
Contents

Preface	vii
Introduction	1
1 First-Order Deformations	5
1. The Hilbert Scheme	5
2. Structures over the Dual Numbers	9
3. The T^i Functors	18
4. The Infinitesimal Lifting Property	26
5. Deformations of Rings	35
2 Higher-Order Deformations	45
6. Subschemes and Invertible Sheaves	45
7. Vector Bundles and Coherent Sheaves	53
8. Cohen–Macaulay in Codimension Two	58
9. Complete Intersections and Gorenstein in Codimension Three .	73
10. Obstructions to Deformations of Schemes	78
11. Obstruction Theory for a Local Ring	85
12. Dimensions of Families of Space Curves	88
13. A Nonreduced Component of the Hilbert Scheme	91
3 Formal Moduli	99
14. Plane Curve Singularities	100
15. Functors of Artin Rings	106
16. Schlessinger’s Criterion	111
17. Hilb and Pic are Pro-representable	118
18. Miniversal and Universal Deformations of Schemes	120
19. Versal Families of Sheaves	128
20. Comparison of Embedded and Abstract Deformations	131
21. Algebraization of Formal Moduli	138
22. Lifting from Characteristic p to Characteristic 0	144

4	Global Questions	149
23.	Introduction to Moduli Questions	150
24.	Some Representable Functors	156
25.	Curves of Genus Zero	164
26.	Moduli of Elliptic Curves	167
27.	Moduli of Curves	177
28.	Moduli of Vector Bundles.....	188
29.	Smoothing Singularities	199
