**Part I   What is Evidence-Based Practice  
and How It Influences Clinical Practice**

|                                                                                                       |           |
|-------------------------------------------------------------------------------------------------------|-----------|
| <b>1   Introduction and Overview . . . . .</b>                                                        | <b>3</b>  |
| What is Evidence-Based Practice? . . . . .                                                            | 3         |
| The Foundations and History of Evidence-Based Practice. . . . .                                       | 4         |
| The Overall Goals of Evidence-Based Practice . . . . .                                                | 6         |
| Defining the Evidence-Based Medicine/Evidence-Based<br>Practice Decision-Making Process . . . . .     | 7         |
| What Makes up the Evidence-Based Medicine/Evidence-Based<br>Practice Decision-Making Model? . . . . . | 8         |
| How the Evidence-Based Practice Decision-Making Process<br>Differs From . . . . .                     | 10        |
| ‘Empirically Supported Treatments’ and ‘Best Practices’ . . . . .                                     | 10        |
| Best Practices . . . . .                                                                              | 10        |
| Evidence-Based Practice in Social Work . . . . .                                                      | 12        |
| Was There Not Any Previous Evidence that Treatments Worked? . . .                                     | 14        |
| An Example: Is Medication Useful for Treating Depression? . . . . .                                   | 15        |
| Summary . . . . .                                                                                     | 17        |
| <b>2   Three Perspectives on Evidence-Based Practice . . . . .</b>                                    | <b>19</b> |
| The Policy Level and Administrative Applications<br>of Evidence-Based Practice . . . . .              | 20        |
| Using Evidence in Evaluations of the Performance<br>of Professionals . . . . .                        | 23        |
| Evidence-Based Practice, Many Ways of Knowing<br>and Qualitative Research . . . . .                   | 25        |
| Summary . . . . .                                                                                     | 30        |
| A Starting Point for the Mental Health Practitioner . . . . .                                         | 30        |

|          |                                                                                                                                                                                      |    |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>3</b> | <b>The Steps of Evidence-Based Practice in Clinical Practice:</b>                                                                                                                    |    |
|          | <b>An Overview</b> . . . . .                                                                                                                                                         | 31 |
|          | The Six Steps of EBP in Clinical Practice . . . . .                                                                                                                                  | 32 |
|          | Step 1: Drawing on Client Needs and Circumstances Learned<br>in a Thorough Assessment, Identify Answerable Practice Questions<br>and Related Research Information Needs . . . . .    | 33 |
|          | Information Needs May Not Always Be About<br>Selecting Treatments . . . . .                                                                                                          | 34 |
|          | A Model for Framing Clinical Questions:<br>The P.I.C.O.T. Model. . . . .                                                                                                             | 35 |
|          | Enhancing the Client–Practitioner Relationship . . . . .                                                                                                                             | 36 |
|          | Improving Diagnostic Assessment . . . . .                                                                                                                                            | 37 |
|          | Selecting the Optimal Treatment . . . . .                                                                                                                                            | 38 |
|          | Step 2: Efficiently Locate Relevant Research Knowledge . . . . .                                                                                                                     | 39 |
|          | An Example: What the Literature Shows<br>About Light Therapy . . . . .                                                                                                               | 41 |
|          | Step 3: Critically Appraise the Quality and Applicability<br>of Located Knowledge to the Client’s Needs and Situation. . . . .                                                       | 43 |
|          | Is This Research Applicable to My Client’s Needs<br>and Situation? . . . . .                                                                                                         | 48 |
|          | Step 4: Discuss the Research Results With the Client<br>to Determine How Likely Effective Options Fit With the<br>Client’s Values and Goals. . . . .                                 | 49 |
|          | Step 5: Synthesizing the Client’s Clinical Needs and Circumstances<br>With the Relevant Research, Develop a Shared Plan<br>of Intervention Collaboratively With the Client . . . . . | 51 |
|          | Step 6: Implement the Intervention . . . . .                                                                                                                                         | 52 |
|          | Summary . . . . .                                                                                                                                                                    | 52 |
| <b>4</b> | <b>Assessment in Clinical Social Work and Identifying Practice<br/>Information Needs</b> . . . . .                                                                                   | 55 |
|          | Defining Assessment . . . . .                                                                                                                                                        | 55 |
|          | Components of an Assessment . . . . .                                                                                                                                                | 56 |
|          | The Person-in-Environment Classification System . . . . .                                                                                                                            | 57 |
|          | The Risk and Resilience Framework . . . . .                                                                                                                                          | 59 |
|          | Family Systems Models . . . . .                                                                                                                                                      | 60 |
|          | Psychodynamic Models . . . . .                                                                                                                                                       | 61 |
|          | American Psychiatric Association Guidelines:<br>The Medical Model . . . . .                                                                                                          | 63 |
|          | Assessment of Mental Health Disorders . . . . .                                                                                                                                      | 65 |
|          | The Diagnostic and Statistical Manual of Mental Disorders . . . .                                                                                                                    | 67 |
|          | Guidelines and Cautions Regarding Assessment<br>and Diagnosis . . . . .                                                                                                              | 69 |

|                                                                                                                                     |            |
|-------------------------------------------------------------------------------------------------------------------------------------|------------|
| Diagnostic Tests and Measures . . . . .                                                                                             | 70         |
| A Social Work Assessment Format . . . . .                                                                                           | 71         |
| An Example: Case of Samir—Identifying Practice<br>Information Needs Through Assessment. . . . .                                     | 74         |
| Conclusion . . . . .                                                                                                                | 77         |
| <b>5 Locating Practice Research. . . . .</b>                                                                                        | <b>79</b>  |
