

Contents

1	Structures of Spacetime	1
1.1	Properties of the Vacuum	1
1.2	Measuring Rods	9
1.3	Limit Speed	13
1.4	Quantum Teleportation and Bell's Inequality	15
2	Time and Distance	21
2.1	Theorem of Minkowski	21
2.2	Addition of Velocities	26
2.3	Time Dilation	28
2.4	Length Contraction	33
2.5	Doppler Effect	35
2.6	Spacetime Coordinates	38
2.7	Scalar Product and Length Squared	40
2.8	Perspectives	44
3	Transformations	49
3.1	Lorentz Transformation of Coordinates	49
3.2	Perception	54
3.3	Energy and Momentum	59
4	Relativistic Particles	67
4.1	Clocks on Worldlines	67
4.2	Free Particles	70
4.3	Action Principle	71
4.4	Symmetries and Conserved Quantities	77
4.5	Interlude in Linear Algebra	86

5	Electrodynamics	91
5.1	Covariant Maxwell Equations	91
5.2	Energy and Momentum	94
5.3	The Electrodynamic Potentials	98
5.4	Wave Equation	104
5.5	Action Principle and Noether's Theorems.	113
5.6	Charged Point Particle	119
6	The Lorentz Group	123
6.1	Rotations	123
6.2	Lorentz Transformations.	126
6.3	The Rotation Group $SU(2)/\mathbb{Z}_2$	131
6.4	The Group $SL(2, \mathbb{C})$	133
6.5	Möbius Transformations of Light Rays	136
