Foreword	xvii
List of Acronyms and Abbreviations	xix
Acknowledgements	xxiii
1 Introduction	1
1.1 Differentiating Technology and Engineering Innovation	1
1.2 Differentiating Invention and Innovation	2
1.3 The Role of Standards, Regulation and Competition Policy	2
1.4 Mobile Broadband Auction Values – Spectral Costs and Liabilities and Impact on Operator Balance Sheets	3
1.5 TV and Broadcasting and Mobile Broadband Regulation	4
1.6 Technology Convergence as a Precursor of Market Convergence?	5
1.7 Mobile Broadband Traffic Growth Forecasts and the Related Impact on Industry Profitability	5
1.8 Radio versus Copper, Cable and Fibre – Comparative Economics	6
1.9 Standardised Description Frameworks – OSI Seven-Layer Model as a Market and Business Descriptor	7
1.10 Technology and Engineering Economics – Regional Shifts and Related Influence on the Design and Supply Chain, RF Component Suppliers and the Operator Community	8
1.11 Apple as an Example of Technology-Led Market Innovation	12
Part I USER HARDWARE	
2 Physical Layer Connectivity	15
2.1 Differentiating Guided and Unguided Media	15
2.2 The Transfer of Bandwidth from Broadcasting to Mobile Broadband	15
2.3 The Cost of Propagation Loss and Impact of OFDM	17
2.4 Competition or Collaboration?	18
2.5 The Smith Chart as a Descriptor of Technology Economics, Vector Analysis and Moore’s Law	19

2.6	Innovation Domains, Enabling Technologies and their Impact on the Cost of Delivery	20
2.6.1	<i>Graphene – The New Enabler?</i>	24
2.6.2	<i>The Evolution of Photonics</i>	24
2.6.3	<i>Free-Space Optics</i>	33
2.6.4	<i>Infrared Optical Systems</i>	33
2.7	Cable Performance Benchmarks	33
2.8	Hybrid Fibre Coaxial Systems	34
2.9	The DVB-S Satellite Alternative	35
2.10	Terrestrial TV	35
2.11	Copper Access – ADSL and VDSL Evolution	36
2.12	The Copper Conundrum – the Disconnect between Competition Policy and Technical Reality	42
2.13	OFDM in Wireless – A Similar Story?	42
2.13.1	<i>Transforms in Historical Context</i>	45
2.13.2	<i>How Fourier Transforms Deliver Performance Differentiation</i>	49
2.13.3	<i>Characteristics of the Fourier Transform</i>	50
2.13.4	<i>The IDFT and DFT as Used in a WiFi Transceiver</i>	50
2.13.5	<i>Properties of a Sinusoid</i>	51
2.13.6	<i>The IDFT and DFT in Wide-Area OFDM (LTE)</i>	52
2.13.7	<i>The Impact of Transforms on DSP and Microcontroller Architectures – Maths in the Microcontroller</i>	52
2.13.8	<i>How Fourier Transforms Add Value</i>	53
2.13.9	<i>Power Drain and Battery Capacity</i>	53
2.14	Chapter Summary	54
3	Interrelationship of the Physical Layer with Other Layers of the OSI Model	55
3.1	MAC Layer and Physical Layer Relationships	55
3.2	OFDM and the Transformative Power of Transforms	56
3.2.1	<i>The Origins of Matrix Maths and the Hadamard Transform</i>	57
3.2.2	<i>The Hadamard Matrix and the Hadamard Transform</i>	58
3.2.3	<i>The Properties of a Hadamard Matrix</i>	58
3.2.4	<i>Differences Between the FFT and the FHT</i>	59
3.2.5	<i>Some Naming Issues</i>	60
3.2.6	<i>How the FHT and FFT Deliver Cost Reduction</i>	60
3.2.7	<i>The Need to Deliver Cost Reduction and Better Performance</i>	61
3.3	The Role of Binary Arithmetic in Achieving Sensitivity, Selectivity and Stability	61
3.3.1	<i>Coding Distance and Bandwidth Gain</i>	63
3.3.2	<i>An Example – The Barker Code Used in Legacy 802.11 b WiFi Systems</i>	63
3.3.3	<i>Complementary Code Keying used in 802.11 b</i>	64
3.3.4	<i>Walsh Codes used in IS95 CDMA/1EX EV</i>	64
3.3.5	<i>OVSF Codes in W-CDMA</i>	65
3.3.6	<i>CDMA/OFDM Hybrids as a Solution</i>	68

