

Signals and Systems

Fundamentals

Bearbeitet von
Gang Li, Liping Chang, Sheng Li

1. Auflage 2015. Buch. XV, 267 S. Kartoniert
ISBN 978 3 11 037811 5
Format (B x L): 17 x 24 cm
Gewicht: 489 g

[Weitere Fachgebiete > Technik > Energietechnik, Elektrotechnik > Elektrotechnik](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beack-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Preface — xi

1 Introduction — 1

- 1.1 Overview of signals and systems — 1
 - 1.1.1 What is a signal? — 1
 - 1.1.2 What is a system? — 2
- 1.2 Description and classification of signals — 6
 - 1.2.1 Continuous-time signals and discrete-time signals — 6
 - 1.2.2 Energy signals and power signals — 10
 - 1.2.3 Periodic signals and nonperiodic signals — 13
 - 1.2.4 Deterministic signals and random signals — 16
 - 1.2.5 Elementary signals — 16
- 1.3 Description of systems — 24
 - 1.3.1 Elementary systems — 24
 - 1.3.2 System modelling — 28
- 1.4 Properties of systems — 31
 - 1.4.1 Memoryless and with memory — 32
 - 1.4.2 Causality — 32
 - 1.4.3 Invertibility — 33
 - 1.4.4 Stability — 34
 - 1.4.5 Time-invariance — 36
 - 1.4.6 Linearity — 37
- 1.5 Summary — 40
- 1.6 Problems — 40

2 Time-domain analysis of LTI systems — 46

- 2.1 Introduction — 46
- 2.2 The unit impulse response and convolutions — 46
 - 2.2.1 The convolution sum — 47
 - 2.2.2 The convolution integral — 52
- 2.3 Properties of convolutions and equivalent systems — 55
- 2.4 Causality and stability of LTI systems — 60
- 2.5 Systems constrained with LCCDEs — 63
 - 2.5.1 Continuous-time systems constrained with LCCDEs — 63
 - 2.5.2 Discrete-time systems characterized by LCCDEs — 67
- 2.6 Summary — 69
- 2.7 Problems — 69

3	Fourier analysis of signals — 73
3.1	Introduction — 73
3.2	Fourier series for continuous-time periodic signals — 74
3.3	Fourier series for discrete-time periodic signals — 85
3.4	Why should a signal be transformed? — 89
3.5	Fourier transform for continuous-time signals — 92
3.5.1	Properties of Fourier transform — 97
3.5.2	Inverse Fourier transform — 106
3.6	The discrete-time Fourier transform — 107
3.6.1	Properties of DTFT — 112
3.6.2	Inverse DTFT — 114
3.7	Fourier series and Fourier transforms — 117
3.8	Summary — 121
3.9	Problems — 122
4	Frequency-domain approach to LTI systems — 128
4.1	Introduction — 128
4.2	Frequency response of LTI systems — 128
4.3	Bode plots for continuous-time LTI systems — 135
4.4	Frequency response of LTIs described with LCCDEs — 139
4.5	Frequency domain approach to system outputs — 143
4.6	Some typical LTI systems — 146
4.6.1	All-pass systems — 147
4.6.2	Linear phase response systems — 148
4.6.3	Ideal filters — 149
4.6.4	Ideal transmission channels — 154
4.7	Summary — 155
4.8	Problems — 155
5	Discrete processing of analog signals — 159
5.1	Introduction — 159
5.2	Sampling of a continuous-time signal — 160
5.3	Spectral relationship and sampling theorem — 160
5.4	Reconstruction of continuous-time signals — 165
5.5	Hybrid systems for discrete processing — 170
5.6	Discrete Fourier transform — 171
5.7	Compressed sensing — 175
5.8	Summary — 177
5.9	Problems — 178

6	Transform-domain approaches — 180
6.1	Motivation — 180
6.2	The Laplace transform — 180
6.2.1	Derivation of the transform — 181
6.2.2	Region of convergence — 182
6.2.3	Inverse Laplace transform — 188
6.2.4	Properties of Laplace transform — 190
6.3	The z -transform — 192
6.3.1	Region of convergence — 193
6.3.2	Properties of the z -transform — 197
6.3.3	Inverse z -transform — 198
6.4	Transform-domain approach to LTI systems — 200
6.4.1	Transfer function of LTI systems — 200
6.4.2	Inverse systems of LTIs and deconvolutions — 203
6.4.3	Revisit of LTI system's stability and causality — 204
6.4.4	Transfer function of LTI systems by LCCDEs — 208
6.5	Transform domain approach to LCCDEs — 210
6.6	Decomposition of LTI system responses — 213
6.7	Unilateral transforms — 216
6.7.1	Unilateral Laplace transform — 216
6.7.2	Unilateral z -transform — 219
6.8	Summary — 220
6.9	Problems — 221
7	Structures and state-space realizations — 226
7.1	Block-diagram representation — 226
7.2	Structures of LTIs with a rational transfer function — 228
7.3	State-space variable representation — 234
7.3.1	State model and state-space realizations — 234
7.3.2	Construction of an equivalent state-space realization — 235
7.3.3	Similarity transformations — 237
7.4	Discretizing a continuous-time state model — 239
7.5	Summary — 242
7.6	Problems — 242
8	Comprehensive problems — 247
8.1	Motivation — 247
8.2	Problems — 247
	Appendices — 253
A.	Proof of the condition of initial rest (1.49) — 253
B.	Proof of Theorem 2.5 — 253

C.	Orthogonality principle —	255
D.	Residue theorem and inverse transforms —	256
E.	Partial-fraction expansion —	260

Bibliography —	263
-----------------------	------------

Index —	265
