

Adaptive, tolerant and efficient composite structures

Bearbeitet von
Martin Wiedemann, Michael Sinapius

1. Auflage 2012. Buch. xvi, 464 S. Hardcover

ISBN 978 3 642 29189 0

Format (B x L): 15,5 x 23,5 cm

Gewicht: 878 g

[Weitere Fachgebiete > Technik > Maschinenbau Allgemein > Konstruktionslehre, Bauelemente, CAD](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung [beck-shop.de](#) ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1	Introduction	1
	References	13
 Part I Multifunctional Materials		
2	Nano-Micro-Macro	17
2.1	Looking at Composite Materials at Different Scales	17
2.2	Improving Fiber Composite Materials with Nanoscaled Particles	18
2.3	Smart Material Systems.	20
2.4	Integration of Smart Materials on a Macroscopic Level	20
2.5	Integration of Smart Materials on a Micro- and Nanoscopic Level.	24
2.6	Summary and Conclusion	26
	References	27
3	Piezocomposite Transducers for Adaptive Structures	29
3.1	Piezocomposite Technology	30
3.2	State of the Art for Piezocomposite Transducers for Adaptive Structures	31
3.3	A Modular Manufacturing Concept for Piezocomposites	36
3.4	Multilayer Piezocomposites	39
3.4.1	Manufacturing of Multilayer Piezocomposites	41
3.4.2	Free Strain of Multilayer Piezocomposites	43
3.5	Summary and Conclusion	44
	References	45

4	Nanoscaled Boehmites' Modes of Action in a Polymer and its Carbon Fiber Reinforced Plastic	49
4.1	Challenges of Future Carbon Fiber Reinforced Plastics	49
4.2	Resin-Particle Interactions	50
4.3	Particle-Polymer Interphases	52
4.4	Selected Properties and the Nanocomposites' Particle-Network.	54
4.5	Conclusion: Nanoparticles' Mode of Action in CFRP	55
	References	57
5	Advanced Flame Protection of CFRP Through Nanotechnology	59
5.1	Protection Against Fire	59
5.1.1	Flame Retardants for Fiber Composites.	60
5.1.2	Fire Tests and Supplemental Characterizations.	61
5.2	Materials and Methods	63
5.2.1	Nanoparticles and Resins.	63
5.2.2	Dispersion Process and Material Characterisation	64
5.3	Results and Discussion	64
5.3.1	Thermal Characterization of Very Small Scale Test Specimens	64
5.3.2	Comparison to Standard Fire Test Methods	66
	References	67
6	Fundamental Characterization of Epoxy-Silica Nanocomposites Used for the Manufacturing of Fiber Reinforced Composites	69
6.1	Introduction	69
6.2	Materials and Preparation	70
6.3	Characterization of the Nanocomposites	71
6.3.1	Analysis of the Nanoparticle Distribution	71
6.3.2	Rheological Properties.	72
6.3.3	Thermal Characterization by DMA and DSC.	74
6.3.4	Quantitation of Resin Shrinkage.	75
6.3.5	Determination of Coefficients of Thermal Expansion.	76
6.3.6	Static Mechanical Characterization	78
6.3.7	Identification of Failure Mechanisms by Analysing the Fracture Surface Topology	80
6.4	Conclusion.	82
	References	83
7	Carbon Nanotube Actuation	85
7.1	Introduction	85
7.2	The Actuation Phenomenon of CNT	86

7.3	An Analytical Model for the Actuation Mechanism	87
7.4	Experimental Setup.	88
7.5	Parameterization.	89
7.6	Electrical System	89
7.7	Mechanical System.	91
7.8	Coupling Mechanism	94
7.9	Validation of the Model	96
7.10	Solid Electrolytes for CNT Based Actuators	99
7.11	Specimen Processing and Experimental Setup	100
7.12	Initial Test Results with Solid Electrolytes for CNA.	101
7.13	Conclusion.	103
	References	104
8	Piezoceramic Honeycomb Actuators	107
8.1	Active Control of Mechanical Impedances.	107
8.2	Honeycomb Actuator Design, Fabrication and Applications. . .	111
	References	115

Part II Structural Mechanics

9	Validation Approach for Robust Primary Carbon Fiber-Reinforced Plastic Structures.	119
9.1	Terminology	119
9.2	Validation Process	120
9.3	Example: Stiffened CFRP Panel.	123
9.4	Validation Assessment	127
9.5	Conclusion.	128
	References	130
10	Simulation of Fiber Composites: An Assessment	131
10.1	Modeling Aspects.	131
10.2	Micromechanics	132
10.2.1	Material Properties	132
10.2.2	Micromechanical Stress.	132
10.2.3	Stiffness Homogenization	132
10.2.4	Strength Homogenization.	133
10.3	Laminate Theories	134
10.3.1	Laminate-Wise Approximations	134
10.3.2	Layer-Wise Approximations.	135
10.3.3	Transverse Stresses.	137
10.4	Design and Optimization.	137
10.4.1	Initial Design	137
10.4.2	Structural Optimization	139

