PREFACE	vii
1 Introduction	1
1.1 Impacts of H^∞ Control	1
1.2 Theoretical Background	7
2 Elements of Linear System Theory	11
2.1 State-Space Description of Linear Systems	11
2.2 Controllability and Observability	16
2.3 State Feedback and Output Insertion	26
2.4 Stability of Linear Systems	31
3 Norms and Factorizations	37
3.1 Norms of Signals and Systems	37
3.2 Hamiltonians and Riccati Equations	43
3.3 Factorizations	54
4 Chain-Scattering Representations of the Plant	67
4.1 Algebra of Chain-Scattering Representation	67
4.2 State-Space Forms of Chain-Scattering Representation	76
4.3 Dualization	79
4.4 J -Lossless and (J, J') -Lossless Systems	82
4.5 Dual (J, J') -Lossless Systems	90
4.6 Feedback and Terminations	93
5 J-Lossless Conjugation and Interpolation	107
5.1 J -Lossless Conjugation	107
5.2 Connections to Classical Interpolation Problem	114
5.3 Sequential Structure of J -Lossless Conjugation	118

6	J-Lossless Factorizations	129
6.1	(J, J') -Lossless Factorization and Its Dual	129
6.2	(J, J') -Lossless Factorization by J -Lossless Conjugation .	132
6.3	(J, J') -Lossless Factorization in State Space	135
6.4	Dual (J, J') -Lossless Factorization in State Space	147
6.5	Hamiltonian Matrices	152
7	H^∞ Control via (J, J')-Lossless Factorization	159
7.1	Formulation of H^∞ Control	159
7.2	Chain-Scattering Representations of Plants and H^∞ Control	164
7.3	Solvability Conditions for Two-Block Cases	169
7.4	Plant Augmentations and Chain- Scattering Representations	175
8	State-Space Solutions to H^∞ Control Problems	185
8.1	Problem Formulation and Plant Augmentation	185
8.2	Solution to H^∞ Control Problem for Augmented Plants .	192
8.3	Maximum Augmentations	196
8.4	State-Space Solutions	206
8.5	Some Special Cases	211
9	Structure of H^∞ Control	221
9.1	Stability Properties	221
9.2	Closed-Loop Structure of H^∞ Control	224
9.3	Examples	228