Contents vii

3.4	Summary	69
3.5	Contention Algorithms	69
3.5.1	802.11 QOS and Prioritisation	70
3.5.2	802.11 f Handover	71
3.5.3	802.11 h Power Control	72
3.5.4	802.11 i Authentication and Encryption	72
3.5.5	802.11 j Interworking	72
3.5.6	802.11 k Measurement Reporting	72
3.5.7	802.11 n Stream Multiplexing	72
3.5.8	802.11 s Mesh Networking	73
3.6	The WiFi PHY and MAC Relationship	73
3.6.1	Voice and Video Frame Lengths and Arrival Rates	73
3.6.2	Data Throughput – Distance and MAC Overheads	74
3.6.3	Mobility, Handover and Power Control Overheads	75
3.6.4	Impact of Receive Sensitivity on the Link Budget	77
3.6.5	Linearity Requirements	77
3.6.6	WiFi's Spectral-Efficiency and Power-Efficiency Limitations	78
3.6.7	Why WiFi for IP Voice and Video?	78
3.7	LTE Scheduling Gain	83
3.7.1	LTE QOE and Compression	86
3.7.2	MOS and QOS	87
3.7.3	The Cost of Store and Forward (SMS QOS) and Buffering	87
3.8	Chapter Summary	88
4	Telecommunications Economies of Scale	91
4.1	Market Size and Projections	91
4.2	Market Dynamics	97
4.3	Impact of Band Allocation on Scale Economics	103
4.3.1	FDD versus TDD	103
4.3.2	Band Allocations, Guard Bands and Duplex Separation. The Impact on Transceiver Design, Cost and Performance	107
4.3.3	Software-Defined Radio, WiMax and the 2.6-GHz Extension Bands	109
4.3.4	Intermodulation	110
4.3.5	The Need to Support Higher Frequencies and Linear Power Efficiency	110
4.3.6	The TX/RX Switch for GSM	112
4.3.7	Band Switching	113
4.3.8	Mode Switching	113
4.4	The Impact of Increased RF Integration on Volume Thresholds	113
4.4.1	Differentiating RF Technology and RF Engineering Costs	114
4.4.2	The Impact of Volume Thresholds and Maturity Performance Thresholds on RF Performance – A GSM Example	115
4.4.3	The Impact of Volume Thresholds and Maturity Performance Thresholds – A UMTS Example	116
4.5	The RF Functions in a Phone	118

4.5.1	<i>RF Device Functionality and Useful Inventions Over the Past 100 Years</i>	118
4.5.2	<i>Present-Day Issues of RF Device Integration</i>	119
4.5.3	<i>The Antenna TX/RX Switch Module for GSM, Duplexers for UMTS</i>	119
4.5.4	<i>Other Front-End Switch Paths</i>	120
4.5.5	<i>MEMS Devices</i>	120
4.5.6	<i>Filtering Using Surface Acoustic Wave (SAW), Bulk Acoustic Wave (BAW) Devices and MEMS Resonators – Implications for Future Radio Systems</i>	121
4.5.7	<i>Handset RF Component Cost Trends</i>	121
4.6	Summary	123
5	Wireless User Hardware	125
5.1	Military and Commercial Enabling Technologies	125
5.2	Smart Phones	129
5.2.1	<i>Audio Capabilities</i>	131
5.2.2	<i>Positioning Capabilities</i>	132
5.2.3	<i>Imaging Capabilities</i>	134
5.2.4	<i>Display-Based Interaction – A Game Changer</i>	135
5.2.5	<i>Data Capabilities</i>	137
5.2.6	<i>Batteries (Again) – Impact of Nanoscale Structures</i>	139
5.3	Smart Phones and the User Experience	141
5.3.1	<i>Standardised Chargers for Mobile Phones</i>	141
5.4	Summary So Far	142
5.5	RF Component Innovation	146
5.5.1	<i>RF MEMS</i>	146
5.5.2	<i>Tuneable Capacitors and Adaptive TX and RX Matching Techniques</i>	149
5.5.3	<i>Power-Amplifier Material Options</i>	150
5.5.4	<i>Broadband Power Amplifiers</i>	151
5.5.5	<i>Path Switching and Multiplexing</i>	151
5.6	Antenna Innovations	153
5.6.1	<i>Impact of Antenna Constraints on LTE in Sub-1-GHz Bands</i>	153
5.6.2	<i>MIMO</i>	154
5.6.3	<i>Antennas in Smaller Form Factor Devices Including Smart Phones</i>	156
5.6.4	<i>SISO Testing</i>	156
5.6.5	<i>MIMO Testing</i>	157
5.6.6	<i>SIMO Gains</i>	158
5.6.7	<i>Adaptive Matching Power Savings</i>	159
5.6.8	<i>RF PA and Front-End Switch Paths</i>	160
5.7	Other Costs	162
5.7.1	<i>RF Baseband Interface Complexity</i>	162
5.7.2	<i>Conformance Test Costs</i>	162
5.7.3	<i>Conformance and Performance Test Standards and Opportunities</i>	163
5.7.4	<i>Software-Defined Radio and Baseband Algorithmic Innovation</i>	163
5.7.5	<i>RF Design and Development Dilution</i>	165
5.8	Summary	165

