source 17
 - 3.2.2 Characteristics and Implications
for Surveillance Systems 20

- 4 Surveillance Methods 25**
 - 4.1 Event-Driven Architectures 25
 - 4.1.1 Characteristics of Event-Driven Architectures 25
 - 4.1.2 Processing Steps and Components 27
 - 4.1.3 Benefits 28

4.2	Data Collection Methodologies	29
4.2.1	Web Crawling and Collecting Social Media Data	30
4.2.2	Data Stream Management	31
4.3	Data Preprocessing Methods	32
4.3.1	Filtering Methodologies	32
4.3.2	Text Analysis and Natural Language Processing	34
4.3.3	Sentiment Analysis	39
4.3.4	Role of NLP for Surveillance Systems	41
4.4	Data Analysis and Interpretation	41
4.4.1	Event Detection Methods	41
4.4.2	Event Tracking	46
4.4.3	Aggregation of Events	47
4.4.4	Interpretation of Detected Events	48
4.5	Ontologies for Surveillance Systems	49
4.6	Presentation of Information and Alerts	51
5	An Example: Disease Surveillance-from Web 2.0	55
5.1	The Task of Disease Surveillance	55
5.2	Event-Driven Architecture for Disease Surveillance	57
5.2.1	Content Collection Component	58
5.2.2	Document Analysis Component	59
5.2.3	Event Detection and Signal Generation Component	59
5.2.4	Recommendation Component	59
5.2.5	User Interface	60
5.3	Experiences and Perspectives	60
6	Future Challenges	63
	Glossary	67
