Introduction

About this Toolkit

Using Data Analysis to Detect Fraud

About Scripts

Customizing Scripts

1. Start and Menu
Launching the Fraud Toolkit Tests
Starting the Fraud Toolkit Application
Placement of Start and Fraud_Menu Scripts
How the Scripts Work
Start
Fraud Menu
Log Files
Exiting a Script
Working Without the Fraud Menu

2. Completeness and Integrity
Checking for Blanks and Data Type Mismatches
Running Completeness and Integrity
How the Scripts Work
Carriage Returns
Understanding the Verify Command
Understanding the Group Command
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Case Study: General Ledger Accounts Unaccounted For
Organizing Your Data to Find Trends

3. Cross-Tabulation
Organizing Your Data to Find Trends
Running Cross-Tabulation
Benefits of Cross-Tabulation
How the Scripts Work
Challenges of Cross-Tabulation
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Case Study: Not Enough Clients
Case Study: Calling Cards

4. Duplicates

Finding Higher-Risk Items
Running Duplicates
How the Scripts Work
The Role of Sub-Scripts
Case Study: Duplicate Payments
Dup_Dialog Script
If Statements
Dup_Multiple_Keys1
Macro Substitution
Keychange
Define Field
LEN() and HEX()
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Checking for Duplicates
Example—Payroll
Accounts Payable Example

5. Gaps

Identifying Transactions Missing From a Sequence
Running Gaps
How the Scripts Work
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Case Study: Free Calls

6. Data Profile

Establishing Normal Values and investigating Exceptions
Running Data Profile
How the Scripts Work
Data Profile Test Parameters
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Statistics
Stratify
Round Amounts, Exact Multiples, and Frequent Values
Round Amounts—Multiples of 5, 10, 25, or 100
Exact Multiples Of...
Frequently Used Values
Profiling with Character Fields
Items with the Most Exact Multiples
Least/Most Used Items
Case Study: Receipt of Inventory
Case Study: Exact Multiples
Filtering and Drilling Down
Filtering Before Profiling
Filtering After Profiling

7. Ratio Analysis

Pinpointing Suspect Transactions and Trends
Running Ratio Analysis

How the Scripts Work
Max /Max2 and Max /Min Ratios
Two Fields: Num_field1 / Num_field2 Ratio
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Case Study—Dormant but Not Forgotten
Case Study—Doctored Bills

8. Benford's Law

Identifying Anomalous Data
Understanding Benford's Law
Identifying Irregularities
Running Benford Analysis
Running Benford Custom Analysis
Creating the Custom Distribution
Division by Zero
Testing Against the Custom Distribution
How the Scripts Work
Standard Benford Analysis
Benford Custom Analysis
Deleting Temporary Variables, Fields, and Files
Review and Analysis
Case Study: Signing Authority
Further Reading

9. Developing ACL Scripts

Introduction
Data Analysis – generic approach
ACL Commands
DISPLAY Command
SET Command
DELETE Command
OPEN Command
Commands for Defining Relationships
Basic ACL Commands
IF Command
Variables
User-defined Variables
Using System and User-defined Variables
DEFINE Field/Expression
Workspaces
Scripts
RUN ACL script from DOS
Saving a script to a .BAT file
Interactive Scripts
Accept Command
Dialog Boxes
Adding selections to Drop Down and Project Item Lists
Macro-Substitution
Editing Dialog Boxes
Sub-Scripts
Special uses for Sub-Scripts
Consolidation Exercise

Advanced ACL Scripting Techniques
Group Command
Conditional GROUP
Nested GROUP
LOOP and OFFSET
Applications Menu
Building an Application Menu
Creating Sub-menus

10. Utility Scripts

Auto Execute
Extract Values
Ending Balance Verification
Running Total
Maximum and Minimum Values

Appendix 1 - ACL Installation Process

Glossary