6	Cable, Copper, Wireless and Fibre and the World of the Big TV	167
6.1	Big TV	167
6.2	3DTV	169
6.3	Portable Entertainment Systems	170
6.4	Summary of this Chapter and the First Five Chapters – Materials Innovation, Manufacturing Innovation, Market Innovation	171

Part II USER SOFTWARE

7	Device-Centric Software	175
7.1	Battery Drain – The Memristor as One Solution	175
7.2	Plane Switching, Displays and Visual Acuity	176
7.3	Relationship of Display Technologies to Processor Architectures, Software Performance and Power Efficiency	177
7.4	Audio Bandwidth Cost and Value	181
7.5	Video Bandwidth Cost and Value	182
7.6	Code Bandwidth and Application Bandwidth Value, Patent Value and Connectivity Value	184
8	User-Centric Software	185
8.1	Imaging and Social Networking	185
8.2	The Image Processing Chain	186
8.2.1	<i>The Lens</i>	186
8.2.2	<i>The Sensor Array</i>	186
8.2.3	<i>The Colour Filter Array</i>	188
8.2.4	<i>The JPEG Encoder/Decoder</i>	189
8.2.5	<i>The MPEG Encoder</i>	190
8.3	Image Processing Software – Processor and Memory Requirements	191
8.3.1	<i>Image Processing Hardware</i>	191
8.3.2	<i>Image Processing, Voice Processing and Audio Processing</i>	191
8.3.3	<i>35 mm Cameras as a Quality and Functional Performance Reference</i>	191
8.3.4	<i>Digital Cameras as a Quality and Functional Performance Reference</i>	192
8.3.5	<i>Digital Camera Performance Benchmark 2011</i>	192
8.3.6	<i>The Effect on Camera Phone User Expectations</i>	193
8.4	Digital Camera Software	194
8.4.1	<i>Digital Compact and Digital SLR Cameras as a Quality and Functional Performance Reference</i>	194
8.5	Camera-Phone Network Hardware	196
8.6	Camera-Phone Network Software	196
8.7	Summary	197
9	Content- and Entertainment-Centric Software	199
9.1	iClouds and MyClouds	199
9.2	Lessons from the Past	200
9.2.1	<i>Resolution Expectations</i>	201
9.2.2	<i>Resolution, Displays and the Human Visual System</i>	201

