

Adsorption Technology in Water Treatment

Fundamentals, Processes, and Modelling

Bearbeitet von
Eckhard Worch

1. Auflage 2012. Buch. XII, 344 S. Hardcover

ISBN 978 3 11 024022 1

Format (B x L): 17 x 24 cm

Gewicht: 719 g

[Weitere Fachgebiete > Technik > Verfahrenstechnik, Chemieingenieurwesen, Lebensmitteltechnik > Chemische Reaktionstechnik \(incl. Katalyse, Elektrolyse\)](#)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text 'beck-shop.de' in a bold, red, sans-serif font. Above the 'i' in 'shop' are three red dots of increasing size. Below the main text, the words 'DIE FACHBUCHHANDLUNG' are written in a smaller, red, all-caps, sans-serif font.

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Preface	xi
1 Introduction	1
1.1 Basic concepts and definitions	1
1.1.1 Adsorption as a surface process	1
1.1.2 Some general thermodynamic considerations	2
1.1.3 Adsorption versus absorption	3
1.1.4 Description of adsorption processes: The structure of the adsorption theory	3
1.2 Engineered adsorption processes in water treatment	5
1.2.1 Overview	5
1.2.2 Drinking water treatment	6
1.2.3 Wastewater treatment	6
1.2.4 Hybrid processes in water treatment	7
1.3 Natural sorption processes in water treatment	8
2 Adsorbents and adsorbent characterization	11
2.1 Introduction and adsorbent classification	11
2.2 Engineered adsorbents	12
2.2.1 Activated carbon	12
2.2.2 Polymeric adsorbents	15
2.2.3 Oxidic adsorbents	16
2.2.4 Synthetic zeolites	17
2.3 Natural and low-cost adsorbents	18
2.4 Geosorbents in environmental compartments	19
2.5 Adsorbent characterization	20
2.5.1 Densities	20
2.5.2 Porosities	22
2.5.3 External surface area	23
2.5.4 Internal surface area	25
2.5.5 Pore-size distribution	28
2.5.6 Surface chemistry	34
3 Adsorption equilibrium I: General aspects and single-solute adsorption ...	41
3.1 Introduction	41
3.2 Experimental determination of equilibrium data	42
3.2.1 Basics	42

3.2.2	Practical aspects of isotherm determination	45
3.3	Isotherm equations for single-solute adsorption	47
3.3.1	Classification of single-solute isotherm equations	47
3.3.2	Irreversible isotherm and one-parameter isotherm	48
3.3.3	Two-parameter isotherms	49
3.3.4	Three-parameter isotherms	55
3.3.5	Isotherm equations with more than three parameters	58
3.4	Prediction of isotherms	59
3.5	Temperature dependence of adsorption	64
3.6	Slurry adsorber design	67
3.6.1	General aspects	67
3.6.2	Single-stage adsorption	69
3.6.3	Two-stage adsorption	72
3.7	Application of isotherm data in kinetic or breakthrough curve models	74
4	Adsorption equilibrium II: Multisolute adsorption	77
4.1	Introduction	77
4.2	Experimental determination of equilibrium data	78
4.3	Overview of existing multisolute adsorption models	80
4.4	Multisolute isotherm equations	81
4.5	The ideal adsorbed solution theory (IAST)	84
4.5.1	Basics of the IAST	84
4.5.2	Solution to the IAST for given equilibrium concentrations	88
4.5.3	Solution to the IAST for given initial concentrations	90
4.6	The pH dependence of adsorption: A special case of competitive adsorption	94
4.7	Adsorption of natural organic matter (NOM)	98
4.7.1	The significance of NOM in activated carbon adsorption	98
4.7.2	Modeling of NOM adsorption: The fictive component approach (adsorption analysis)	100
4.7.3	Competitive adsorption of micropollutants and NOM	104
4.8	Slurry adsorber design for multisolute adsorption	111
4.8.1	Basics	111
4.8.2	NOM adsorption	112
4.8.3	Competitive adsorption of micropollutants and NOM	113
4.8.4	Nonequilibrium adsorption in slurry reactors	118
4.9	Special applications of the fictive component approach	120

