	Introduction	1
	Stewart Jones and David A. Hensher	
1	A statistical model for credit scoring	14
	William H. Greene	
2	Mixed logit and error component models of corporate insolvency and bankruptcy risk	44
	David A. Hensher and Stewart Jones	
3	An evaluation of open- and closed-form distress prediction models: The nested logit and latent class models	80
	Stewart Jones and David A. Hensher	
4	Survival analysis and omitted dividends	114
	Marc J. Leclerc	
5	Non-parametric methods for credit risk analysis: Neural networks and recursive partitioning techniques	137
	Maurice Peat	
6	Bankruptcy prediction and structural credit risk models	154
	Andreas Charitou, Neophytos Lambertides and Lenos Trigeorgis	
7	Default recovery rates and LGD in credit risk modelling and practice: An updated review of the literature and empirical evidence	175
	Edward I. Altman	

vi	Contents	
8	Credit derivatives: Current practices and controversies Stewart Jones and Maurice Peat	207
9	Local government distress in Australia: A latent class regression analysis Stewart Jones and Robert G. Walker	242
10	A belief-function perspective to credit risk assessments Rajendra P. Srivastava and Stewart Jones	269
