

Contents

	<i>Preface</i>	<i>page ix</i>
	<i>List of abbreviations</i>	<i>xiii</i>
1	A brief history of the Internet	1
1.1	The early times	2
1.2	The rapid growth	4
1.3	The network of networks: a growing self-organized system	7
2	How the Internet works	10
2.1	Physical description	10
2.2	Protocols	12
2.3	Internet addressing	14
2.4	Routing packets	15
2.5	The domain name system	18
3	Measuring the global Internet	19
3.1	Mapping of the Internet	20
3.2	A Ptolemaic view	23
3.3	An x-ray scan of the Internet	26
3.4	AS level maps	30
3.5	Internet geography	33
3.6	The Internet's global performance	34
4	The Internet's large-scale topology	36
4.1	The growth of the Internet	37
4.2	Small-world properties	42
4.3	Heavy tailed distributions	45
4.4	Critically examining scale-free properties	51
4.5	The hierarchical structure of the Internet	57
4.6	The Internet's geographical layout	65

vi	<i>Contents</i>	
5	Modeling the Internet	69
5.1	Static random graph models	70
5.2	The Watts–Strogatz model	76
5.3	Internet topology generators	79
5.4	The theory of evolving networks	84
5.5	The Barabási–Albert class of models	87
5.6	Preferential attachment revisited	91
5.7	Validating the preferential attachment hypothesis	93
5.8	Degree driven models	95
5.9	Optimization and trade-offs	104
5.10	Real data versus models	107
5.11	The future of Internet modeling	109
6	Internet robustness	112
6.1	Internet robustness to random failures	113
6.2	Resilience to damage as a percolation phase transition	118
6.3	Percolation theory	121
6.4	Percolation transition in random graphs	125
6.5	The theory of resilience to random failures	128
6.6	Internet’s Achilles heel	132
6.7	The price of a fail-safe Internet	139
7	Virtual and social networks in the Internet	140
7.1	The World Wide Web	141
7.2	Modeling the Web	148
7.3	The e-mail network	156
7.4	Peer-to-peer and dynamic environment networks	161
8	Searching and walking on the Internet	166
8.1	Searching strategies in networks	167
8.2	Improving the performance of peer-to-peer networks	173
8.3	Searching on the Web	175
9	Epidemics in the Internet	180
9.1	Computer viruses and worms	181
9.2	Epidemic modeling in population networks	187
9.3	Puzzling questions raised by computer virus data	191
9.4	Epidemics in scale-free networks	193
9.5	Numerical simulation of epidemics in network models	201
9.6	Rationalizing computer virus experimental data	204
9.7	Immunization of scale-free networks	205
9.8	Protecting the Internet	208

	<i>Contents</i>	vii
10	Beyond the Internet’s skeleton: traffic and global performance	211
10.1	The Internet traffic: a local view	212
10.2	The global behavior of the Internet traffic and performance	217
10.3	Internet stability and congestion	222
11	Outlook	226
Appendix 1	Graph theory applied to topology analysis	229
Appendix 2	Interface resolution and router topology	238
Appendix 3	Numerical analysis of heavy tailed distributions	240
Appendix 4	Degree correlations	243
Appendix 5	Scale-free networks: scaling relations	246
Appendix 6	The SIR model of virus propagation	249
	<i>References</i>	253
	<i>Index</i>	265
