1	Modeling Omnidirectional Vision Systems	1
1.1	Introduction	1
1.2	Sphere Camera Model	4
1.2.1	Projections of Lines	5
1.2.2	Relation Between the Real Catadioptric System and the Sphere Camera Model	6
1.3	Lifted Coordinates and Matrices	9
1.3.1	Lifted Coordinates and Matrices Using the Γ Operator	9
1.3.2	Lifted Coordinates and Matrices Using Symmetric Matrix Equations	10
1.4	Generic Projection to Build a Metric for a Riemannian Manifold	11
1.4.1	Paracatadioptric System: An Example	12
2	Calibration of Omnidirectional Cameras Using a DLT-Like Approach	15
2.1	Introduction	15
2.2	Generic Projection Matrix P_{cata}	16
2.2.1	Computation of the Generic Projection Matrix	17
2.3	Generic Projection Matrix and Calibration	18
2.3.1	Other Parameters of Nonlinear Calibration	20
2.3.2	Algorithm to Compute P_{cata}	21
2.4	Theoretical and Practical Issues	21
2.4.1	Three Planes are Needed to Compute P_{cata} Using Linear Equations	22
2.4.2	Adding Constraints to Estimate the Projection Matrix from Points on Two Planes Only	22

2.5	Calibration Experiments with a Simulated Environment	24
2.5.1	Estimation Errors for Different Camera Types	25
2.5.2	Tilting and Distortion	28
2.6	Experiments with Real Images Using a 3D Pattern	28
2.6.1	Intrinsic Parameters	29
2.6.2	Extrinsic Parameters	30
2.6.3	Structure from Motion	31
2.7	Closure	32
3	Comparison of Calibration Methods for Omnidirectional Cameras	33
3.1	Introduction	33
3.2	Classification of Calibration Methods for Omnidirectional Cameras	37
3.3	Calibration Methods Analyzed	39
3.3.1	Sphere-2D Pattern Approach	39
3.3.2	Sphere-Lines Approach	39
3.3.3	DLT-Like Approach	40
3.3.4	Distortion-2DPattern Approach	41
3.4	Experiments	42
3.4.1	Evaluation Criteria	43
3.4.2	Hypercatadioptric System	47
3.4.3	Fish-Eye Lens	49
3.4.4	Unknown-Shape Catadioptric System	52
3.4.5	NonCentral Hypercatadioptric System	53
3.4.6	Distribution of the Calibration Points in the Catadioptric Image	56
3.4.7	Discussion	62
3.5	Closure	64
4	Two-View Relations Between Omnidirectional and Conventional Cameras	65
4.1	Introduction	65
4.2	Related Work	66
4.3	Hybrid Two-View Relations of Uncalibrated Images	68
4.3.1	Hybrid Fundamental Matrices	68
4.3.2	Hybrid Homography	72
4.4	Evaluation of the Hybrid Two-View Models	74
4.4.1	Simulated Data	74
4.4.2	Experiments with Real Images	79
4.5	Automatic Matching Using Hybrid Two-View Relations	81
4.5.1	Hybrid Fundamental Matrix	83
4.5.2	Hybrid Homography	85
4.6	Closure	86

5	Generic Scale-Space for a Camera Invariant	
	Feature Extractor	87
5.1	Introduction	87
5.2	Scale-Space for Central Projection Systems	88
5.2.1	Differential Operators on Riemannian Manifolds	89
5.2.2	Computing a Generic Metric on the Sphere	89
5.2.3	Computing the Generic Metric on the Normalized Plane	91
5.2.4	Generic Laplace–Beltrami Operator.	92
5.2.5	Smoothing Catadioptric Images Using the Generic Laplace–Beltrami Operator.	94
5.3	Experiments	94
5.3.1	Smoothing of Synthetic Images	94
5.3.2	Scale-Space on Real Catadioptric Images.	97
5.3.3	Repeatability Experiment	97
5.4	Closure.	99
6	Orientation of a Hand-Held Catadioptric System in Man-Made Environments.	101
6.1	Introduction	101
6.2	Catadioptric Image Lines (CIL) Computing	103
6.2.1	Catadioptric Image Lines Extraction	104
6.2.2	Distance from a Point to a Conic	105
6.3	Intersection of Two CILs	106
6.4	Vanishing Points	107
6.5	Image Rectification	108
6.6	Experiments	109
6.7	Closure.	109
7	Conclusions	111
	References	115
