

Contents

1	Basic Statements	1
1.1	The Formulation of Boundary Value and Initial Boundary Value Problems in the Theory of Diffraction Gratings	1
1.1.1	Fundamental Equations	1
1.1.2	Domains of Analysis, Boundary and Initial Conditions	3
1.1.3	Time Domain: Initial Boundary Value Problems	5
1.1.4	Frequency Domain: Boundary Value Problems	11
1.2	The General Physical Picture: Principal Definitions and Consequences from Conservation Laws and Reciprocity Theorems	15
1.2.1	The Diffraction Problems for Plane Waves	15
1.2.2	The Simplest Physical Consequences from the Poynting Theorem and the Lorentz Lemma	19
1.3	The Spectral Theory of Gratings	22
1.3.1	Introduction	22
1.3.2	The Grating as an Open Periodic Resonator	24
1.3.3	The Grating as an Open Periodic Waveguide	28
1.3.4	Some Physical Results of Spectral Theory	33
2	Analytic Regularization Methods	43
2.1	General Description and Classification of the Analytic Regularization Methods: History, Provenance, and Survey	43
2.2	The Riemann–Hilbert Problem Method and Its Generalization	56
2.2.1	Classical Dual Series Equations and the Riemann–Hilbert Problem	57
2.2.2	Classical Dual Series Equations with “Matrix Perturbation”	63
2.2.3	Dual Series Equations with the Nonunit Coefficient of Conjugation	73
2.2.4	The System of Dual Series Equations and Riemann–Hilbert Vector Problem	80

2.3	Inversion of Convolution-Type Matrix Operators in System of Equations in the Mode Matching Technique	88
2.3.1	Lamellar Gratings: Systems of First-Kind Equations and Analytic Regularization of the Problem . .	90
2.3.2	Matrix Scheme of Analytic Regularization Procedure . .	96
2.4	Electromagnetic Wave Diffraction by Gratings in Presence of a Chiral Isotropic Medium	102
2.4.1	Field Presentation in Chiral Medium	104
2.4.2	Formulation of the Problem	106
2.4.3	The Systems of Dual Series Equations	107
2.4.4	An Algebraic System of the Second Kind	110
2.4.5	Numerical Analysis for Grating and Chiral Half-Space . .	115
2.4.6	Strip Grating with Layered Medium	120
2.4.7	Electromagnetic Properties of a Strip Grating with Layered Medium in the Resonant Frequency Range . . .	122
2.5	Resonant Scattering of Electromagnetic Waves by Gratings and Interfaces Between Anisotropic Media and Metamaterials	130
2.5.1	Resonant Wave Scattering by a Strip Grating Loaded with a Metamaterial Layer	131
2.5.2	The Plane-Wave Diffraction from a Strip Grating with Anisotropic Medium	145
2.6	Diffraction of Quasi-Periodic Waves by Obstacles with Cylindrical Periodical Wavy Surfaces	155
2.6.1	The Dirichlet Diffraction Problem	158
2.6.2	Reduction of the Dirichlet BVP to the Integral Equations	158
2.6.3	Investigation of the Differential Properties of the Integral Equation Kernel	161
2.6.4	Additive Splitting of the Integral Equation Kernel into a Sum of Main Singular Part and Some More Smooth Function	164
2.6.5	Reduction of the Integral Equation to an Infinite System of Linear Algebraic Equations of the First Kind .	165
2.6.6	Construction of an Infinite System of Linear Algebraic Equations of the Second Kind	167
2.6.7	The Neumann Diffraction Problem	167
3	C-Method: From the Beginnings to Recent Advances	173
3.1	Introduction	173
3.2	Classical C-Method	174
3.2.1	Modal Equations in Cartesian Coordinates and Quasi-periodic Green Function	175
3.2.2	New Coordinate System	177
3.2.3	Modal Equation in the Translation Coordinate System . .	178
3.3	Diffraction of a Plane Wave by a Modulated Surface Grating . .	180