9.2.3	<i>Frame-Rate Expectations</i>	203
9.2.4	<i>Memory Expectations Over Time</i>	203
9.3	Memory Options	203
9.3.1	<i>Tape</i>	203
9.3.2	<i>Optical Storage</i>	203
9.4	Gaming in the Cloud and Gaming and TV Integration	205
9.4.1	<i>DV Tape versus DVD versus Hard-Disk Cost and Performance Comparisons</i>	205
9.4.2	<i>Hard-Disk Shock Protection and Memory Backup</i>	206
9.5	Solid-State Storage	206
9.5.1	<i>Flash (Nor and Nand), SRAM and SDRAM</i>	206
9.5.2	<i>FLASH Based Plug-In Memory – The SIM card as an Example</i>	207
10	Information-Centric Software	211
10.1	Standard Phones, Smart Phones and Super Phones	211
10.1.1	<i>The Semisuper Phone</i>	212
10.2	Radio Waves, Light Waves and the Mechanics of Information Transfer	212
10.2.1	<i>Image Noise and Linear and Nonlinear Distortions</i>	213
10.2.2	<i>The Human Visual System</i>	213
10.3	The Optical Pipe and Pixels	214
10.3.1	<i>Pixels and People</i>	214
10.3.2	<i>The Big Decision</i>	215
10.3.3	<i>Clerical Mathematicians who Influenced the Science of Pixel Probability</i>	215
10.3.4	<i>The Role of Middle England Clerics in Super-Phone Design</i>	216
10.4	Metadata Defined	217
10.4.1	<i>Examples of Metadata</i>	217
10.4.2	<i>Examples of Mobile Metadata</i>	218
10.4.3	<i>Mobile Metadata and Geospatial Value</i>	218
10.4.4	<i>Optional Extended Image Metadata for Big Ben</i>	219
10.4.5	<i>Mobile Metadata’s Contribution to Localised Offer Opportunities, Progressive Mapping and Point and Listen Applications</i>	219
10.5	Mobile Metadata and Super-Phone Capabilities	219
10.6	The Role of Audio, Visual and Social Signatures in Developing ‘Inference Value’	221
10.7	Revenues from Image and Audio and Memory and Knowledge Sharing – The Role of Mobile Metadata and Similarity Processing Algorithms	221
10.8	Sharing Algorithms	222
10.9	Disambiguating Social Mobile Metadata	223
10.9.1	<i>Voice Recognition and the Contribution of Wideband Codecs and Improved Background Noise Cancellation</i>	223
10.9.2	<i>Text-Tagging Functionality</i>	223
10.10	The Requirement for Standardised Metadata Descriptors	223
10.10.1	<i>The Role of MPEG 7 in Mobile Metadata Standardisation</i>	223
10.11	Mobile Metadata and the Five Domains of User Value	224

10.12	Mathematical (Algorithmic Value) as an Integral Part of the Mobile Metadata Proposition	225
10.12.1	<i>Modern Mathematicians and Their Relevance to the User Experience Proposition</i>	225
11	Transaction-Centric Software	229
11.1	Financial Transactions	229
11.2	The Role of SMS in Transactions, Political Influence and Public Safety	230
11.3	The Mobile Phone as a Dominant Communications Medium?	232
11.4	Commercial Issues – The End of the Cheque Book?	232
 Part III NETWORK HARDWARE		
12	Wireless Radio Access Network Hardware	237
12.1	Historical Context	237
12.2	From Difference Engine to Connection Engine	238
12.3	IP Network Efficiency Constraints	240
12.4	Telecoms – The Tobacco Industry of the Twentyfirst Century?	242
12.5	Amortisation Time Scales	242
12.6	Roads and Railways and the Power and Water Economy – The Justification of Long-Term Returns	243
12.6.1	<i>Historical Precedents – Return on Infrastructure Investment Time Scales</i>	243
12.7	Telecommunications and Economic Theory	244
12.7.1	<i>Telecom Politics in Malaysia – An Example of Long-Term Planning and Mixed Results</i>	244
12.7.2	<i>The UK as an Example</i>	245
12.7.3	<i>The Advantage of an Autocracy?</i>	245
12.7.4	<i>UK, US and ROW (Rest of the World) Implications</i>	246
12.7.5	<i>The Role of Telecommunications in Emerging Economies</i>	247
12.7.6	<i>The Telecommunications Economy – A Broader View of Broadband</i>	247
12.7.7	<i>Australia as an Example</i>	248
12.7.8	<i>Universal Narrowband Access in Survival Economies</i>	249
12.7.9	<i>Universal Narrowband Access in Survival Economies – The Impact on Developed and Emerging Economies</i>	249
12.8	The New Wireless Economy in a New Political Age?	250
12.9	Connected Economies – A Definition	251
12.9.1	<i>Enlightenment and Measurement 1750 to 1820</i>	251
12.9.2	<i>Manufacture by Machine 1800 to 1860</i>	252
12.9.3	<i>Age of the Engineer 1820 to 1880</i>	252
12.9.4	<i>Industrial Town</i>	252
12.9.5	<i>Second Industrial Revolution</i>	252
12.9.6	<i>The Age of Mass Production</i>	253
12.9.7	<i>Defiant Modernism</i>	253
12.9.8	<i>Design Diversity 1950 to 1965</i>	253
12.9.9	<i>Age of Ambivalence</i>	253

