

Contents

1	Basic Characteristics of Error Distribution; Histograms	1
1.1	Introductory Remarks; Histograms	1
1.2	The Average of a Sample of Measurements	3
1.3	Dispersion Measures in Error Analysis	4
1.4	Cumulative Frequency Distribution	6
1.5	Examples of Empirical Distributions	7
1.6	Parameters Obtained from the Measured Data and Their Theoretical Values	9
	References	13
2	Random Variables and Probability; Normal Distribution	15
2.1	Probability and Random Variables	15
2.2	The Cumulative Distribution Function; the Probability Density Function	20
2.3	Moments	23
2.4	The Normal Probability Distribution	26
2.5	Two-dimensional Gravity Flow of Granular Material	38
	References	47
3	Probability Distributions and Their Characterizations	49
3.1	The Characteristic Function of a Distribution	49
3.2	Constants Characterizing the Random Variables	51
3.3	Deterministic Functions of Random Variables	56
3.4	Some Other One-dimensional Distributions	57
3.4.1	Discrete Probability Distributions	57
3.4.2	Continuous Probability Distributions	60
3.4.3	Remarks on Other Probability Distributions	75
3.4.4	Measures of Deviation from the Normal Distribution	77
3.5	Approximate Methods for Constructing a Probability Density Function	79
3.6	Multi-dimensional Probability Distributions	81
	References	89

4	Functions of Independent Random Variables	91
4.1	Basic Relations	91
4.2	Simple Examples of Applications	95
4.3	Examples of Applications in Non-direct Measurements	96
4.4	Remarks on Applications in the Calculus of Tolerance Limits	98
4.5	Statical Analogy in the Analysis of Complex Dimension Nets	100
	References	105
5	Two-dimensional Distributions	107
5.1	Introductory remarks	107
5.2	Linear Regression of Experimental Observations	112
5.2.1	Nonparametric Regression	114
5.2.2	The Method of Least Squares for Determining the Linear Regression Line	116
5.2.3	The Method of Moments for Determining the Linear Regression Line	118
5.3	Linear Correlation Between Experimentally Determined Quantities	121
5.4	Two-dimensional Continuous Random Variables	125
5.5	The Two-dimensional Normal Distribution	128
5.5.1	The Case of Independent Random Variables	128
5.5.2	The Circular Normal Distribution	130
5.5.3	Three-dimensional Gravity Flow of Granular Media	133
5.5.4	The Case of Dependent Random Variables	140
	References	146
6	Two-dimensional Functions of Independent Random Variables	149
6.1	Basic Relations	149
6.2	The Rectangular Distribution of Independent Random Variables	153
6.2.1	Analytical Method for Determining Two-dimensional Tolerance Limits Polygons	153
6.2.2	Statistical Analogy Method for Determining Two-dimensional Tolerance Limit Polygons	157
6.2.3	Graphical Method for Determining Two-dimensional Tolerance Limits Polygon. Williot's Diagram	161
6.3	The Normal Distribution of Independent Random Variables	165
6.4	Indirect Determination of the Ellipses of Probability Concentration	169
	References	173
7	Three-dimensional Distributions	175
7.1	General Remarks	175
7.2	Continuous Three-dimensional Random Variables	177
7.3	The Three-dimensional Normal Distribution	180
7.3.1	Independent Random Variables	180
7.3.2	The Spherical Normal Distribution	181
7.3.3	The Case of Dependent Random Variables	183
	References	186

8	Three-dimensional Functions of Independent Random Variables	189
8.1	Basic Relations	189
8.2	The Rectangular Distribution of Independent Random Variables	193
8.3	The Normal Distribution of Independent Random Variables	201
8.4	Indirect Determination of the Ellipsoids of Probability	
	Concentration	205
	References	209
9	Problems Described by Implicit Equations	211
9.1	Introduction	211
9.2	Statistically Independent Random Variables	213
9.2.1	Two Independent Random Variables	213
9.2.2	A Function of Independent Random Variables	215
9.3	Statistically Dependent Random Variables	219
9.3.1	Two Dependent Random Variables	219
9.3.2	The Case of Gaussian Random Variables	221
9.3.3	More Random Variables: the Rosenblatt Transformation	224
9.4	Computational Problems	227
	References	230
10	Useful Definitions and Facts of Probability Theory for Further Reading	231
10.1	Statistical Linearization	231
10.2	Multi-dimensional Regression	234
10.3	Limit Theorems of Probability Theory	236
10.3.1	Concepts of Probabilistic Convergence	236
10.3.2	The Law of Large Numbers	237
10.3.3	The Central Limit Theorems	238
10.4	Elements of Mathematical Statistics	239
10.4.1	Estimators	240
10.4.2	Testing Statistical Hypotheses	241
10.4.3	Confidence Intervals	242
10.5	Bibliographical Notes for Future Studies	243
	References	244

Error Analysis with Applications in Engineering

Kotulski, Z.A.; Szczepinski, W.

2010, X, 270 p., Hardcover

ISBN: 978-90-481-3569-1
