<i>Preface</i>	<i>xi</i>
1 Direct and resonant double photoionization: from atoms to solids	1
LORENZO AVALDI AND GIOVANNI STEFANI	
1.1 Introduction	1
1.2 Direct double photoionization	3
1.3 Indirect double photoionization	21
1.4 Conclusions	40
2 The application of propagating exterior complex scaling to atomic collisions	48
PHILIP L. BARTLETT AND ANDRIS T. STELBOVICS	
2.1 Introduction	48
2.2 Introduction to exterior complex scaling	49
2.3 Application of ECS to electron–hydrogen scattering	53
2.4 Scattering in electron–hydrogen system	58
2.5 Exterior complex scaling for electron–helium scattering	61
2.6 Summary and outlook for the future	69
3 Fragmentation of molecular-ion beams in intense ultrashort laser pulses	72
ITZIK BEN-ITZHAK	
3.1 Introduction	72
3.2 Experimental method	75
3.3 Benchmark molecules	82
3.4 Complex and/or unique molecular ions	87
3.5 Summary and outlook	94

vi	<i>Contents</i>	
4	Atoms with one and two active electrons in strong laser fields	98
	I. A. IVANOV AND A. S. KHEIFETS	
4.1	Introduction	98
4.2	Theoretical model	99
4.3	Two-photon double ionization of helium	101
4.4	DC-assisted double photoionization of He and H [−]	103
4.5	Strong-field ionization of lithium and hydrogen	105
4.6	High harmonics generation	108
4.7	Time delay in atomic photoionization	110
5	Experimental aspects of ionization studies by positron and positronium impact	116
	G. LARICCHIA, D. A. COOKE, Á. KÖVÉR AND S. J. BRAWLEY	
5.1	Introduction	116
5.2	Integral cross sections for positron impact ionization	117
5.3	Differential cross sections for positron impact ionization	122
5.4	Positronium-induced fragmentation	129
5.5	Conclusions and outlook	133
6	(e,2e) spectroscopy using fragmentation processes	137
	JULIAN LOWER, MASAKAZU YAMAZAKI AND MASAHIKO TAKAHASHI	
6.1	Introduction	137
6.2	Background	139
6.3	Theory	142
6.4	Electron momentum spectroscopy results	143
6.5	Low-energy (e,2e) results	147
6.6	Conclusion	152
7	A coupled pseudostate approach to the calculation of ion–atom fragmentation processes	155
	M. MCGOVERN, H. R. J. WALTERS AND COLM T. WHELAN	
7.1	Introduction	155
7.2	Theory	155
7.3	Antiproton-induced ionization	160
8	Electron impact ionization using (e,2e) coincidence techniques from threshold to intermediate energies	164
	ANDREW JAMES MURRAY	
8.1	Introduction	164
8.2	Experimental methods and techniques	171
8.3	Theoretical models	181

<i>Contents</i>	vii
8.4 Atomic targets	186
8.5 Molecular targets	196
8.6 Experiments from laser-aligned atoms	200
8.7 Future work and conclusions	203
9 (e,2e) processes on atomic inner shells	207
COLM T. WHELAN	
9.1 (e,2e) processes – an overview	207
9.2 Non-relativistic theory	208
9.3 The distorted wave Born approximation	212
9.4 Inner-shell ionization of heavy metal targets at relativistic impact energies	221
9.5 General features of the cross section	228
9.6 Special features	230
10 Spin-resolved atomic (e,2e) processes	243
JULIAN LOWER AND COLM T. WHELAN	
10.1 Introduction	243
10.2 Experimental considerations	245
10.3 Low-Z targets and low electron impact energies	247
10.4 High-Z targets and low electron impact energies	249
10.5 High-Z targets and high electron impact energies	254
10.6 Longitudinally polarized electrons	260
10.7 Conclusion	265
<i>Index</i>	268