12.10	Inferences and Implications	254
12.11	The Newly Connected Economy	255
12.11.1	<i>Connecting the Unconnected</i>	255
12.11.2	<i>The Dawn of a New Age of Enlightenment?</i>	256
12.11.3	<i>Enabling Wireless Technologies – Femtocells</i>	256
13	Wireless Core Network Hardware	257
13.1	The Need to Reduce End-to-End Delivery Cost	257
13.1.1	<i>Multiplexing Gain</i>	257
13.2	Microwave-Link Economics	258
13.2.1	<i>Point-to-Multipoint</i>	259
13.3	The Backhaul Mix	259
13.4	The HRAN and L-RAN	260
13.5	Summary – Backhaul Options Economic Comparisons	263
13.6	Other Topics	264
14	Cable Network and Fibre Network Technologies and Topologies	267
14.1	Telegraph Poles as a Proxy for Regulatory and Competition Policy	267
14.2	Under the Streets of London	267
14.3	Above the Streets of London – The Telegraph	269
14.4	Corporate Success and Failure – Case Studies – The Impact of Regulation and Competition Policy	269
14.5	The Correlation of Success and Failure with R and D Spending	271
14.6	Broadband Delivery Economics and Delivery Innovation	273
15	Terrestrial Broadcast/Cellular Network Integration	275
15.1	Broadcasting in Historical Context	275
15.2	Digital Radio Mondiale	277
15.3	COFDM in DRM	277
15.4	Social and Political Impact of the Transistor Radio	278
15.5	Political and Economic Value of Broadcasting	280
15.6	DAB, DMB and DVB H	281
15.7	HSPA as a Broadcast Receiver	283
15.8	Impact of Global Spectral Policy and Related Implications for Receiver Design and Signal Flux Levels	284
15.8.1	<i>Network Density and Cooperative Network Opportunities</i>	287
15.9	White-Space Devices	287
15.9.1	<i>Spectrum Sensing</i>	288
15.10	Transmission Efficiency	289
15.11	Scale Economy Efficiency	289
15.12	Signalling Efficiency	289
15.13	Power Efficiency Loss as a Result of a Need for Wide Dynamic Range	290
15.14	Uneconomic Network Density as a Function of Transceiver TX and RX Inefficiency	290
15.15	Cognitive Radios Already Exist – Why Not Extend Them into White-Space Spectrum?	290