10.5	Damage and Failure	140
10.5.1	Failure Criteria	140
10.5.2	Damage Progression	141
10.5.3	Delamination	141
10.5.4	Fatigue	142
10.6	Manufacturing	144
10.6.1	Draping	144
10.6.2	Resin Flow and Curing	144
	References	146
11	Modeling of Manufacturing Uncertainties	
	by Multiscale Approaches	155
11.1	Classification of Manufacturing Uncertainties	155
11.2	Brief Review on Multiscale Modeling	156
11.3	A Novel Multiscale Modeling Approach	157
11.3.1	Definition of the Local Models	158
11.3.2	Global-to-Local Transition	158
11.3.3	Local-to-Global Transition	159
11.3.4	Numerical Determination of the Global Tangent Stiffness Operator C_M	160
11.4	Numerical Example	160
11.4.1	Reference Calculations	160
11.4.2	Calculation with Homogenization-Based Two-Way Multiscale Approach	161
11.5	Conclusion and Outlook	163
	References	164
12	Experimental Determination of Interlaminar Material Properties	
	of Carbon Fiber Composites	167
12.1	Introduction	167
12.2	Intra- and Inter-Laminar Failure Behaviour of NCF	168
12.3	Interlaminar Test Methods	169
12.4	A Test Setup for Interlaminar Properties Under Combined Loading	170
12.4.1	Material Preparation and Specimen Production	171
12.4.2	Testing and Analysis of the Results	172
12.4.3	Results for Combined Interlaminar Loads	174
12.5	Conclusion	176
	References	176
13	Impact and Residual Strength Assessment Methodologies	179
13.1	Failure Analysis with Damage Initiation and Degradation	179
13.1.1	Damage Models for Monolithic Composites	180
13.1.2	Core and Skin Damage in Sandwich Structures	180

13.2	Impact Analysis	181
13.2.1	Impact on a Monolithic Composite Panel	182
13.2.2	Impact on a Composite Sandwich Panel	182
13.3	Residual Strength Analysis	184
13.3.1	CAI Analysis for Monolithic Composites	184
13.3.2	CAI Analysis for Composite Sandwich Structures	186
	References	187
14	Improved Stability Analysis of Thin Walled Stiffened and Unstiffened Composite Structures:	
	Experiment and Simulation	189
14.1	Stability Analysis of Stringer Stiffened Curved CFRP Panels	189
14.1.1	Test Structures	190
14.1.2	Test Preparation	191
14.1.3	Test Results of a Cyclic and Collapse Test	192
14.1.4	Test–Simulation Correlation.	193
14.2	Stability Analysis of Unstiffened CFRP Cylindrical Shells	195
	References	197
15	Composite Process Chain Towards As-Built Design	199
15.1	Current State of Composite Processes	199
15.2	Continuous Composite Process Chain	200
15.3	Application of Manufacturing Feedback for Fiber Placement and Curing	202
15.3.1	Feedback of Effective Material Properties	203
15.3.2	Feedback of Fiber Alignment.	204
15.3.3	Feedback of Process Induced Residual Stresses and Distortions.	206
15.4	Outcome of the As-Built Feedback Method	209
	References	209
16	Innovative Testing Methods on Specimen and Component Level.	211
16.1	Buckling Test Facility.	211

16.1.2	Static Axial Loads Combined with Torsion for Cylinders	213
16.1.3	Combined Axial Compression Shear Test Device for Curved Stiffened Panels	214
16.1.4	Dynamic Loading of Cylinders.	215
16.2	Variable Component Test Facility	216
16.3	Test Devices for Standard Testing Machines	217
16.3.1	Stringer Pull-off Device.	217

16.3.2	3D-Biax Device	218
16.4	Thermo-Mechanical Test Field.	218
16.4.1	Thermo-Mechanical Test Facility THERMEX	219
16.4.2	High Radiation Compartment.	220
References		221

Part III Composite Design

17	Compliant Aggregation of Functionalities	225
17.1	Motivation and Definition	225
17.2	Smart Material Design	226
17.2.1	Resin Modification	227
17.2.2	Fiber Metal Laminates	228
17.2.3	Structural Material	228
17.2.4	Local Reinforcement.	229
17.2.5	Abrasion Protection	229
17.3	Pro-Composite Design.	230
17.4	Structure Integrated Smart Components.	231
17.4.1	De-Icing	231
17.4.2	Structure Integrated Lighting System	232
17.4.3	Actuator Induced Morphing.	233
17.5	Adaptive Systems	234