3.3.1	Formulation of the Problem	180
3.3.2	Tangential Component of a Vector Field at a Coordinate Surface	182
3.3.3	Boundary Conditions	183
3.4	Adaptive Spatial Resolution	184
3.4.1	Trapezoidal Grating	185
3.4.2	Lamellar Grating and Adaptive Spatial Resolution	188
3.5	Curved Strip Gratings	192
3.6	Several Issues of Spectral Theory Relevant to C-Method Formalism	198
3.6.1	The Diffraction Problem Formulation for Real-Valued Frequencies	199
3.6.2	Diffraction Problem for Complex-Valued Frequencies . .	201
3.6.3	Spectral Problem and Its Solution: Some Physical Results	204
4	Modeling and Analysis of Transients in Periodic Structures: Fully Absorbing Boundaries for 2-D Open Problems	211
4.1	Infinite Gratings: Exact Absorbing Conditions for Plane Parallel Floquet Channel	212
4.1.1	Transformation of Evolutionary Basis of a Signal in a Regular Floquet Channel	213
4.1.2	Nonlocal Absorbing Conditions	216
4.1.3	Local Absorbing Conditions	219
4.1.4	The Problems of Large and Remote Field Sources	224
4.2	Finite Gratings: Exact Conditions for Rectangular Artificial Boundaries	227
4.2.1	Statement of the Problems	227
4.2.2	Truncation of the Analysis Domain to a Band	230
4.2.3	The Corner Points: Proper Formulation of the Inner Initial Boundary Value Problems in the Exact Local Absorbing Conditions	232
4.2.4	The Far Zone Problem: Radiation Conditions for Outgoing Cylindrical Waves and Exact Conditions for Artificial Boundaries in Polar Coordinates	236
4.3	Time Domain Methods in the Study of Gratings and Compact Grating Structures as Open Resonators	239
4.3.1	Spatial–Frequency Representations of Transient Fields and Preliminary Qualitative Analysis	239
4.3.2	A Choice of the Field Sources in Numerical Experiments	246
4.3.3	Compact Grating Structures	250
4.4	Infinite Gratings: Resonant Wave Scattering	258
4.4.1	Electrodynamical Characteristics of Gratings	259
4.4.2	Semitransparent Gratings	262
4.4.3	Reflective Gratings	269

4.4.4	Gratings in a Pulsed Wave Field	277
4.5	2-D Models of Compact Grating Structures: Spatio-frequency and Spatio-temporal Field Transformations . .	285
4.5.1	Basic Definitions and Numerical Tests of New Exact Conditions	285
4.5.2	Finite and Infinite Periodic Structures: Similarities and Differences	291
4.5.3	Radiating Apertures with Quasi-periodic Field Structure	296
4.5.4	Resonant Antennas with Semitransparent Grating Mirrors	305
4.5.5	2-D Models of Phased Arrays	317
5	Finite Scale Homogenization of Periodic Bianisotropic Structures .	335
5.1	Fundamental Ideas	336
5.2	Some Mathematical Properties of Maxwell's Operator	338
5.2.1	Vacuum Case	340
5.2.2	Material Case	341
5.2.3	Lossless Media: Eigenvalue Decomposition	342
5.2.4	Dispersive Media: Singular Value Decomposition	344
5.3	Estimates of the Eigenvalues and Singular Values in the Low-Frequency Limit	345
5.4	Reduced Number of Degrees of Freedom in the Low-Frequency Limit	349
5.5	Computation of Homogenized Parameters	353
5.5.1	Lossless Case	354
5.5.2	Dispersive Case	355
5.6	Results for Sample Structures	356
5.6.1	Laminated Media	356
5.6.2	Validity of Classical Homogenization	358
5.6.3	Results for a Chiral Structure	361
5.7	Conclusions	365
	Appendix: The List of the Symbols and Abbreviations	367
