

Contents

1	Introduction to Foodborne Diseases	1
1.1	Foodborne Diseases Remain a Significant Cause of Morbidity and Mortality	1
1.2	Current Trends in Foodborne Diseases	2
1.3	Emerging Foodborne Diseases.....	4
1.4	Surveillance and Control of Foodborne Diseases	6
	References.....	10
2	Detection, Identification, and Analysis of Foodborne Pathogens	13
2.1	Introduction.....	13
2.2	Separation and Concentration of Microorganisms Present in Food	15
2.3	Traditional Culture Methods	16
2.3.1	Quantitative Culture Methods	16
2.3.2	Qualitative Culture Methods	16
2.4	Rapid and Automated Methods	17
2.4.1	Changes to Culture Methods.....	17
2.4.2	ATP Bioluminescence	18
2.4.3	Microscopic Methods.....	19
2.4.4	Immunological Detection Methods.....	20
2.4.5	Molecular Detection Methods.....	21
2.5	Conclusions About Traditional and Rapid Methods.....	23
2.6	Identification and Characterization of Microorganisms.....	24
	References.....	29
3	DNA Microarrays: Principles and Technologies	33
3.1	Introduction.....	33
3.2	DNA Microarray Principles and Technologies	34
3.2.1	Printed DNA Microarrays	35
3.2.2	In Situ-Synthesized Oligonucleotide Microarrays.....	37

- 3.2.3 Suspension Bead Arrays 38
- 3.2.4 High-Density Bead Arrays..... 39
- 3.3 Microarray Approaches and Applications 40
 - 3.3.1 mRNA Gene Expression Profiling..... 40
 - 3.3.2 Analysis of Genomic DNA 41
- 3.4 Microarray Methodologies..... 42
 - 3.4.1 Sample Preparation 43
 - 3.4.2 Hybridization 44
 - 3.4.3 Image Capture 45
- References..... 46
- 4 Bioinformatics in Support of Microarray Experiments..... 49**
 - 4.1 Introduction..... 49
 - 4.2 Microarray Probe Design..... 50
 - 4.2.1 Probe Design in Microarrays for the Detection
of Pathogens 51
 - 4.2.2 Other Aspects Related to Probe Design..... 59
 - 4.3 Microarray Data Analysis 63
 - 4.3.1 Microarray Image Analysis..... 63
 - 4.3.2 Microarray Numerical Data Analysis 68
 - 4.4 Microarray Data Management and Standards..... 81
 - 4.4.1 Microarray Data Repositories 83
 - 4.5 Microarray Quality Control and Assessment..... 86
 - 4.6 Probe Design Example Using PremierBiosoft’s
Array Designer 4.2..... 87
 - References..... 91
- 5 Applications of DNA Microarrays to Study Bacterial
Foodborne Pathogens..... 93**
 - 5.1 DNA Microarrays to Study Bacterial Foodborne Diseases 93
 - 5.2 Microarrays to Obtain Gene Expression Profilings
to Study Foodborne Pathogens 94
 - 5.2.1 Identification of Expression Profiles in Pathogens
Associated with Virulence and Pathways
of Host–Pathogen Interactions 95
 - 5.2.2 Studies of Pathogen Responses to Environmental
Changes and Food Preservation Methods 97
 - 5.2.3 Studies of Pathogen Responses and Resistance
to Antimicrobials..... 99
 - 5.3 Microarrays to Study Variations in DNA Sequence 99
 - 5.3.1 Detection of Foodborne Bacteria 99
 - 5.3.2 Genotyping of Foodborne Bacteria..... 103
 - 5.4 Microarrays to Study Protein–DNA Interactions in Bacteria 108
 - References..... 108

- 6 Future Trends** 115
 - 6.1 Other Microarray Technologies 115
 - 6.1.1 Protein Microarrays..... 115
 - 6.1.2 Polysaccharide Microarrays 117
 - 6.1.3 Phenotype Microarrays 117
 - 6.2 Biosensors 117
 - 6.3 Nanotechnology for Molecular Diagnostics 118
 - 6.4 Next-Generation High-Throughput Sequencing Technologies..... 119
 - References..... 121

- Index**..... 125
