Contents

1 Introduction 1
1.1 Background of Research 1
1.2 Problem Statement 6
1.3 Objectives 6
1.4 Scope of Project 7
1.5 Contribution of Book 7
References 8

2 Medicine and Engineering Related Researches on the Utility of Two Dimensional Nuchal Translucency 11
2.1 Review of Trisomy 21 11
2.2 History of Trisomy 21 Detection 12
2.3 Maternal Age Factor 13
2.4 Effect of Previous Pregnancies Factor 14
2.5 Existing Detection Methods of Trisomy 21 15
2.5.1 Ultrasound 15
2.5.2 Maternal Serum Markers 17
2.5.3 Genetic Testing 17
2.5.4 Summary 18
2.6 Two Dimensional Nuchal Translucency 21
2.6.1 Medicine Review and Related Researches 21
2.6.2 Engineering Review and Related Researches 24
2.7 Three Dimensional Ultrasound Applications 37
2.7.1 Summary 39
References 41

3 Designs and Implementation of Three Dimensional Nuchal Translucency 47
3.1 Introduction 47
3.2 Data Acquisition 49
3.3 DICOM and Clips Storage 52
3.4 3D Nuchal Translucency Reconstruction and Visualization 55

3.4.1 Three Dimensional Scanning Acquisitions 60
3.4.2 3D Volumetric Rendering 66
3.5 Three Dimensional Nuchal Translucency Segmentation 75
3.5.1 Pre-Processing 3D Diffusion 78
3.5.2 Three Dimensional Seeded Region-Based Segmentation . . . 84
3.5.3 Three Dimensional Nuchal Translucency In Vivo Measurement 90
References 93

4 Clinical Tests and Measurements 95
4.1 Introduction 95
4.2 Descriptive Analysis 96
4.3 Intra Observer Variability 99
4.4 Level Agreement Between Measurements 101
4.4.1 Paired Sample t-Test 104
4.5 Methods Repeatability 104
4.6 Summary 106
4.7 Discussion 106
4.7.1 Advantages and Disadvantages of Early Fetal Abnormalities Detection 107
References 108

5 Future Improvements 109
5.1 Conclusions 109
5.2 Limitations and Recommendations 110
5.2.1 The Need of Scanning Systems Improvement 110
5.2.2 The Need of Image and Position for Freehand Acquisition Improvement 111
5.2.3 The Need of Algorithms for Fully Automated Segmentation 111
References 111

Glossary 113
