

Contents

1	Introduction.....	1
1.1	Historical	1
1.2	Comparison Among Piston Engines, Turboprops, and Turbojets.....	4
1.3	Thermal Efficiency, Overall Efficiency, and Specific Fuel Consumption.....	8
1.4	Fuel Combustion with Air	11
1.4.1	Future Fuels	15
1.5	Specific Impulse and Range.....	16
1.6	Some Selected Aircraft Engines and Future Trends.....	18
1.7	Exercises.....	25
2	Thermodynamic Ideal Cycle Analysis	27
2.1	Propeller-Driven Engines	27
2.1.1	Ideal Otto Cycle.....	28
2.1.2	Ideal Diesel Cycle.....	33
2.1.3	Force and Moment Analysis for Piston Engines	37
2.1.4	An Interactive Code for Performance of Otto/Diesel Engines.....	41
2.1.5	Ideal Turboprop Cycles	42
2.2	Jet Engines	46
2.2.1	Ideal Ramjet Cycle.....	47
2.2.2	Ideal Straight-Jet Cycle with Afterburner	54
2.2.3	Ideal Bypass Jet Cycle with Afterburner	64
2.2.4	Ideal Fanjet Cycle with Afterburner	74
2.2.5	An Interactive Computer Program for Ideal Jet Engine Analysis (PAGIC).....	80
2.3	Exercises.....	85

3 Friction, Work, and Heat Addition in a One-Dimensional Channel	87
3.1 Discussion on Efficiencies	96
3.1.1 Diffuser Efficiency	96
3.1.2 Combustion Chamber Efficiencies.....	98
3.1.3 Exhaust Nozzle Efficiencies	99
3.2 Compressor and Turbine Stage and Polytropic Efficiencies	99
3.3 Heating Factor During Compression and Expansion.....	107
3.4 Exercises.....	110
4 Flow Through a Turbomachine	111
4.1 Elementary Theory of a Stage	113
4.2 Reaction and Shape of Blades	124
4.3 Exercises.....	132
5 Estimating Losses	133
5.1 Estimating Losses for Axial Turbomachinery Blades.....	133
5.1.1 Losses in an Axial Turbine	135
5.1.2 Losses in an Axial Compressor.....	144
5.2 Estimating Losses for Centrifugal Compressors.....	144
5.3 Other Losses.....	146
5.4 Slip Factor, Diffusion Factor, and Blockage Factor.....	150
5.5 Exercises.....	151
6 Similarity Rules (on Design Condition)	153
6.1 Exercise.....	161
7 Axial Compressors and Turbines	163
7.1 Equation of Radial Equilibrium.....	163
7.2 Selection of Airfoil Profile for Axial Machines	168
7.3 Calculating Potential Flow in a Blade Cascade	170
7.3.1 Simple Vortex Theory	170
7.3.2 Exact Calculation of Potential Flow	174
7.3.3 Numerical Calculation of Flow	178
7.3.4 Design of Circular Arc Blades.....	179
7.4 Multiple Axial Compressors	180
7.5 Two Examples.....	181
7.5.1 Example 1	181
7.5.2 Example 2	189
8 Centrifugal Compressor	197
8.1 Calculation of a Centrifugal Compressor.....	204

9 Off-Design Running of Aircraft Gas Turbines.....	217
9.1 Analytical Calculation of Performance Map of a Multistage Axial Compressor.....	222
9.2 Equilibrium Running Condition	225
9.3 Surge and Stall.....	229
9.3.1 Casing Treatment for Rotors	230
9.4 Matching of Running of Turbine and Compressor.....	231
9.5 Fuel and Engine Controls.....	231
9.6 Exercises	232
10 Propeller Aerodynamics	233
10.1 Axial Momentum Theory.....	234
10.2 Blade Element Theory.....	240
10.3 Exercise	244
11 Materials and Structural Problems	245
11.1 Materials Problems	245
11.2 Normal Stress Analysis.....	246
11.3 Bending Stress (for Axial Blades).....	248
11.4 Torsional Stress.....	251
11.5 Oscillation of Blades	252
11.5.1 Bending Oscillation.....	252
11.5.2 Torsion Self-Oscillation Frequency	254
11.6 Disk Loading	254
11.7 Shaft Loading.....	255
11.8 Critical rpm.....	257
11.9 Heat Transfer Problems	257
11.10 Noise Pollution and Other Pollution Problems	260
11.10.1 Starting and Running Gas Turbines.....	263
11.10.2 Climate Control for Passenger Aircraft.....	263
11.10.3 Blade-Tip Clearance Control.....	264
11.10.4 Geared Turbofans	264
11.11 Exercises.....	265
Appendix: Engine Data Tables	267
Index.....	305
