|----------------------------------------------------------------------|----|
| <b>List of contributors</b> .....                                    | XV |
| <b>1 Introduction</b> .....                                          | 1  |
| <i>Michael Linden, Andreas Maercker</i>                              |    |
| References .....                                                     | 3  |
| <b>2 Features of embitterment</b> .....                              | 5  |
| 2.1 Embitterment – a larger perspective on a forgotten emotion ..... | 5  |
| <i>Hansjörg Znoj</i>                                                 |    |
| 2.1.1 Embitterment in the context of specific stressors .....        | 5  |
| 2.1.2 A circumplex model of embitterment .....                       | 7  |
| 2.1.3 Research findings .....                                        | 10 |
| 2.1.4 Discussion and outlook .....                                   | 13 |
| References .....                                                     | 15 |
| 2.2 Hope and embitterment .....                                      | 17 |
| <i>Beate Schrank, Astrid Grant Hay</i>                               |    |
| 2.2.1 What is hope? .....                                            | 17 |
| 2.2.2 An overview on hope concepts .....                             | 17 |
| 2.2.3 Why is hope important in psychiatry? .....                     | 22 |
| 2.2.4 Hope and embitterment disorder .....                           | 24 |
| References .....                                                     | 26 |
| 2.3 Embitterment – from the perspective of justice psychology .....  | 30 |
| <i>Claudia Dalbert</i>                                               |    |
| 2.3.1 Injustice and Posttraumatic Embitterment Disorder (PTED) ..... | 30 |
| 2.3.2 The belief in a just world construct .....                     | 31 |
| 2.3.3 Functions of the belief in a just world .....                  | 32 |
| 2.3.4 Belief in a just world operates on an unconscious level .....  | 36 |
| 2.3.5 Conclusions for posttraumatic embitterment disorder .....      | 36 |
| References .....                                                     | 38 |

|       |                                                                                                       |     |
|-------|-------------------------------------------------------------------------------------------------------|-----|
| 2.4   | Revenge after trauma: Theoretical outline . . . . .                                                   | 42  |
|       | <i>Ira Gäbler, Andreas Maercker</i>                                                                   |     |
| 2.4.1 | Introduction: Embitterment and revenge . . . . .                                                      | 42  |
| 2.4.2 | Revenge in the context of trauma . . . . .                                                            | 43  |
| 2.4.3 | Revenge as a coping strategy . . . . .                                                                | 45  |
| 2.4.4 | Toward a definition of revenge . . . . .                                                              | 47  |
| 2.4.5 | A theoretical process model of revenge . . . . .                                                      | 48  |
| 2.4.6 | The course of feelings of revenge . . . . .                                                           | 59  |
| 2.4.7 | Revenge and health . . . . .                                                                          | 60  |
| 2.4.8 | Coming full circle: Therapeutic implications and research perspectives                                | 61  |
|       | References . . . . .                                                                                  | 64  |
| 2.5   | “She looks back without bitterness”: Wisdom as a developmental opposite<br>of embitterment? . . . . . | 70  |
|       | <i>Judith Glück</i>                                                                                   |     |
| 2.5.1 | Wisdom: A developmental opposite of embitterment? . . . . .                                           | 70  |
| 2.5.2 | The psychology of wisdom: A heterogeneous but growing field . . . . .                                 | 71  |
| 2.5.3 | How does wisdom develop? . . . . .                                                                    | 75  |
| 2.5.4 | Can wisdom research inform bitterness research? . . . . .                                             | 78  |
|       | References . . . . .                                                                                  | 80  |
| 2.6   | Personality as risk and resilience in embitterment reactions . . . . .                                | 83  |
|       | <i>Anja Dodek, Sven Barnow</i>                                                                        |     |
| 2.6.1 | Introduction . . . . .                                                                                | 83  |
| 2.6.2 | Level of personality traits . . . . .                                                                 | 84  |
| 2.6.3 | Level of social-cognitive constructs . . . . .                                                        | 85  |
| 2.6.4 | Emotion regulation and Coping . . . . .                                                               | 86  |
| 2.6.5 | Integration: A heuristic model of risk and resilience factors . . . . .                               | 88  |
| 2.6.6 | Research findings . . . . .                                                                           | 89  |
| 2.6.7 | General discussion and outlook . . . . .                                                              | 96  |
|       | References . . . . .                                                                                  | 97  |
| 2.7   | Neurobiological correlates of social exclusion and social pain . . . . .                              | 101 |
|       | <i>Anna Berkefeld, Dieter F. Braus</i>                                                                |     |
| 2.7.1 | Neural network of pain processing . . . . .                                                           | 102 |
| 2.7.2 | Affiliation, exclusion and neuronal correlates of the social pain system                              | 105 |
| 2.7.3 | Major influence factors on the pain system . . . . .                                                  | 109 |
| 2.7.4 | Conclusion . . . . .                                                                                  | 113 |
|       | References . . . . .                                                                                  | 114 |

|                                                                       |            |
|-----------------------------------------------------------------------|------------|
| <b>3 Context of embitterment</b>                                      | <b>119</b> |
| 3.1 Relationships and embitterment                                    | 119        |
| <i>Kurt Hahlweg, Donald H. Baucom</i>                                 |            |
| 3.1.1 Introduction                                                    | 119        |
| 3.1.2 Infidelity                                                      | 120        |
| 3.1.3 Prevalence of PTED in affair-couples                            | 121        |
| 3.1.4 Treatment for infidelity                                        | 123        |
| 3.1.5 Conclusion                                                      | 127        |
| References                                                            | 127        |
| 3.2 Self-regulation of bitterness across the lifespan                 | 129        |
| <i>Carsten Wrosch, Jesse Renaud</i>                                   |            |
| 3.2.1 Goal failure, bitterness, and quality of life                   | 129        |
| 3.2.2 Control attributions and the experience of bitterness           | 130        |
| 3.2.3 Self-regulation of bitterness                                   | 132        |
| 3.2.4 Bitterness in the context of the adult lifespan                 | 135        |
| 3.2.5 Conclusion                                                      | 137        |
| References                                                            | 138        |
| 3.3 Cancer patients: Loss of meaning, demoralization and embitterment | 142        |
| <i>Anja Mehnert, Sigrun Vehling</i>                                   |            |
| 3.3.1 Cancer survivors and their emerging psychosocial problems       | 142        |
| 3.3.2 Conceptual framework for meaning and life purpose               | 144        |
| 3.3.3 Existential issues in cancer                                    | 145        |
| 3.3.4 Demoralization and embitterment in cancer                       | 147        |
| References                                                            | 151        |
| 3.4 Embitterment and the workplace                                    | 154        |
| <i>Beate Muschalla, Michael Linden</i>                                |            |
| 3.4.1 Stressors in the workplace                                      | 154        |
| 3.4.2 Injustice at work                                               | 157        |
| 3.4.3 Employee reactions to injustice at work                         | 159        |
| 3.4.4 Embitterment in the context of work-related conflicts           | 160        |
| 3.4.5 Conclusion                                                      | 162        |
| References                                                            | 163        |

|       |                                                                                                                     |     |