5	Adsorption kinetics	123
5.1	Introduction	123
5.2	Mass transfer mechanisms	123
5.3	Experimental determination of kinetic curves	124
5.4	Mass transfer models	127
5.4.1	General considerations	127
5.4.2	Film diffusion	129
5.4.3	Surface diffusion	136
5.4.4	Pore diffusion	143
5.4.5	Combined surface and pore diffusion	149
5.4.6	Simplified intraparticle diffusion model (LDF model)	153
5.4.7	Reaction kinetic models	162
5.4.8	Adsorption kinetics in multicomponent systems	164
5.5	Practical aspects: Slurry adsorber design	166
6	Adsorption dynamics in fixed-bed adsorbers	169
6.1	Introduction	169
6.2	Experimental determination of breakthrough curves	175
6.3	Fixed-bed process parameters	176
6.4	Material balances	179
6.4.1	Types of material balances	179
6.4.2	Integral material balance	179
6.4.3	Differential material balance	185
6.5	Practical aspects	189
6.5.1	Introduction	189
6.5.2	Typical operating conditions	190
6.5.3	Fixed-bed versus batch adsorber	191
6.5.4	Multiple adsorber systems	193
7	Fixed-bed adsorber design	197
7.1	Introduction and model classification	197
7.2	Scale-up methods	198
7.2.1	Mass transfer zone (MTZ) model	198
7.2.2	Length of unused bed (LUB) model	202
7.2.3	Rapid small-scale column test (RSSCT)	203
7.3	Equilibrium column model (ECM)	207
7.4	Complete breakthrough curve models	211
7.4.1	Introduction	211
7.4.2	Homogeneous surface diffusion model (HSDM)	213
7.4.3	Constant pattern approach to the HSDM (CPHSDM)	217

7.4.4	Linear driving force (LDF) model	220
7.4.5	Comparison of HSDM and LDF model	224
7.4.6	Simplified breakthrough curve models with analytical solutions	226
7.5	Determination of model parameters	232
7.5.1	General considerations	232
7.5.2	Single-solute adsorption	233
7.5.3	Competitive adsorption in defined multisolute systems	238
7.5.4	Competitive adsorption in complex systems of unknown composition	238
7.6	Special applications of breakthrough curve models	240
7.6.1	Micropollutant adsorption in presence of natural organic matter	240
7.6.2	Biologically active carbon filters	248
8	Desorption and reactivation	253
8.1	Introduction	253
8.2	Physicochemical regeneration processes	254
8.2.1	Desorption into the gas phase	254
8.2.2	Desorption into the liquid phase	256
8.3	Reactivation	261
9	Geosorption processes in water treatment	265
9.1	Introduction	265
9.2	Experimental determination of geosorption data	267
9.3	The advection-dispersion equation (ADE) and the retardation concept	268
9.4	Simplified method for determination of R_d from experimental breakthrough curves	271
9.5	Breakthrough curve modeling	273
9.5.1	Introduction and model classification	273
9.5.2	Local equilibrium model (LEM)	275
9.5.3	Linear driving force (LDF) model	277
9.5.4	Extension of the local equilibrium model	279
9.6	Combined sorption and biodegradation	280
9.6.1	General model approach	280
9.6.2	Special case: Natural organic matter (NOM) sorption and biodegradation	285
9.7	The influence of pH and NOM on geosorption processes	287
9.7.1	pH-dependent sorption	287
9.7.2	Influence of NOM on micropollutant sorption	289
9.8	Practical aspects: Prediction of subsurface solute transport	291
9.8.1	General considerations	291

	Contents	IX
9.8.2	Prediction of sorption coefficients	293
9.8.3	Prediction of the dispersivity	295
10	Appendix	297
10.1	Conversion of Freundlich coefficients	297
10.2	Evaluation of surface diffusion coefficients from experimental data	298
10.3	Constant pattern solution to the homogeneous surface diffusion model (CPHSDM)	302
	Nomenclature	307
	References	319
	Index	327
