Chapter 1

ADVANCES IN THE STUDY OF ELECTROCHEMICAL AND CORROSION PHENOMENA IN HIGH SUBCRITICAL AND IN SUPERCRITICAL AQUEOUS SOLUTIONS

Digby D. Macdonald

I. Introduction	1
II. Definition of the Environment	6
1. Properties	12
2. Standardization of pH Scale	19
3. Contribution of the Activity of Water	24
III. Sensors	28
1. Internal Reference Electrodes.....	30
(i) <i>Hydrogen Electrodes</i>	30
(ii) <i>Silver/Silver Chloride Electrodes</i>	40
(iii) <i>Other Internal Reference Electrodes</i>	42
2. External Reference Electrodes.....	45
(i) <i>Isothermal Liquid Junction Potential</i>	49
(ii) <i>Thermal Liquid Junction Potentials</i>	50
3. Measurement of pH	64
4. Redox and Combination Sensors.....	73
VI. Corrosion Studies	80
1. General Corrosion.....	80
2. Some Theoretical Aspects of General Corrosion Mechanisms	88
3. ENA Studies of General Corrosion	92
4. Effect of Temperature.....	93
5. Effect of Pressure on Metal Corrosion Rate	116

6. Stress Corrosion Cracking	136
VII. Polarization Studies	167
1. Effect of Temperature	167
VIII. Summary and Conclusions	174
References	175

Chapter 2

PASSIVE OXIDE FILMS ON IRON BY IN-SITU DETECTION OF OPTICAL TECHNIQUES

Toshiaki Ohtsuka

I. Introduction	183
II. Optical Techniques	185
1. Ellipsometry	185
(i) Polarized Light	186
(ii) Reflection of Polarized Light at Solid Surface	187
(iii) Reflection Coefficient	188
(iv) Apparatus	190
(v) 3-Parameter Ellipsometry	192
2. Raman Spectroscopy	193
3. AC Technique	195
4. Photo-Excitation	200
III. Passive Oxide Film on Iron	200
1. Thickness of Passive Films on Iron at the Stationary State	200
2. Non-Stationary Growth of the Passive Oxide on Iron	207
3. Outer Hydrous Layer on the Passive Oxide Film	213
4. Spectroscopic Property of the Passive Oxide	217
5. Composition from Raman Spectroscopy	220
6. AC Response for Characterization as n-Type Semiconductor	225
7. Photo-Excitation Current	229
IV. Conclusions	238
References	239

Chapter 3

PROBING AND MODELLING OF GALVANIC
COUPLING PHENOMENA IN LOCALIZED
CORROSION

Roland Oltra and Bruno Vuillemin

I. Introduction	243
II. Experimental Data for Numerical Simulation and Model Validation	249
1. How to Evaluate the Galvanic Series for Elementary Microstructure Components: Scanning Kelvin Probe Force Microscopy	249
2. How to Measure the Electrochemical Kinetics for the Elementary Microstructure Components: Microelectrochemical Probes	252
3. How to Define the Chemical Composition Gradients: Electrochemical and Optical Sensors	256
(i) Amperometric Sensors for Solution Chemistry Mapping	256
(ii) Potentiometric Sensors for Solution Chemistry Mapping	258
(iii) Optical Sensors	260
4. How to Image In-Situ the Galvanic Current Distribution: Scanning Vibrating Electrode Technique	263
III. Simulation of Localized Galvanic Corrosion	266
1. Basic Equations	266
2. Resolution of the Nernst-Planck's Equation in the Case of a Bimetallic Couple of Well-Defined Geometry	273
(i) Set-Up of the Model	273
(ii) Modelling Results	279
3. Resolution of the Nernst-Planck's Equation in the Case of a Localized Galvanic Cell on a Real Microstructure	284
(i) From Phenomenology to Model	284
(ii) Set-Up of the Model	287
(iii) Modelling Results	291

V. Conclusions	293
Acknowledgements	293
References	294

Chapter 4

PREPARATION OF HIERARCHICAL (NANO/MESO/MACRO) POROUS STRUCTURES USING ELECTROCHEMICAL DEPOSITION

Heon-Cheol Shin and Meilin Liu

I. Introduction	297
II. Unique Porous Structures for Electrochemical Devices	299
1. Nano-Powder Based Porous Structures	299
2. One-Dimensional Porous Structures	301
3. Porous Structures with Graded Pore Size	302
III. Preparation of Three-Dimensional Hierarchical Porous Electro-Deposits	302
1. Fractals: Unique Porous Structures for Energy Applications	302
2. Formation Mechanism of Hierarchical Porous Structures with Graded Pore Size	303
3. Metals and Alloys with Hierarchical Porous Structures	305
(i) 3-D Copper and Tin Electro-Deposits	305
(ii) 3-D Electro-Deposits of Cu-Sn Alloy	310
IV. Control of Pore Size and Wall Structure of Copper Hierarchical Porous Electro-Deposits	312
1. Change in the Content of Copper or Tin Ions	312
2. Control of the Pore Size of 3-D Foam Structure	315
3. Control of Foam Wall Structure	318
V. Applications of Hierarchical Porous Structures to Functional Electrochemical Devices	319
1. Copper-Ceria Composite Anode for Solid Oxide Fuel Cell	319
2. Tin and Copper-Tin Alloy for Lithium Ion Battery	323

VI. Conclusions	325
Acknowledgements	327
References	327
Index.....	331
