

A Comprehensive Treatment of q-Calculus

Bearbeitet von
Thomas Ernst

1. Auflage 2012. Buch. xvi, 492 S. Hardcover

ISBN 978 3 0348 0430 1

Format (B x L): 15,5 x 23,5 cm

Gewicht: 919 g

Weitere Fachgebiete > Mathematik > Mathematische Analysis >
Differentialrechnungen und -gleichungen

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1	Introduction	1
1.1	A survey of the chapters	1
1.2	What is q -calculus?	6
1.2.1	Elementary series manipulations	9
1.3	Update on q -calculus	9
1.3.1	Current textbooks on this subject	10
1.3.2	Comparison with complex analysis	11
1.4	Comparison with nonstandard analysis	11
1.5	Comparison with the units of physics	12
1.6	Analogies between q -analysis and analysis	17
1.7	The first q -functions	18
2	The different languages of q-calculus	27
2.1	Schools—traditions	28
2.2	Ramifications and minor Schools	30
2.2.1	Different notations	34
2.3	Finite differences and Bernoulli numbers	35
2.4	Umbral calculus, interpolation theory	37
2.5	Elliptic and Theta Schools and notations, the oldest roots—the q -forerunners	38
2.6	Trigonometry, prosthaphaeresis, logarithms	40
2.7	The development of calculus	42
2.8	The Faulhaber mathematics	47
2.9	Descartes, Leibniz, Hindenburg, Arbogast	48
2.10	The Fakultäten	50
2.11	Königsberg School	52
2.12	Viennese School	52
2.13	Göttingen School	53
2.14	The combinatorial School: Gudermann, Grünert	53
2.15	Heidelberg School	55
2.16	Weierstraß, formal power series and the Γ function	56

2.17	Halle q -analysis School	56
2.18	Jakob Friedrich Fries, Martin Ohm, Babbage, Peacock and Herschel	57
2.19	Different styles in q -analysis	61
3	Pre q-Analysis	63
3.1	The early connection between analytic number theory and q -series	63
3.2	Some aspects of combinatorial identities	64
3.2.1	Faà di Bruno formula	66
3.3	The duality between Bernoulli and Stirling numbers	66
3.4	Tangent numbers, Euler numbers	68
3.5	The occurrence of binomial coefficient identities in the literature	68
3.6	Nineteenth century: Catalan, Grigoriew, Imchenetsky	68
3.7	A short history of hypergeometric series	69
3.7.1	The Γ function	70
3.7.2	Balanced and well-poised hypergeometric series	71
3.7.3	Fractional differentiation	71
3.7.4	Newton, Taylor, Stirling, Montmort	72
3.7.5	Euler's contribution	72
3.7.6	Vandermonde and Pfaffian summation formulas	73
3.7.7	Conic sections in the seventeenth century	74
3.7.8	The infinity in England	74
3.7.9	The infinity in the hands of Euler	74
3.7.10	The infinity, the binomial coefficients	75
3.7.11	Gauß' contribution	75
3.7.12	After Gauß; Clausen, Jacobi	77
3.7.13	Kummer's contribution	77
3.7.14	Cauchy, Riemann, Heine, Thomae, Papperitz	79
3.7.15	1880–1914; Sonine, Goursat, Stieltjes, Schafheitlin, Pochhammer, Mellin	80
3.7.16	First half of the twentieth century; England, USA	81
3.7.17	Special functions defined by integrals	85
3.7.18	Second half of the twentieth century	85
3.8	The Jacobi theta functions; different notations; properties	85
3.9	Meromorphic continuation and Riemann surfaces	90
3.10	Wave equation	91
3.11	Orthogonal polynomials	92
3.11.1	Legendre-d'Allonville-Murphy polynomials	92
3.11.2	Laguerre-Abel-Sonine-Murphy-Chebyshev-Halphen- Szegő polynomials	93
3.11.3	Jacobi polynomials	95
3.11.4	Hermite polynomials	95
4	The q-umbral calculus and semigroups. The Nørlund calculus of finite differences	97
4.1	The q -umbral calculus and semigroups	98
4.2	Finite differences	104

