Preface	XV
1 Introduction	1
2 Preliminaries	5
2.1 A list of symbols	5
2.2 Matrices, linear spaces, and linear operators	6
2.3 Norms of deterministic signals	12
2.4 Norms of stochastic signals	19
2.5 Norms of linear time- or shift-invariant systems	20
2.6 A class of saturation functions	26
2.7 Internal stability	28
2.7.1 Lyapunov's direct method	31
2.8 External stability	35
2.9 Relationship between internal stability and external stability	43
3 A special coordinate basis (SCB) of linear multivariable systems	51
3.1 Introduction	51
3.2 The SCB	51
3.2.1 Structure of the SCB	53
3.2.2 SCB equations	54
3.2.3 A compact form	57
3.3 Properties of the SCB	59
3.3.1 Observability (detectability) and controllability (stabilizability)	60
3.3.2 Left and right invertibility	61
3.3.3 Finite zero structure	62
3.3.4 Infinite zero structure	68
3.3.5 Geometric subspaces	69
3.3.6 Miscellaneous properties of the SCB	75
3.3.7 Additional compact forms of the SCB	76
3.4 Software packages to generate SCB	78
3.A "Maple" implementation	79
3.A.1 Pretransformation of non-strictly proper systems	81
3.A.2 "Maple" procedure	81
3.A.3 Examples	86

3.A.4	Numerical issues	91
3.A.5	“Maple” code	92
4	Constraints on inputs: actuator saturation	111
4.1	Introduction	111
4.2	Problem statements and their solvability results	114
4.3	Semi-global stabilization: direct eigenstructure assignment	120
4.3.1	Continuous-time systems	121
4.3.2	Discrete-time systems	129
4.4	Semi-global stabilization: Riccati-based methods	139
4.4.1	H_2 ARE-based methods in continuous time	139
4.4.2	H_2 ARE-based methods in discrete time	145
4.4.3	H_∞ ARE-based methods in continuous time	152
4.4.4	H_∞ ARE-based methods in discrete time	158
4.5	Semi-global stabilization by low-and-high-gain design	166
4.5.1	Direct eigenstructure assignment: continuous time	168
4.5.2	Direct eigenstructure assignment: discrete time	185
4.5.3	ARE-based methods: continuous time	195
4.5.4	ARE-based methods: discrete time	201
4.6	Global stabilization	206
4.6.1	Linear feedback controllers for neutral systems	206
4.6.2	Nonlinear feedback controllers based on adaptive-low-gain design methodology	215
4.6.3	Adaptive-low-gain and high-gain design methodology	223
4.7	Issues on global stabilization of linear systems subject to actuator saturation	229
4.7.1	Mixed case of single integrators, double integrators, and neutrally stable dynamics	231
4.7.2	Triple integrator with multiple inputs	239
4.7.3	Discrete-time equivalent of the double integrator	244
4.8	H_2 and H_∞ low-gain theory	254
4.8.1	Properties of H_2 and H_∞ low-gain sequences	256
4.8.2	Existence of H_2 and H_∞ low-gain sequences	261
4.8.3	Design of H_2 low-gain sequences	264
4.8.4	Design of H_∞ low-gain sequences	274
4.8.5	Low-gain and delay	283
4.A	Proof of Lemma 4.70	298
4.B	Proof of Lemma 4.71	308
4.C	Existence of H_2 optimal controller	327
4.D	Continuity of solution of CQMI and DARE	327
4.E	Proofs of Lemmas 4.92, 4.95, and 4.98	334
5	Robust semi-global internal stabilization	339
5.1	Introduction	339
5.2	Generalized saturation functions: continuous time	339
5.3	Generalized saturation functions: discrete time	343

5.4	Systems with saturation and input-additive uncertainty: continuous time	347
5.4.1	State feedback results	349
5.4.2	Measurement feedback results	353
5.5	Systems with saturation and matched uncertainty: continuous time	360
5.5.1	State feedback results	362
5.5.2	Measurement feedback results	366
5.6	Systems with saturation and uncertainty: discrete time	373
5.7	Saturation with deadzone	374
5.7.1	Continuous time	375
5.7.2	Discrete time	379
6	Control magnitude and rate saturation	381
6.1	Introduction	381
6.2	Modeling issues: standard magnitude + rate saturation operator	383
6.2.1	Discrete time	384
6.2.2	Continuous time	385
6.3	Preliminaries and problem statements	388
6.4	Semi-global stabilization via low-gain feedback	390
6.5	Semi-global stabilization via low-and-high-gain feedback	394
7	State and input constraints: Semi-global and global stabilization in admissible set	401
7.1	Introduction	401
7.2	Problem formulations	402
7.3	A taxonomy of constraints	407
8	Solvability conditions and design for semi-global and global stabilization in the admissible set	411
8.1	Introduction	411
8.2	Semi-global and global stabilization in admissible set for right-invertible constraints: continuous time	411
8.2.1	Proofs and construction of controllers	415
8.3	Semi-global and global stabilization in admissible set for non-right-invertible constraints: continuous time	431
8.3.1	Exploration of complexity of non-right-invertible constraints	445
8.4	Semi-global stabilization in admissible set for right-invertible constraints: discrete time	452
8.4.1	Proofs and construction of controllers	458
8.5	Semi-global and global stabilization in admissible set for non-right-invertible constraints: discrete time	464
8.5.1	Exploration of complexity of non-right-invertible constraints	479
8.5.2	Illustrative example	482