Contents xiii

15.16	An Implied Need to Rethink the White-Space Space	291
15.17	White-Space White House	291
15.18	LTE TV	292
15.18.1	<i>The Difference Between Standard LTE and MBSFN – The Technical Detail</i>	292
15.18.2	<i>MBSFN Investment Incentive – Cost Saving and Revenue Opportunities</i>	294
15.19	Summary	295
15.20	TV or not TV – That is the Question – What is the Answer?	295
15.21	And Finally the Issue of Potential Spectral Litigation	297
15.21.1	<i>Other Prior and Present Examples</i>	298
15.21.2	<i>The Cost of Technology Neutrality</i>	298
15.22	Technology Economics	300
15.23	Engineering Economics	300
15.24	Market Economics	300
15.25	Business Economics	301
15.26	Political Economics	301
15.27	Remedies	301
16	Satellite Networks	303
16.1	Potential Convergence	303
16.2	Traditional Specialist User Expectations	303
16.3	Impact of Cellular on Specialist User Expectations	304
16.4	DMR 446	305
16.5	TETRA and TETRA TEDS	305
16.6	TETRAPOL	306
16.7	WiDEN	306
16.8	APCO 25	306
16.9	Why the Performance Gap Between Cellular and Two-Way Radio will Continue to Increase Over Time	307
16.10	What This Means for Two-Way Radio Network Operators	307
16.11	Lack of Frequency Harmonisation as a Compounding Factor	307
16.12	The LTE 700 MHz Public-Safety-Band Plan	309
16.13	The US 800-MHz Public-Safety-Band Plan	310
16.14	Policy Issues and Technology Economics	313
16.15	Satellites for Emergency-Service Provision	315
16.16	Satellites and Cellular Networks	316
16.17	The Impact of Changing Technology and a Changed and Changing Economic and Regulatory Climate – Common Interest Opportunities	317
16.18	And Finally – Satellite and Terrestrial Hybrid Networks	318
16.19	Satellite Spectrum and Orbit Options	321
16.20	Terrestrial Broadcast and Satellite Coexistence in L Band	324
16.21	Terrestrial DAB Satellite DAB and DVB H	324
16.22	World Space Satellite Broadcast L Band GSO Plus Proposed ATC	324
16.23	Inmarsat – L Band GSO Two-Way Mobile Communications	324
16.24	Thuraya 2 L Band GSO Plus Triband GSM and GPS	325

16.25	ACeS L Band GSO Plus Triband GSM and GPS	325
16.26	Mobile Satellite Ventures L Band GSO Plus ATC	325
16.27	Global Positioning MEOS at L Band GPS, Galileo and Glonass	325
16.28	Terrestrial Broadcast and Satellite Coexistence in S Band	326
16.29	XM and Sirius in the US – S Band GEO Plus S Band ATC	326
16.30	Mobaho in Japan and S DMB in South Korea – S Band GSO Plus ATC	326
16.31	Terrestar S Band in the US – GSO with ATC	327
16.32	ICO S Band GSO with ATC	327
16.33	ICO S Band MEO at S Band with ATC	327
16.34	Eutelsat and SES ASTRA GSO – ‘Free’ S Band Payloads	328
16.35	Intelsat C Band Ku Band and Ka Band GSO	328
16.36	Implications for Terrestrial Broadcasters	328
16.37	Implications for Terrestrial Cellular Service Providers	329
16.38	The Impact of Satellite Terrestrial ATC Hybrids on Cellular Spectral and Corporate Value	329
16.39	L Band, S Band, C Band, K Band and V Band Hybrids	329
16.40	Summary	330

Part IV NETWORK SOFTWARE

17	Network Software – The User Experience	335
17.1	Definition of a Real-Time Network	335
17.2	Switching or Routing	336
17.3	IP Switching as an Option	336
17.4	Significance of the IPv6 Transition	336
17.5	Router Hardware/Software Partitioning	336
17.6	The Impact of Increasing Policy Complexity	337
17.7	So What Do Whorls Have to Do with Telecom Networks?	338
17.7.1	<i>So What’s the Answer?</i>	340
17.7.2	<i>Longer Sessions</i>	340
17.7.3	<i>Shorter Packets with a Fixed Rather than Variable Length</i>	340
17.7.4	<i>Fixed Routing</i>	341
17.8	Packet Arrival Rates	342
17.9	Multilayer Classification	342
17.9.1	<i>Summary – Telecom Cost Complexity</i>	344
17.9.2	<i>Popular Myths – Packet is Cheaper</i>	344
17.9.3	<i>IP Protocol and Signalling Overheads</i>	344
17.9.4	<i>Connectionless is Better than Connection Orientated?</i>	345
17.9.5	<i>The Hidden Costs of IP MMS</i>	345
17.9.6	<i>So is the Internet an Efficient Transport System?</i>	345
17.9.7	<i>So Why is the Internet so Cheap and Why does it Work so Well?</i>	346
17.9.8	<i>So if IP Networks are Neither More Efficient nor Lower Cost than Circuit-Switched or ATM Networks, Why are Telecoms Operators Deploying Them?</i>	346