4.3	q -Appell polynomials	114
4.3.1	The generalized q -Bernoulli polynomials	117
4.3.2	The Ward q -Bernoulli numbers	118
4.3.3	The generalized JHC q -Bernoulli polynomials	123
4.3.4	NWA q -Euler polynomials	128
4.3.5	The NWA generalized q -Euler numbers	129
4.3.6	Several variables; n negative	135
4.3.7	q -Euler-Maclaurin expansions	140
4.3.8	JHC polynomials of many variables; negative order	142
4.3.9	JHC q -Euler-Maclaurin expansions	146
4.3.10	Euler symbolic formula	148
4.3.11	Complementary argument theorems	152
4.4	q -Lucas and q -G polynomials	153
4.4.1	q -Lucas numbers	156
4.4.2	The q -G polynomials	158
4.4.3	Lucas and G polynomials of negative order	162
4.4.4	Expansion formulas	165
4.5	The semiring of Ward numbers	167
5	q-Stirling numbers	169
5.1	Introduction	169
5.2	The Hahn-Cigler-Carlitz-Johnson approach	171
5.3	The Carlitz-Gould approach	183
5.4	The Jackson q -derivative as difference operator	189
5.5	Applications	192
6	The first q-functions	195
6.1	q -analogue, q -factorial, tilde operator	195
6.2	The q -derivative	200
6.3	The q -integral	202
6.4	Two other tilde operators	204
6.5	The Gaussian q -binomial coefficients and the q -Leibniz theorem	207
6.5.1	Other formulas	211
6.6	Cigler's operational method for q -identities	212
6.7	Gould and Carlitz q -binomial coefficient identities	215
6.8	q -Exponential and q -trigonometric functions	218
6.9	The Heine function	224
6.10	Oscillations in q -analysis	226
6.11	The Jackson-Hahn-Cigler q -addition and q -analogues of the trigonometric functions	227
6.11.1	Further q -trigonometric functions	228
6.12	The Nalli-Ward-Al-Salam q -addition and some variants of the q -difference operator	230
6.13	Weierstraß elliptic functions and sigma functions	234
6.13.1	Elliptic functions	235
6.13.2	Connections with the Γ_q function	236
6.14	The Chen-Liu operator or parameter augmentation	239

7	q-hypergeometric series	241
7.1	Definition of q -hypergeometric series	241
7.1.1	q -difference equation for ${}_{p+1}\phi_p$	243
7.2	Balanced and well-poised q -hypergeometric series	243
7.3	Advantages of the Heine definition	246
7.4	q -Binomial theorem	246
7.5	Jacobi's elliptic functions expressed as real and imaginary parts of q -hypergeometric series with exponential argument (Heine)	248
7.6	The Jacobi triple product identity	248
7.7	q -contiguity relations	249
7.8	Heine q -transformations	250
7.8.1	The q -beta function	252
7.9	Heine's q -analogue of the Gauß summation formula	252
7.10	A q -analogue of the Pfaff-Saalschütz summation formula	255
7.11	Sears' ${}_4\phi_3$ transformation	257
7.12	q -analogues of Thomae's transformations	258
7.13	The Bailey-Daum summation formula	259
7.14	A general expansion formula	260
7.15	A summation formula for a terminating very-well-poised ${}_4\phi_3$ series	263
7.16	A summation formula for a terminating very-well-poised ${}_6\phi_5$ series	265
7.17	Watson's transformation formula for a terminating very-well-poised ${}_8\phi_7$ series	265
7.18	Jackson's sum of a terminating very-well-poised balanced ${}_8\phi_7$ series	268
7.18.1	Three corollaries	269
7.19	Watson's proof of the Rogers-Ramanujan identities	269
7.20	Bailey's 1929 transformation formula for a terminating, balanced, very-well-poised ${}_{10}\phi_9$	272
7.21	Watson's q -analogue of the Barnes contour integral	274
7.22	Three q -analogues of the Euler integral formula for the function $\Gamma(x)$	275
7.23	Inequalities for the Γ_q function	276
7.24	Summary of the umbral method	277
8	Sundry topics	279
8.1	Four q -summation formulas of Andrews	279
8.2	Some quadratic q -hypergeometric transformations	287
8.3	The Kummer ${}_2F_1(-1)$ formula and Jacobi's theta function	290
8.4	Another proof of the q -Dixon formula	292
8.5	A finite version of the q -Dixon formula	293
8.6	The Jackson summation formula for a finite, 2-balanced, well-poised ${}_5\phi_4$ series	293
8.7	The Jackson finite q -analogue of the Dixon formula	294
8.8	Other examples of q -special functions	294
8.9	q -analogues of two formulas by Brown and Eastham	296

