1	Mono-Dimensional Elastic Theory of Thin Disk	1
1.1	Equilibrium Equations	1
1.2	Compatibility Equations	4
1.3	General Differential Equation for Rotating Disk Subjected to Thermal Load	8
2	Constant Thickness Rotating Disk	13
2.1	General Equations	13
2.2	Non-Rotating Annular Disk, Loaded at the Outer Radius	16
2.3	Non-Rotating Annular Disk, Loaded at the Inner Radius	18
2.4	Non-Rotating Solid Disk, Loaded at the Outer Radius	20
2.5	Rotating Annular Disk	22
2.5.1	Example 1	29
2.5.2	Example 2	30
2.5.3	Example 3	35
2.5.4	Example 4	39
2.5.5	Example 5	41
2.6	Rotating Solid Disk	44
2.7	Constant Thickness Disk Subjected to Angular Acceleration	47
2.8	Summary of Results for Constant Thickness Disk Loaded at the Inner and Outer Radius and Subjected to Centrifugal Load	48
3	Thermal Loads and Fictitious Density Variation Along the Radius	51
3.1	Annular Disk, Subjected to Thermal Load	51
3.1.1	Function T Given by an n -th Degree Function	52
3.1.2	Function T Given by an n Degree Polynomial	54
3.1.3	General Function T	56
3.1.4	Example	59
3.2	Solid Disk, Subjected to Thermal Load	60
3.2.1	Function T Given by an n -th Degree Function	60
3.2.2	Function T Given by an n Degree Polynomial	61
3.2.3	General Function T	62

- 3.3 Summary of Results for Constant Thickness Disk Subjected to Thermal Load 64
- 3.4 Constant Thickness Disk Subjected to Centrifugal and Thermal Loads 64
- 3.5 Stresses in Rotating Disks Having a Fictitious Density Variation Along the Radius 67
- 4 Hyperbolic Disks 71**
 - 4.1 Annular Disk, Subjected to Centrifugal Load 74
 - 4.2 Non-Rotating Annular Disk, Loaded at the Outer Radius 76
 - 4.3 Non-Rotating Annular Disk, Loaded at the Inner Radius 77
 - 4.4 Rotating Annular Disk 78
 - 4.4.1 Example 78
 - 4.5 Annular Disk, Subjected to Thermal Load 81
 - 4.5.1 Example 87
- 5 Disk of Uniform Strength 89**
 - 5.1 Profile Definition 89
 - 5.2 Technical Solutions 93
 - 5.3 Crown Ring Design 96
 - 5.4 Example 99
- 6 Conical Disk 103**
 - 6.1 Conical Profile Geometry and General Differential Equations 103
 - 6.2 Rotating Conical Disk Having Constant Density 107
 - 6.2.1 Particular Integral and Corresponding Stress and Strain State 107
 - 6.2.2 Solution of Homogeneous Differential Equation and Corresponding Stress and Strain State 109
 - 6.2.3 General Integral and Corresponding Stress and Strain State 116
 - 6.3 Conical Disk Having Constant Density Subjected to Thermal Load 117
 - 6.4 Rotating Disk Having Density Variation on Radius 121
 - 6.5 Conical Disk with Density Variation Subjected to Centrifugal and Thermal Loads 124
 - 6.6 Examples of Conical Disks 125
 - 6.6.1 Rotating Solid Conical Disk with Apex Singularity and Having Constant Density 125
 - 6.6.2 Rotating Annular Conical Disk with Apex Singularity and Having Constant Density 127
 - 6.6.3 Rotating Solid Conical Disk with $r_e < R$ and Having Constant Density 127
 - 6.6.4 Rotating Annular Conical Disk Without Singularities ($r_i > 0$ and $r_e < R$) and Having Constant Density 129
 - 6.6.5 Rotating Conical Disk with Hub and Crown Ring and Having Constant Density 129