18	Network Software – Energy Management and Control	347
18.1	Will the Pot Call the Kettle Back?	347
18.2	Corporate M2M	348
18.3	Specialist M2M	348
18.4	Consumer M2M	349
18.5	Device Discovery and Device Coupling in Consumer M2M Applications and the Role of Near-Field Communication	349
18.6	Bandwidth Considerations	350
18.7	Femtocells as an M2M Hub?	351
18.8	Summary	352
19	Network Software – Microdevices and Microdevice Networks – The Software of the Very Small	353
19.1	Microdevices – How Small is Small?	354
19.2	Contactless Smart Cards at 13.56 MHz – A Technology, Engineering and Business Model?	357
19.3	Contactless Smart Cards and Memory Spots – Unidirectional and Bidirectional Value	358
19.4	Contactless Smart Cards, RF ID and Memory Spots	358
19.5	Contactless Smart Cards, RF ID, Memory Spot and Mote (Smart Dust) Applications	359
19.6	The Cellular Phone as a Bridge Between Multiple Devices and Other Network-Based Information	359
19.7	Multiple RF Options	360
19.8	Multiple Protocol Stacks	360
19.9	Adoption Time Scales – Bar Codes as an Example	360
19.10	Summary	361
20	Server Software	363
20.1	The Wisdom of the Cloud?	364
20.2	A Profitable Cloud?	364
20.3	A Rural Cloud?	365
20.4	A Locally Economically Relevant Cloud?	365
20.5	A Locally Socially Relevant Cloud?	365
20.6	A Locally Politically Relevant Cloud – The China Cloud?	366
20.7	The Cultural Cloud?	367
21	Future Trends, Forecasting, the Age of Adaptation and More Transformative Transforms	369
21.1	Future Forecasts	369
21.2	The Contribution of Charles Darwin to the Theory of Network Evolution	370
21.3	Famous Mostly Bearded Botanists and Their Role in Network Design – The Dynamics of Adaptation	371
21.4	Adaptation, Scaling and Context	371
21.5	Examples of Adaptation in Existing Semiconductor Solutions	372

21.6	Examples of Adaptation in Present Mobile Broadband Systems	372
21.7	Examples of Adaptation in Future Semiconductor Solutions	373
21.8	Examples of Adaptation in Future Cellular Networks	373
	21.8.1 <i>How Super Phones Contribute to Competitive Network Value</i>	374
	21.8.2 <i>Phones are the Eyes and Ears of the Network</i>	374
	21.8.3 <i>And Finally Back to Botany and Biology</i>	375
21.9	Specialisation	375
21.10	The Role of Standards Making	376
21.11	The Need for a Common Language	376
	21.11.1 <i>Esperanto for Devices</i>	377
	21.11.2 <i>Esperanto for Engineers</i>	377
21.12	A Definition of Descriptive Domains	377
	21.12.1 <i>Cost, Value and Descriptive Domains – A Description of Silicon Value</i>	378
21.13	Testing the Model on Specific Applications	379
	21.13.1 <i>The Concept of a ‘Dominant Domain’</i>	380
	21.13.2 <i>Dual Dominant-Domain Phones</i>	380
21.14	Domain Value	380
21.15	Quantifying Domain-Specific Economic and Emotional Value	381
21.16	Differentiating Communications and Connectivity Value	382
21.17	Defining Next-Generation Networks	383
21.18	Defining an Ultralow-Cost Network	384
	21.18.1 <i>Ultralow-Cost Storage</i>	384
	21.18.2 <i>Ultralow-Cost Access</i>	384
	21.18.3 <i>The Interrelationship of RF Access Efficiency and Network Cost</i>	384
	21.18.4 <i>The Engineering Effort Needed To Realise Efficiency Gains</i>	385
	21.18.5 <i>The Impact of Standards and Spectral Policy on RF Network Economics</i>	385
21.19	Standards Policy, Spectral Policy and RF Economies of Scale	385
21.20	The Impact of IPR on RF Component and Subsystem Costs	386
21.21	The Cost of ‘Design Dissipation’	386
21.22	The Hidden Costs of Content – Storage Cost	387
21.23	The Hidden Costs of User-Generated Content – Sorting Cost	387
21.24	The Hidden Cost of Content – Trigger Moments	387
21.25	The Hidden Cost of Content – Delivery Cost	388
21.26	The Particular Costs of Delivering Broadcast Content Over Cellular Networks	388
21.27	Summary – Cost and Value Transforms	388