8.10	The q -analogue of Truesdell's function	297
8.11	The Bailey transformation for q -series	298
8.12	q -Taylor formulas with remainder; the mean value theorem . . .	300
8.12.1	The mean value theorem in q -analysis	303
8.13	Bilateral series	303
8.14	Fractional q -integrals	306
9	q-orthogonal polynomials	309
9.1	Ciglerian q -Laguerre polynomials	309
9.1.1	The different Laguerre-philosophies	309
9.1.2	The q -Laguerre polynomials	310
9.1.3	Generating functions and recurrences	312
9.1.4	Product expansions	318
9.1.5	Bilinear generating functions	322
9.1.6	Al-Salam operator expressions	326
9.1.7	The q -Laguerre Rodriguez operator	333
9.1.8	q -orthogonality	337
9.2	q -Jacobi polynomials	338
9.2.1	Definition and the Rodriguez formula	338
9.2.2	The q -Jacobi Rodriguez operator	340
9.2.3	More generating functions and recurrences	348
9.2.4	q -orthogonality	352
9.3	q -Legendre polynomials and Carlitz-Al-Salam polynomials . . .	355
9.3.1	q -Legendre polynomials	355
9.3.2	Carlitz-Al-Salam polynomials	357
10	q-functions of several variables	359
10.1	The corresponding vector notation	359
10.2	Historical introduction	364
10.3	Transformations for basic double series	370
10.3.1	Double q -balanced series	373
10.3.2	Transformation formula of Carlitz-Srivastava	375
10.3.3	Three formulas of Andrews	377
10.3.4	q -Analogues of Carlson's formulas	378
10.4	The q -Appell function Φ_1 as q -integral	381
10.5	q -analogues of some of Srivastava's formulas	382
10.6	Some q -formulas of Srivastava	391
10.6.1	Generating functions	391
10.6.2	Transformations	393
10.6.3	Double sum identities (Srivastava and Jain)	394
10.7	Two reduction formulas of Karlsson and Srivastava	397
10.8	q -analogues of reducibility theorems of Karlsson	399
10.9	q -Analogues of Burchall-Chaundy expansions	401
10.9.1	q -analogues of Verma expansions	413
10.9.2	A similar formula	415
10.10	Multiple extensions of the Rothe-von Gröson-Gauß formula . . .	417

10.11	An expansion formula in the spirit of Chaundy	421
10.12	Formulas according to Burchnall-Chaundy and Jackson	422
11	Linear partial q-difference equations	427
11.1	Introduction	427
11.2	Canonical equations and symmetry techniques for q -series (Kalnins, Miller)	428
11.3	q -difference equations for q -Appell and q -Lauricella functions .	432
12	q-Calculus and physics	441
12.1	The q -Coulomb problem and the q -hydrogen atom	441
12.2	Connections to knot theory	442
12.3	General relativity	442
12.4	Molecular and nuclear spectroscopy	442
12.5	Elementary particle physics and chemical physics	443
12.6	Electroweak interaction	444
12.7	String theory	444
12.8	Wess-Zumino model	445
12.9	Quantum Chromodynamics	446
