

Contents

1	Introduction	1
Part I Problem Description		
2	City Logistics	9
2.1	Challenges	9
2.1.1	Evolution of Supply Chains	10
2.1.2	Increasing (Freight) Traffic	12
2.2	Solution Concepts	12
2.2.1	Perspective of Different Stakeholders	14
2.2.2	Urban Consolidation Centers	15
2.2.3	City Logistics Initiatives	16
2.3	Modeling	17
2.4	Planning Systems	19
2.4.1	Levels of Planning	19
2.4.2	Architecture of a Planning System	20
3	Attended Home Delivery	23
3.1	Online Retail	23
3.2	Types of Last-Mile Delivery	26
3.3	Customer Time Windows	29
3.3.1	Tactical Planning	29
3.3.2	Operational Planning	30
3.4	Implications	31
Part II Information Models		
4	Knowledge Discovery and Data Mining	37
4.1	Knowledge Discovery Process	37
4.1.1	Preprocessing	39

4.1.2	Data Mining	41
4.1.3	Verification	43
4.2	Cluster Analysis	44
4.2.1	Clustering Approaches	46
4.2.2	Clustering Algorithms	48
4.2.3	Validation of Clusterings	52
4.3	Exploratory Data Analysis	55
5	Analysis of Floating Car Data	59
5.1	Data Collection	61
5.1.1	Traditional Approach	61
5.1.2	Telematics-Based Approach	62
5.2	Preprocessing	66
5.2.1	Attribute “Time”	66
5.2.2	Attribute “Link”	66
5.2.3	Attribute “Speed”	67
5.2.4	Temporal Distribution of Measurements	68
5.2.5	Spatial Distribution of Measurements	68
5.3	First Level Aggregation	69
5.4	Second Level Aggregation	72
5.4.1	Preprocessing	72
5.4.2	Clustering Tendency	72
5.4.3	Clustering Approach	73
5.4.4	Number of Clusters	74
5.5	Exploratory Data Analysis	75
5.5.1	First Level Aggregation	76
5.5.2	Second Level Aggregation	78

Part III Integration of Information Models

6	Provision of Distance Matrices	83
6.1	Static Information Models	86
6.1.1	Digital Roadmap	86
6.1.2	Implementation	89
6.2	Time-Dependent Information Models	90
6.2.1	Modeling of Time Dependence	91
6.2.2	Implementation	97
6.3	Computation of Shortest Paths	100
6.3.1	Shortest Path Problem	100
6.3.2	Time-Dependent Shortest Path Problem	102

7	Evaluation of Information Models	105
7.1	Experimental Setup	105
7.1.1	Traveler Scenarios	106
7.1.2	Traffic Scenarios	106
7.1.3	Information Models	107
7.2	Simulation and Evaluation of Shortest Paths	107
7.3	Computational Results	109
7.3.1	Evaluation of Example Itineraries	109
7.3.2	Overall Evaluation	112

Part IV Optimization Models

8	Routing in City Logistics	119
8.1	Routing of a Single Vehicle	120
8.1.1	Traveling Salesman Problem	120
8.1.2	Time-Dependent Traveling Salesman Problem	127
8.2	Routing of a Fleet of Vehicles	134
8.2.1	Vehicle Routing Problem	134
8.2.2	Time-Dependent Vehicle Routing Problem	137
8.3	Customer Time Windows	140
8.3.1	Vehicle Routing Problem with Time Windows	141
8.3.2	Time-Dependent Vehicle Routing Problem with Time Windows	145
9	Evaluation of Optimization Models	157
9.1	Experimental Setup	157
9.1.1	Customer Scenarios	158
9.1.2	Information Models	158
9.1.3	Evaluation of Heuristics	159
9.2	Routing of a Single Vehicle	161
9.2.1	Customer Scenario 1	162
9.2.2	Customer Scenario 2	164
9.2.3	Customer Scenario 3	165
9.3	Routing of a Fleet of Vehicles	168
9.3.1	Performance of Neighborhood Operators	168
9.3.2	Computational Results	170
9.4	Customer Time Windows	172
9.4.1	Role of Customer Time Windows	173
9.4.2	Simulation of Customer Time Windows	173
9.4.3	Computational Results	174

10	Conclusions and Outlook	179
	References	183
	Index	195
