<i>Preface</i>	<i>page x</i>
<i>Acknowledgements</i>	<i>xiii</i>
1 A background in graph spectra	1
1.1 Basic notions and results	1
1.2 The graph isomorphism problem and cospectral graphs	6
1.3 Spectral characterizations of certain classes of graphs	11
1.3.1 Characterizations by spectra	11
1.3.2 Characterizations by spectral properties	15
1.3.3 Characterizations by a combination of spectral and non-spectral properties	19
1.4 The search for complete sets of invariants	20
2 Eigenvectors of graphs	22
2.1 Some fundamental results	22
2.2 The number of walks in a graph	24
2.3 Eigenspaces of NEPS	30
2.4 Divisors of a graph	37
2.5 The automorphism group and eigenvectors	43
2.6 Eigenspaces of line graphs	45
3 Eigenvector techniques	49
3.1 Rayleigh quotients	49
3.2 Comparing vectors	56
3.3 Biquadratic forms	60
3.4 Implicit functions	63
3.5 More extremal index problems	65
4 Graph angles	75
4.1 Motivation and definitions	75
4.2 Elementary properties of graph angles	80
4.3 Graph transformations and angles	85

viii	<i>Contents</i>	
4.4	Angles and components	95
4.5	Main angles	97
5	Angle techniques	105
5.1	Angles and cospectral graphs	105
5.2	Ordering unicyclic graphs	109
5.3	Constructing graphs with given eigenvalues and angles	111
5.3.1	Constructing trees	111
5.3.2	Constructing unicyclic and bicyclic graphs	114
5.3.3	Tree-like cubic graphs	116
5.3.4	Fuzzy images of graphs	121
5.4	The Ulam graph reconstruction problem	126
6	Graph perturbations	132
6.1	Introduction	132
6.2	First observations	133
6.3	An analytical theory of perturbations	136
6.4	An algebraic theory of perturbations	142
6.4.1	Introduction	142
6.4.2	Intermediate eigenvalue problems of the second type	143
6.4.3	A perturbation which preserves degrees	144
6.4.4	Further applications and examples	147
7	Star partitions	150
7.1	Introduction	150
7.2	Characterizations of star partitions	153
7.3	Structural considerations	157
7.4	Reconstruction and extension	161
7.5	Operations on graphs	167
7.6	Application to graph dominance	171
7.7	Some enumerative considerations	177
7.8	Miscellaneous results	182
7.8.1	An alternative existence proof	182
7.8.2	More on polynomial partitions	183
7.8.3	Line star partitions	189
8	Canonical star bases	191
8.1	Introduction	191
8.2	Canonical star bases and weighted graphs	194
8.3	Algorithms for finding a star partition	198
8.4	Graphs with distinct eigenvalues	205
8.5	The maximal clique problem and bounded multiplicities	208
8.6	Strongly regular graphs	211

Cambridge University Press
0521573521 - Eigenspaces of Graphs
D. Cvetkovic, P. Rowlinson and S. Simic
Table of Contents
[More information](#)

<i>Contents</i>		ix
9	Miscellaneous results	216
9.1	Graph structure related to eigenvector components	216
9.2	Graphs with small second largest eigenvalue	223
9.3	Bond order and electron charges	226
9.4	Certain 3-decompositions of complete graphs	228
<i>Appendix A</i> Some results from matrix theory		232
<i>Appendix B</i> A table of graph angles		234
<i>Bibliography</i>		239
<i>Index</i>		256
