
Contents

1 Particle Mechanics	1
General Introduction	1
Single Particle Mechanics	1
A Digression on Notation	3
Back to the Main Stream	4
Systems of Particles	4
Virtual Work and the Euler-Lagrange Equations	7
D'Alembert's Principle	7
Hamilton's Principle	11
Generalized Forces and the Rayleigh	
Dissipation Function	13
Applications and Examples	14
Orbital Mechanics	14
Ballistics	20
Rotating Coordinate Systems	24
Exercises	28
References	29
2 Rigid Body Mechanics	31
Kinematics	31
A Geometrical Digression onto a Plane	32
Return to the Main Stream: The Euler Angles	33
Placing Axes	41
The Rotation Vector	44
The Aeronautical Convention	46
The Combined Rotations as a Single Rotation	47
An Idiosyncratic Approach to the Moment	
of Inertia Tensor (Matrix)	48
Dynamics	51
Applications/Examples	53
Exercises	58
References	59
3 Forces and Constraints	61
Introductory Comments: Constraints	61
Holonomic Constraints	63
Bead on a Wire	63
Articulated Links	68

Generalized Forces	73
Common Nonholonomic Constraints	76
The Rolling Constraint	77
Planar Mechanisms	85
The Four Bar Linkage	85
The Slider-Crank Mechanism	89
One-Sided (Unilateral) Nonholonomic Constraints	91
Introduction	91
Walls	92
Exercises	97
References	98
4 Alternate Formulations	99
Introduction	99
Hamilton's Equations	99
Hamiltonian Formalism	102
Routh's Procedure	104
Quasicoordinates	104
The General Procedure	105
The Null Space Transformation	109
A Summary of the Null Space Method	116
Summary	119
Exercises	120
References	120
5 Kane's Method and the Kane-Hamilton Synthesis	121
Kane's Method	121
Theoretical Development	121
An "Algorithm"	123
The Method of Zs	125
Applications/Examples	126
The Kane-Hamilton Synthesis	141
Summary	145
Exercises	145
References	146
6 Simple Motors, Stability and Control	147
Introduction	147
Simple DC Motors	147
Linear Stability	153
Control Theory and Some Applications	162
Controllability in General	167
An Algorithm for Controllable Single Input Systems	169
PUMA Revisited	170
The Inverted Spherical Pendulum	172
Exercises	178
References	179

7 Mechanisms and Robots	181
Introduction	181
Reduction Gear Train	181
The Universal Joint Assembly	183
Rack and Pinion Steering	187
Kinematics	190
The Stationary System	190
The Slider Crank as a One Cylinder Engine	193
Industrial Robots	197
Kinematics	199
Dynamics	203
Exercises	208
Reference	208
8 Wheeled Vehicles	209
Introduction	209
One Wheel Monorail	210
Motorized Two Wheel Cart	218
Choice <i>a</i>	219
Choice <i>b</i>	220
Equilibrium and Control	221
A Nonlinear Control Algorithm	222
A Bicycle Model for a Car	224
Unicycles	230
The Planar Unicycle	231
The Three Link Unicycle: A (Too)	
Simple Model	234
Casters and Their Behavior	242
A Grocery Cart	243
Exercises	251
References	253
Appendix A: Indicial Notation	255
Introductory Comments	255
Vectors	255
Matrices	256
Application to the Euler-Lagrange Process	257
Appendix B: Numerical Solution of Vector	
Initial Value Problems	259
References	264
Index	265
