	<i>Preface</i>	xi
1	<b>Historical overview</b>	1
1.1	Historical introduction	1
1.2	Chronology of the development of the subject of stellar winds	5
1.3	Conclusions	6
1.4	Suggested reading	7
2	<b>Observations of stellar winds</b>	8
2.1	The formation of spectral lines in stellar winds	10
2.2	P Cygni profiles	13
2.3	Emission lines from winds	21
2.4	The infrared and radio excess from stellar winds	25
2.5	Molecular emission lines from the winds of cool stars	31
2.6	The infrared and millimeter radiation from dust	39
2.7	Mass loss rates and terminal velocities of winds from hot stars	46
2.8	Mass loss rates and terminal velocities of winds from cool stars	52
2.9	Conclusions	57
2.10	Suggested reading	58
3	<b>Basic concepts: isothermal winds</b>	60
3.1	Isothermal winds with gas pressure only	60
3.2	Isothermal winds with an $f \sim r^{-2}$ force	70
3.3	Isothermal winds with an $f \sim v(dv/dr)$ force	78
3.4	Isothermal winds with general additional forces	80
3.5	The analogy of rocket nozzles	82

---

3.6	Conclusions about isothermal winds	90
3.7	Suggested reading	91
<b>4</b>	<b>Basic concepts: non-isothermal winds</b>	<b>92</b>
4.1	Winds with momentum and energy deposition	93
4.2	Polytropic winds	102
4.3	The critical point of momentum equations with multiple zero-points	112
4.4	Conclusions about non-isothermal winds	116
4.5	Suggested reading	117
<b>5</b>	<b>Coronal winds</b>	<b>118</b>
5.1	The energy of a coronal wind with heat conduction	119
5.2	The momentum equation	121
5.3	The calculation of coronal wind models	123
5.4	A model for the solar corona	123
5.5	Mass loss rates and terminal velocities of coronal winds	125
5.6	Conclusions	126
5.7	Suggested reading	127
<b>6</b>	<b>Sound wave driven winds</b>	<b>128</b>
6.1	A particle in an oscillatory field	128
6.2	The acoustic wave luminosity	131
6.3	The pressure due to acoustic waves	134
6.4	Sound wave driven winds without dissipation	135
6.5	Sound wave driven winds with dissipation	141
6.6	Conclusions	143
6.7	Suggested reading	144
<b>7</b>	<b>Dust driven winds</b>	<b>145</b>
7.1	The physical processes of dust driven winds	147
7.2	The momentum of a continuum driven wind	151
7.3	Dust grain opacities	154
7.4	The temperature of grains and the wind inner boundary	161
7.5	Combined dust and gas flow	165
7.6	The mass loss rate of a dust driven wind	168
7.7	The supersonic structure of dust driven winds	172
7.8	Limits on the mass loss rates of dust driven winds	176
7.9	Conclusions	184
7.10	Suggested reading	185

---

<b>8</b>	<b>Line driven winds</b>	187
8.1	Physical processes in line driven winds	188
8.2	The energy and momentum of line driven winds	193
8.3	The absorption of photons in an expanding atmosphere	198
8.4	The Sobolev approximation	201
8.5	The radiative acceleration due to spectral lines	208
8.6	A realistic estimate of the radiative force due to lines	216
8.7	Line driven winds in the point source limit	222
8.8	A physical explanation of the line driven wind models	232
8.9	The correction for the finite size of the star	234
8.10	Multiple scattering	241
8.11	Wind blanketing	245
8.12	Rotating line driven winds	246
8.13	The instability of line driven winds	248
8.14	Conclusions	252
8.15	Suggested reading	253
<b>9</b>	<b>Magnetic rotator theory</b>	255
9.1	The equatorial wind theory	257
9.2	The angular momentum and energy constants	261
9.3	Angular momentum transfer	263
9.4	The purely radial wind equations	264
9.5	Magnetic energy transfer	265
9.6	Solution of the radial equation of motion	270
9.7	The fast magnetic rotator equations	275
9.8	The spin down times	286
9.9	Magnetic rotators in combination with other wind forces	288
9.10	Conclusions	291
9.11	Suggested reading	292
<b>10</b>	<b>Alfvén wave driven winds</b>	294
10.1	The wind equations with a varying transverse <b>B</b> field	296
10.2	The propagation of Alfvén waves	300
10.3	The radial momentum equation	304
10.4	Cold Alfvén wave driven winds	307
10.5	Conclusions	316
10.6	Suggested reading	317
<b>11</b>	<b>Outflowing disks from rotating stars</b>	319
11.1	Stars with outflowing disks	320

---

11.2	Outflowing disks formed by rotation induced bi-stability	321
11.3	The wind compression model	331
11.4	Disk formation	346
11.5	2-D hydrodynamical results	349
11.6	Conclusions	351
11.7	Suggested reading	353
<b>12</b>	<b>Winds colliding with the interstellar medium</b>	<b>355</b>
12.1	The structure of wind-ISM interaction regions	356
12.2	The evolution of a wind bubble	362
12.3	The snowplow expansion of a wind bubble	365
12.4	Ring nebulae around Wolf-Rayet and newly formed O stars	370
12.5	Planetary nebulae	372
12.6	The deposition of mass and energy into the ISM	377
12.7	Conclusions	382
12.8	Suggested reading	383
<b>13</b>	<b>The effects of mass loss on stellar evolution</b>	<b>385</b>
13.1	The main effects of mass loss	385
13.2	The evolution of a 60 $M_{\odot}$ star with mass loss	388
13.3	The evolution of a 3 $M_{\odot}$ star with mass loss	391
13.4	Conclusions	397
13.5	Suggested reading	397
<b>14</b>	<b>Problems</b>	<b>398</b>
14.1	Answers	407
APPENDIX 1 The chronology of stellar wind studies		409
APPENDIX 2 Elements of thermodynamics		416
APPENDIX 3 De l'Hopital's rule for equations with a singular point		421
APPENDIX 4 Physical and astronomical constants		423
Bibliography		424
Object index		433
Index		434
