

Contents

1	The Physical Brownian Motion: Diffusion And Noise	1
1.1	Einstein's theory of diffusion	1
1.2	The velocity process and Langevin's approach	5
1.3	The displacement process	10
1.4	Classical theory of noise	13
1.5	An application: Johnson noise	16
1.6	Linear systems	21
2	The Probability Space of Brownian Motion	25
2.1	Introduction	25
2.2	The space of Brownian trajectories	27
2.2.1	The Wiener measure of Brownian trajectories	37
2.2.2	The MBM in $\mathbb{R}^d$	44
2.3	Constructions of the MBM	46
2.3.1	The Paley–Wiener construction of the Brownian motion	46
2.3.2	P. Lévy's method and refinements	49
2.4	Analytical and statistical properties of Brownian paths	52
2.4.1	The Markov property of the MBM	55
2.4.2	Reflecting and absorbing walls	56
2.4.3	MBM and martingales	60
3	Itô Integration and Calculus	63
3.1	Integration of white noise	63
3.2	The Itô, Stratonovich, and other integrals	66
3.2.1	The Itô integral	66
3.2.2	The Stratonovich integral	68
3.2.3	The backward integral	73
3.3	The construction of the Itô integral	74
3.4	The Itô calculus	81
4	Stochastic Differential Equations	92
4.1	Itô and Stratonovich SDEs	93
4.2	Transformations of Itô equations	97

4.3	Solutions of SDEs are Markovian	101
4.4	Stochastic and partial differential equations	104
4.4.1	The Andronov–Vitt–Pontryagin equation	109
4.4.2	The exit distribution	111
4.4.3	The PDF of the FPT	114
4.5	The Fokker–Planck equation	119
4.6	The backward Kolmogorov equation	124
4.7	Appendix: Proof of Theorem 4.1.1	125
4.7.1	Continuous dependence on parameters	131
5	The Discrete Approach and Boundary Behavior	133
5.1	The Euler simulation scheme and its convergence	133
5.2	The pdf of Euler’s scheme in $\mathbb{R}$ and the FPE	137
5.2.1	Unidirectional and net probability flux density	145
5.3	Boundary behavior of diffusions	150
5.4	Absorbing boundaries	151
5.4.1	Unidirectional flux and the survival probability	155
5.5	Reflecting and partially reflecting boundaries	157
5.5.1	Total and partial reflection in one dimension	158
5.5.2	Partially reflected diffusion in higher dimensions	165
5.5.3	Discontinuous coefficients	168
5.5.4	Diffusion on a sphere	168
5.6	The Wiener measure induced by SDEs	169
5.7	Annotations	173
6	The First Passage Time of Diffusions	176
6.1	The FPT and escape from a domain	176
6.2	The PDF of the FPT	180
6.3	The exit density and probability flux density	184
6.4	The exit problem in one dimension	185
6.4.1	The exit time	191
6.4.2	Application of the Laplace method	194
6.5	Conditioning	197
6.5.1	Conditioning on trajectories that reach A before B	198
6.6	Killing measure and the survival probability	202
7	Markov Processes and their Diffusion Approximations	207
7.1	Markov processes	207
7.1.1	The general form of the master equation	211
7.1.2	Jump-diffusion processes	218
7.2	A semi-Markovian example: Renewal processes	222
7.3	Diffusion approximations of Markovian jump processes	230
7.3.1	A refresher on solvability of linear equations	230
7.3.2	Dynamics with large and fast jumps	231

7.3.3	Small jumps and the Kramers–Moyal expansion	236
7.3.4	An application to Brownian motion in a field of force	241
7.3.5	Dynamics driven by wideband noise	244
7.3.6	Boundary behavior of diffusion approximations	247
7.4	Diffusion approximation of the MFPT	249
8	Diffusion Approximations to Langevin’s Equation	257
8.1	The overdamped Langevin equation	257
8.1.1	The overdamped limit of the GLE	259
8.2	Smoluchowski expansion in the entire space	265
8.3	Boundary conditions in the Smoluchowski limit	268
8.3.1	Appendix	275
8.4	Low-friction asymptotics of the FPE	276
8.5	The noisy underdamped forced pendulum	285
8.5.1	The noiseless underdamped forced pendulum	286
8.5.2	Local fluctuations about a nonequilibrium steady state	290
8.5.3	The FPE and the MFPT far from equilibrium	295
8.5.4	Application to the shunted Josephson junction	299
8.6	Annotations	301
9	Large Deviations of Markovian Jump Processes	302
9.1	The WKB structure of the stationary pdf	302
9.2	The mean time to a large deviation	308
9.3	Asymptotic theory of large deviations	322
9.3.1	More general sums	328
9.3.2	A central limit theorem for dependent variables	333
9.4	Annotations	337
10	Noise-Induced Escape From an Attractor	339
10.1	Asymptotic analysis of the exit problem	339
10.1.1	The exit problem for small diffusion with the flow	343
10.1.2	Small diffusion against the flow	348
10.1.3	The MFPT of small diffusion against the flow	352
10.1.4	Escape over a sharp barrier	353
10.1.5	The MFPT to a smooth boundary and the escape rate	356
10.1.6	The MFPT eigenvalues of the Fokker–Planck operator	359
10.2	The exit problem in higher dimensions	359
10.2.1	The WKB structure of the pdf	361
10.2.2	The eikonal equation	362
10.2.3	The transport equation	364
10.2.4	The characteristic equations	365
10.2.5	Boundary layers at noncharacteristic boundaries	366
10.2.6	Boundary layers at characteristic boundaries in the plane	369
10.2.7	Exit through noncharacteristic boundaries	371
10.2.8	Exit through characteristic boundaries in the plane	376

10.2.9	Kramers' exit problem	378
10.3	Activated escape in Langevin's equation	382
10.3.1	The separatrix in phase space	382
10.3.2	Kramers' exit problem at high and low friction	384
10.3.3	The MFPT to the separatrix Γ	386
10.3.4	Uniform approximation to Kramers' rate	387
10.3.5	The exit distribution on the separatrix	389
10.4	Annotations	397
11	Stochastic Stability	399
11.1	Stochastic stability of nonlinear oscillators	403
11.1.1	Underdamped pendulum with parametric noise	404
11.1.2	The steady-state distribution of the noisy oscillator	407
11.1.3	First passage times and stability	410
11.2	Stabilization with oscillations and noise	417
11.2.1	Stabilization by high-frequency noise	417
11.2.2	The generating equation	418
11.2.3	The correlation-free equation	419
11.2.4	The stability of (11.72)	421
11.3	Stability of columns with noisy loads	425
11.3.1	A thin column with a noisy load	426
11.3.2	The double pendulum	429
11.3.3	The damped vertically loaded double pendulum	434
11.3.4	A tangentially loaded double pendulum (follower load)	436
11.3.5	The N -fold pendulum and the continuous column	438
	Bibliography	442
	Index	459

Theory and Applications of Stochastic Processes

An Analytical Approach

Schuss, Z.

2010, XVIII, 470 p., Hardcover

ISBN: 978-1-4419-1604-4
