|---------------------------------------------------|---------------|
| <i>Preface</i>                                    | <i>page</i> x |
| <i>Acknowledgements</i>                           | xi            |
| <b>Part I Getting started</b>                     | <b>1</b>      |
| <b>1 The basics of Bayesian analysis</b>          | <b>3</b>      |
| 1.1 General principles                            | 3             |
| 1.2 Prediction                                    | 5             |
| 1.3 Sequential updating                           | 6             |
| 1.4 Markov chain Monte Carlo                      | 7             |
| 1.5 Goal of this book                             | 11            |
| 1.6 Further reading                               | 13            |
| <b>2 Getting started with WinBUGS</b>             | <b>16</b>     |
| 2.1 Installing WinBUGS, Matbugs, R, and R2WinBugs | 16            |
| 2.2 Using the applications                        | 17            |
| 2.3 Online help, other software, and useful URLs  | 32            |
| <b>Part II Parameter estimation</b>               | <b>35</b>     |
| <b>3 Inferences with binomials</b>                | <b>37</b>     |
| 3.1 Inferring a rate                              | 37            |
| 3.2 Difference between two rates                  | 39            |
| 3.3 Inferring a common rate                       | 43            |
| 3.4 Prior and posterior prediction                | 45            |
| 3.5 Posterior prediction                          | 47            |
| 3.6 Joint distributions                           | 49            |
| <b>4 Inferences with Gaussians</b>                | <b>54</b>     |
| 4.1 Inferring a mean and standard deviation       | 54            |
| 4.2 The seven scientists                          | 56            |
| 4.3 Repeated measurement of IQ                    | 58            |

|          |                                              |     |
|----------|----------------------------------------------|-----|
| <b>5</b> | <b>Some examples of data analysis</b>        | 60  |
| 5.1      | Pearson correlation                          | 60  |
| 5.2      | Pearson correlation with uncertainty         | 62  |
| 5.3      | The kappa coefficient of agreement           | 65  |
| 5.4      | Change detection in time series data         | 68  |
| 5.5      | Censored data                                | 70  |
| 5.6      | Recapturing planes                           | 73  |
| <b>6</b> | <b>Latent-mixture models</b>                 | 77  |
| 6.1      | Exam scores                                  | 77  |
| 6.2      | Exam scores with individual differences      | 79  |
| 6.3      | Twenty questions                             | 82  |
| 6.4      | The two-country quiz                         | 84  |
| 6.5      | Assessment of malingering                    | 88  |
| 6.6      | Individual differences in malingering        | 90  |
| 6.7      | Alzheimer’s recall test cheating             | 93  |
|          | <b>Part III Model selection</b>              | 99  |
| <b>7</b> | <b>Bayesian model comparison</b>             | 101 |
| 7.1      | Marginal likelihood                          | 101 |
| 7.2      | The Bayes factor                             | 104 |
| 7.3      | Posterior model probabilities                | 106 |
| 7.4      | Advantages of the Bayesian approach          | 107 |
| 7.5      | Challenges for the Bayesian approach         | 110 |
| 7.6      | The Savage–Dickey method                     | 113 |
| 7.7      | Disclaimer and summary                       | 116 |
| <b>8</b> | <b>Comparing Gaussian means</b>              | 118 |
| 8.1      | One-sample comparison                        | 119 |
| 8.2      | Order-restricted one-sample comparison       | 121 |
| 8.3      | Two-sample comparison                        | 124 |
| <b>9</b> | <b>Comparing binomial rates</b>              | 127 |
| 9.1      | Equality of proportions                      | 127 |
| 9.2      | Order-restricted equality of proportions     | 129 |
| 9.3      | Comparing within-subject proportions         | 132 |
| 9.4      | Comparing between-subject proportions        | 136 |
| 9.5      | Order-restricted between-subjects comparison | 139 |

|                                                      |     |
|------------------------------------------------------|-----|
| <b>Part IV Case studies</b>                          | 143 |
| <b>10 Memory retention</b>                           | 145 |
| 10.1 No individual differences                       | 146 |
| 10.2 Full individual differences                     | 149 |
| 10.3 Structured individual differences               | 152 |
| <b>11 Signal detection theory</b>                    | 156 |
| 11.1 Signal detection theory                         | 156 |
| 11.2 Hierarchical signal detection theory            | 161 |
| 11.3 Parameter expansion                             | 164 |
| <b>12 Psychophysical functions</b>                   | 168 |
| 12.1 Psychophysical functions                        | 168 |
| 12.2 Psychophysical functions under contamination    | 172 |
| <b>13 Extrasensory perception</b>                    | 176 |
| 13.1 Evidence for optional stopping                  | 177 |
| 13.2 Evidence for differences in ability             | 180 |
| 13.3 Evidence for the impact of extraversion         | 184 |
| <b>14 Multinomial processing trees</b>               | 187 |
| 14.1 Multinomial processing model of pair-clustering | 187 |
| 14.2 Latent-trait MPT model                          | 190 |
| <b>15 The SIMPLE model of memory</b>                 | 196 |
| 15.1 The SIMPLE model                                | 196 |
| 15.2 A hierarchical extension of SIMPLE              | 201 |
| <b>16 The BART model of risk taking</b>              | 206 |
| 16.1 The BART model                                  | 207 |
| 16.2 A hierarchical extension of the BART model      | 209 |
| <b>17 The GCM model of categorization</b>            | 212 |
| 17.1 The GCM model                                   | 212 |
| 17.2 Individual differences in the GCM               | 216 |
| 17.3 Latent groups in the GCM                        | 218 |
| <b>18 Heuristic decision-making</b>                  | 224 |
| 18.1 Take-the-best                                   | 224 |
| 18.2 Stopping                                        | 227 |
| 18.3 Searching                                       | 230 |
| 18.4 Searching and stopping                          | 234 |

|                                                   |     |
|---------------------------------------------------|-----|
| <b>19 Number concept development</b>              | 237 |
| 19.1 Knower-level model for Give-N                | 238 |
| 19.2 Knower-level model for Fast-Cards            | 245 |
| 19.3 Knower-level model for Give-N and Fast-Cards | 247 |