8.5.3	Discussion on semi-global stabilization in the presence of both amplitude and rate constraints	488
8.A	Global and semi-global stabilization with constraints and ℓ_2 disturbances	491
8.B	Completion to the proof of Theorem 8.35	494
9	Semi-global stabilization in the recoverable region: properties and computation of recoverable regions	497
9.1	Introduction	497
9.2	Preliminaries	498
9.3	Properties and computational issues of the recoverable region	499
9.3.1	Continuous-time systems	501
9.3.2	Discrete-time systems	507
9.4	Semi-global stabilization in the recoverable region	511
9.4.1	Continuous-time systems	513
9.4.2	Discrete-time systems	520
9.A	Proof of Lemma 9.6	528
9.B	Proof of Theorem 9.13	529
9.C	Proof of Lemma 9.20	530
9.D	Proof of Lemma 9.21	531
9.E	Proof of Theorem 9.22	534
10	Sandwich systems: state feedback	539
10.1	Introduction	539
10.2	Preliminaries and problem formulations	543
10.3	Necessary and sufficient conditions for stabilization	545
10.3.1	Single-layer sandwich systems	545
10.3.2	Single-layer sandwich systems subject to actuator saturation	546
10.3.3	Multilayer sandwich systems	548
10.4	Generalized and adaptive-low-gain design for single-layer systems	549
10.4.1	Continuous-time systems	549
10.4.2	Discrete-time systems	554
10.5	Low-gain design for single-layer systems with actuator saturation	558
10.5.1	Continuous-time systems	558
10.5.2	Discrete-time systems	563
10.6	Low-gain design for multilayer systems with actuator saturation	568
10.6.1	Generalized low-gain design for semi-global stabilization	570
10.6.2	Generalized adaptive-low-gain design for global stabilization	573
10.7	Low-and-high-gain design for single-layer systems	577
10.7.1	Continuous-time systems	577
10.7.2	Discrete-time systems	582

10.8 Numerical examples	589
10.8.1 Continuous-time systems	589
10.8.2 Discrete-time systems	594
11 Simultaneous external and internal stabilization	607
11.1 Introduction	607
11.2 Simultaneous stabilization in global framework: problem statements	609
11.3 Simultaneous stabilization in semi-global framework: problem statements	615
12 Simultaneous external and internal stabilization: input-additive case	617
12.1 Introduction	617
12.2 Simultaneous stabilization in a global framework: continuous time	618
12.2.1 State feedback	619
12.2.2 Measurement feedback	633
12.3 Simultaneous stabilization in a global framework: discrete time	636
12.3.1 State feedback	636
12.3.2 Measurement feedback	659
12.4 ISS stabilization with state feedback: continuous time	661
12.5 ISS stabilization with state feedback: discrete time	664
12.6 Achieving (G_p/G) and $(G_p/G)_{fg}$ with a linear control law	667
12.6.1 $(G_p/G)_{fg}$ problem with state feedback for neutrally stable systems: continuous time	667
12.6.2 $(G_p/G)_{fg}$ problem with state feedback for neutrally stable systems: discrete time	671
12.7 Simultaneous stabilization in a semi-global framework: continuous time	672
12.7.1 State feedback	672
12.7.2 Measurement feedback	679
12.8 Simultaneous stabilization in a semi-global framework: discrete time	680
12.8.1 State feedback	680
12.8.2 Measurement feedback	682
12.9 Role of the location of the open-loop poles of the system	683
12.9.1 Continuous-time systems	686
12.9.2 Discrete-time systems	687
12.A Appendix: a preliminary lemma	692
12.B Appendix: controller of the form $u = B' f(x_u)$ for discrete-time systems	694

13 Simultaneous external and internal stabilization:	
non-input-additive case	697
13.1 Introduction	697
13.2 Simultaneous stabilization in global framework	697
13.3 Semi-global external stabilization and global asymptotic stabilization	703
13.4 L_p (ℓ_p) stabilization for $p \in [1, \infty)$ of open-loop neutrally stable linear systems with saturated linear control laws	707
13.4.1 Continuous-time systems	708
13.4.2 Discrete-time systems	711
13.4.3 Generalization of L_p (ℓ_p) stability results	715
13.A Appendix: Some Preliminary Lemmas	717
13.B Some inequalities	719
14 The double integrator with linear control laws subject to saturation	723
14.1 Introduction	723
14.2 L_p stability: non-input-additive case	724
14.3 Further examination of L_∞ stability for non-input-additive disturbances	734
14.4 L_p stability: input-additive case	740
14.5 Input-to-state stability	743
14.6 Stable response under integral-bounded non-input-additive disturbances	748
14.6.1 Integral-bounded disturbances with DC bias	751
14.6.2 Sinusoidal disturbances with DC bias	754
14.A Appendix	755
15 Simultaneous internal and external stabilization in the presence of a class of non-input-additive sustained disturbances:	
continuous time	757
15.1 Introduction	757
15.2 Preliminaries	758
15.3 Neutrally stable systems	759
15.4 Critically unstable systems	765
16 Simultaneous internal and external stabilization in the presence of a class of non-input-additive sustained disturbances:	
discrete time	779
16.1 Introduction	779
16.2 Preliminaries	779
16.3 Neutrally stable systems	780
16.3.1 Single-frequency systems	781
16.3.2 Multifrequency systems	783

16.4	Critically unstable systems	785
16.4.1	Formulation	785
16.A	Proofs of some lemmas	796
17	External and internal stabilization under the presence of stochastic disturbances	801
17.1	Introduction	801
17.2	Problem formulation	802
17.3	Open-loop neutrally stable systems	804
17.3.1	Proofs for the discrete-time case	804
17.3.2	Proofs for the continuous-time case	809
17.4	Double-integrator system	813
17.A	Appendix	820
	References	821
	Index	835