- 6.6.6 Conical Disk Without Singularities and Subjected to Temperature Gradient 130
- 6.6.7 Conical Disk Without Singularities and Having Density Variation on Radius 131
- 6.6.8 Rotating Conical Disk Without Singularities, with Density Variation on Radius and Subjected to Temperature Gradient 133
- 7 Non-Linearly Variable Thickness Disks 135**
 - 7.1 General Differential Equations and Variable Thickness Profile Geometry 135
 - 7.2 Rotating Disk Having Constant Density 142
 - 7.2.1 Particular Integral and Corresponding Stress and Strain State 142
 - 7.2.2 Solution of Homogeneous Differential Equation and Corresponding Stress and Strain State 145
 - 7.2.3 General Integral and Corresponding Stress and Strain State 151
 - 7.3 Non-Linearly Variable Thickness Disks Having Constant Density and Subjected to Thermal Load 151
 - 7.4 Non-Linearly Variable Thickness Disks Having Density Variation on Radius 155
 - 7.5 Non-Linearly Variable Thickness Disks with Density Variation and Subjected to Thermal and Centrifugal Loads 160
 - 7.6 Examples of Non-Linear Variable Thickness Disks 161
 - 7.6.1 Rotating Solid Disk with Apex Singularity and Having Constant Density 161
 - 7.6.2 Rotating Annular Disk with Apex Singularity and Having Constant Density 162
 - 7.6.3 Rotating Solid Disks with $r_c < R$ and Having Constant Density 163
 - 7.6.4 Rotating Annular Disks with $r_c < R$ and Having Constant Density 165
 - 7.6.5 Rotating Disks with Hub and Crown Ring and Having Constant Density 165
 - 7.6.6 Annular Disks Having Constant Density and Subjected to Temperature Gradient 168
 - 7.6.7 Rotating Annular Disks Having Density Variation on Radius 168
 - 7.6.8 Rotating Annular Disks Having Density Variation on Radius and Subjected to Thermal Load 172
 - 7.6.9 Comparing Various Disk Types 172
 - 7.7 Non-Linearly Variable Thickness Disks Subjected to Angular Acceleration 174

- 8 Disk Having Arbitrary Profile 177**
 - 8.1 Timoshenko-Grammel’s Method 178
 - 8.1.1 Example 184
 - 8.2 Manson’s Method 185
 - 8.2.1 Example 191

- 9 Design of Rotating Disks and Stress Concentrations 193**
 - 9.1 Failure Criteria 193
 - 9.2 General Considerations on the Use of Failure Criteria 199
 - 9.3 Effects of Stress Concentrations 201

- 10 Stress Analysis of Rotating Cylinders in the Linear Elastic Field 207**
 - 10.1 Principles and General Equations 207
 - 10.2 Circular Cylindrical Body with Clamped Ends or Indefinitely Extended in the Direction of its Axis Subjected to Centrifugal and Thermal Loads 211
 - 10.2.1 Circular Cylindrical Body with Clamped Ends or Indefinitely Extended in the Direction of its Axis Subjected to Centrifugal Load 216
 - 10.2.2 Circular Cylindrical Body with Clamped Ends or Indefinitely Extended in the Direction of its Axis Subjected to Thermal Load 218
 - 10.3 Circular Cylindrical Body of Finite Length with Free Ends Subjected to Centrifugal and Thermal Loads 228
 - 10.3.1 Circular Cylindrical Body of Finite Length with Free Ends Subjected to Centrifugal Load 232
 - 10.3.2 Circular Cylindrical Body of Finite Length with Free Ends Subjected to Thermal Load 238
 - 10.4 Edge Effect in a Circular Cylindrical Body of Finite Length with Free Ends Subjected to Thermal Load 246
 - 10.5 Solid Cylindrical Body of Finite Length and with Free Ends, Subjected to Transient Thermal Load 249

- 11 Stress Analysis in Rotating Disks Loaded Beyond Yielding: Non-Hardening Materials 253**
 - 11.1 Basic Hypotheses and Their Limitations in Disks Made of Non-Hardening Materials 253
 - 11.2 Yield Criteria 255
 - 11.3 Annular Disk 257
 - 11.3.1 Elastic Limit Angular Velocity 257
 - 11.3.2 Elastic-Plastic Analysis of Rotating Annular Disks 259
 - 11.3.3 Residual Stresses 262
 - 11.3.4 Example 265

11.4	Solid Disk	266
11.4.1	Elastic Limit Angular Velocity	266
11.4.2	Elastic-Plastic Analysis of Rotating Solid Disks	267
11.4.3	Residual Stresses	268
11.5	Bursting Angular Speed	271
12	Stress Analysis in Rotating Disks Loaded Beyond Yielding: Hardening Materials	273
12.1	General	273
12.2	Millenson-Manson’s Method	275
12.2.1	Effect of Plastic Flow	277
12.2.2	Effect of Previous Plastic History	279
12.2.3	Effect of Creep	281
12.3	Analytical Method	282
12.4	Elastic Analysis	290
12.4.1	Solution of Homogeneous Differential Equation	291
12.4.2	Particular Integral	298
12.4.3	General Solution and Corresponding Stress and Strain State	298
12.4.4	Boundary Conditions and Integration Constants	300
12.4.5	Examples	301
12.5	Elastic-Plastic Analysis	302
12.5.1	Theoretical–Numerical Solution Case Studies and FEM Tests	307
12.5.2	Residual and Service Stresses	309
12.6	Design-Related Use of Plasticization and Limit-Design Factor	311
13	Appendices	317
13.1	Appendix A: Rotating Bars, Paddles and Blades	317
13.2	Appendix B: In-Depth Analysis of the Solution of the Hypergeometric Differential Equation	323
13.3	Appendix C: The Finite Element Method for Elastic-Plastic Problems	326
