

Contents

- 1 Overview of Broadband Access Technologies..... 1**
 - 1.1 Broadband Access Technologies 2
 - 1.1.1 Digital Subscriber Line 2
 - 1.1.2 Hybrid Fiber Coaxial Cable 3
 - 1.1.3 Broadband Over Powerline..... 3
 - 1.1.4 Wireless Broadband Access 4
 - 1.1.5 Optical Fiber 6
 - 1.2 Optical Access Networks 7
 - 1.2.1 Point-to-Point Fiber..... 7
 - 1.2.2 Active Ethernet Network 9
 - 1.2.3 Passive Optical Network 9
 - 1.3 Summary 10
- 2 PON Architectures 11**
 - 2.1 TDM PON 12
 - 2.1.1 APON/BPON (ITU-T G.983) 13
 - 2.1.2 GPON (ITU-T G.984) 14
 - 2.1.3 NG-PON (ITU-T G.987) 14
 - 2.1.4 EPON (IEEE 802.3ah)..... 16
 - 2.1.5 10G EPON (IEEE 802.3av) 16
 - 2.2 WDM PON 17
 - 2.3 OFDM PON 20
 - 2.4 Summary 22
- 3 Media Access Control and Resource Allocation in GPON 23**
 - 3.1 Media Access Control in GPON 23
 - 3.1.1 Downstream Transmission 23
 - 3.1.2 Upstream Transmission..... 24
 - 3.2 Dynamic Bandwidth Allocation 25
 - 3.3 Traffic Mapping 27
 - 3.4 Summary 28

4 Media Access Control and Resource Allocation in EPON and 10G-EPON	29
4.1 Media Access Control in EPON and 10G-EPON	29
4.1.1 ONU Discovery and Registration	30
4.1.2 Synchronization and Ranging	31
4.1.3 Resource Allocation	32
4.2 Dynamic Bandwidth Allocation (DBA)	32
4.2.1 Inter-ONU Bandwidth Allocation	33
4.2.2 Intra-ONU Scheduling	36
4.3 Maximizing User QoE in DBA	37
4.3.1 QoE	37
4.3.2 The Downstream Scenario	39
4.3.3 The Upstream Scenario	43
4.3.4 Simulation Results and Analysis	44
4.4 Summary	51
5 Media Access Control and Resource Allocation in WDM PON	53
5.1 WDM PON Architecture	53
5.2 Media Access Control	55
5.2.1 Dynamic Bandwidth Allocation	57
5.3 Modeling and Problem Formulation	58
5.3.1 Wavelengths → Machines	58
5.3.2 ONU Requests → Jobs	58
5.3.3 Scheduling Objective	59
5.4 Problem 1: Non-preemptive Scheduling for ONUs Supporting Different Sets of Wavelengths	59
5.5 Problem 2: Preemptive Scheduling for Lasers in ONUs Requiring Non-zero Tuning Time	61
5.6 Summary	64
6 OFDM PON	67
6.1 OFDM PON Architecture	67
6.2 Media Access Control	67
6.2.1 TDMA-Based Media Access Control	68
6.2.2 FDMA-Based Media Access Control	68
6.2.3 Hybrid TDMA and FDMA Media Access Control	69
6.2.4 Performance Evaluation	70
6.3 Summary	72
7 Hybrid Optical and Wireless Access	75
7.1 Advantages of Optical Wireless Integration	75
7.2 Integrated OFDMA PON and Wireless Access	77
7.2.1 Resource Allocation	78
7.2.2 MAC	80
7.2.3 Performance Analysis	82
7.3 Summary	85

8 Green Passive Optical Networks	87
8.1 Reducing Energy Consumption of ONUs	88
8.1.1 Sleep Status of ONUs	90
8.1.2 Scenario 1: Sleep for More Than One DBA Cycle.....	90
8.1.3 Scenario 2: Sleep Within One DBA Cycle	93
8.2 Reducing Energy Consumption of the OLT	94
8.2.1 Framework of the Energy-Efficient OLT Design.....	95
8.2.2 The OLT with Optical Switch	95
8.2.3 The OLT with Cascaded 2×2 Switches	97
8.3 Summary	98
9 Looking Forward	99
