

Contents: Volume 1 Electroweak interactions, the 'new particles' and the parton model

	Preface	xxi
	Acknowledgements	xxiv
	Notational conventions	xxv
	Note added in proof: the discovery of the top quark (?)	xxxi
	Note added in proof: the demise of the SSC	xxxiii
1	Field theory and pre-gauge theory of weak interactions	1
1.1	A brief introduction to field theory	1
1.2	Pre-gauge theory of weak interactions	6
1.3	The spin and isospin structure	15
	1.3.1 The spin or helicity structure	16
	1.3.2 Relation between particle and antiparticle matrix elements	17
	1.3.3 The isospin structure	18
1.4	Tests of the V - A structure and 'lepton universality'	20
2	The need for a gauge theory	23
2.1	The intermediate vector boson	23
2.2	Towards a renormalizable theory	27
2.3	Gauge symmetry	29
	2.3.1 Global gauge invariance—the Abelian case	30
	2.3.2 Local gauge invariance—the Abelian case	31
	2.3.3 Global gauge invariance—the non-Abelian case	33
	2.3.4 Non-Abelian local gauge invariance—Yang-Mills theories	35
2.4	Freedom to choose the gauge	38
2.5	Summary	39
3	Spontaneous symmetry breaking: the Goldstone theorem	
	and the Higgs phenomenon	40
3.1	Spontaneously broken symmetries in field theory: Goldstone's	
	theorem	41

X	Contents	
3.2	The Higgs mechanism	45
3.3	Unitarity and renormalizability	47
3.4	Summary	48
4	Construction of the standard model	49
4.1	Model building (towards the standard model)	49
4.2	The standard model	50
	4.2.1 Coupling of the gauge bosons to the Higgs scalars	52
	4.2.2 Self-coupling of the gauge bosons	55
	4.2.3 Coupling of the gauge bosons to the leptons	55
4.0	4.2.4 Coupling of the leptons to the Higgs	61
4.3	Discovery of W and Z^0	63
	4.3.1 Discovery of the W boson(?)	63
5	Lowest order tests of the SM in the leptonic sector	67
5.1	Phenomenology of purely leptonic reactions	67
	$\nu_{\rm e}$ e and $\bar{\nu}_{\rm e}$ e elastic scattering	69
	$5.1.2 \nu_{\mu} e^{-} \text{ and } \bar{\nu}_{\mu} e \text{ elastic scattering}$	74
F 0	5.1.3 Inverse μ -decay	76
5.2	A check of the minimal Higgs mechanism	76
5.3	Support for the SM from hadronic collider data	77
	5.3.1 W production and decay in pp collisions 5.3.2 pp collider data	78
5.4	5.3.2 p̄p collider data Concluding remarks	82 87
0.4	Concluding Temarks	01
6	The Higgs boson	90
6.1	Introductory remarks	90
6.2	Higgs decay	91
6.3	Higgs production at the Z^0 mass	95
	$\begin{array}{ll} 6.3.1 & Z^0 \to H f \bar{f} \\ 6.3.2 & Z^0 \to H \gamma \end{array}$	95
6.4	•	96
6.5	Limits on the Higgs mass Concluding comments	97
0.0	Concluding comments	100
7	The standard model beyond lowest order	101
7.1	Radiative corrections	101
7.2	Renormalization and physical parameters	103
7.3	The effective fine structure constant	106
7.4	The muon lifetime revisited	107
7.5	Estimates of one loop corrections	109
7.6	Higher order corrections	110
7.7	Practical problems in testing radiative corrections	112
7.8	Strategies to overcome the imprecision in M_W	113
7.9	Testing the minimal Higgs mechanism	114
7.10	Beyond the standard model	115

	Contents	xi
8	e ⁺ e ⁻ physics and the standard model	118
8.1	Electron-positron storage rings	118
8.2	The new e ⁺ e ⁻ colliders: TRISTAN and LEP	121
8.3	e^+e^- physics at energies $\ll M_Z$	126
8.4	e ⁺ e ⁻ and the standard model	132
8.5	LEP data near the Z^0 peak	133
	8.5.1 e ⁺ e ⁻ angular distributions	134
8.6	Determination of the SM parameters of the Z^0	142
8.7	Neutrino counting	147
	8.7.1 The invisible width method	147
	8.7.2 The single photon method	148
8.8	Asymmetries and polarization measurements at the Z^0 peak	149
8.9	Conclusions	154
9	Extension to the hadrons; quark-lepton universality	157
9.1	Charm, bottom and top	157
9.2	Quark mixing	160
9.3	Electroweak interaction of the quarks	163
9.4	The GIM mechanism	164
9.5	Colour	166
	9.5.1 The quark statistics	166
	$9.5.2 \qquad \pi^0 ightarrow 2 \gamma$	168
	9.5.3 Triangle anomalies	170
	9.5.4 The cross-section for $e^+e^- \rightarrow hadrons$	174
9.6	Summary of the quark sector of the standard model	176
9.7	Quark masses and the KM matrix	179
10	Phenomenology of semi-leptonic reactions	182
10.1	Model independent tests	184
10.2	Parity violation in electron–nucleus scattering	189
10.3	Optical rotation	193
10.4	Summary	201
11	The discovery of the narrow vector resonances	202
11.1	Introduction	202
11.2	The 'new' particles	204
11.3	Some qualitative features of QCD	206
11.4	Quark-lepton parallelism	208
11.5	Flavour classification of hadrons	209
11.6	The J/Ψ and the OZI rule	213
11.7	Experimental status of the J/Ψ spectroscopy	219
	11.7.1 Mass determination of the J/Ψ	224
11.8	Properties of the $J/\Psi(3097)$ and $\Psi'(3685)$	225
	11.8.1 J/Ψ and Ψ' widths	225
	$11.8.2 J^{'PC}$ assignments	228
	11.8.3 I^G assignment	229
11.9	Baryonic decay of J/Ψ	232

xii	Contents	
11.10	The Υ family and its experimental status	234
12	Hidden flavour bound states	240
12.1	Quarkonium	240
	12.1.1 The positronium analogy	241
	12.1.2 The QCD potential	242
	12.1.3 The strength of the potential	245
	12.1.4 Spin dependence of the potential	248
	12.1.5 Comparison with the data	249
12.2	J/Ψ decays. Calculation of the widths	254
12.3	Determination of α_s	260
12.4	Leptonic widths	262
12.5	Exotics: glueballs, hybrids, etc.	264
12.6	$\Psi' \to \varrho \pi$: a puzzle	267
12.7	Conclusions	268
13	Open heavy flavours	269
13.1	Discovery and basic properties of charm and bottom particles	270
	13.1.1 Detection of heavy flavours	276
	13.1.2 Charge of the charm and bottom quarks	279
	13.1.3 Heavy flavour masses	280
13.2	Charm decay	282
	13.2.1 Heavy flavour lifetimes	284
	13.2.2 Purely leptonic charm decays	286
	13.2.3 Semi-leptonic and hadronic decays of charm mesons	287
13.3	B physics	290
	13.3.1 The decay $\bar{B}^0 \to D^{+*}\ell^-\bar{\nu}$	291
13.4	Production of heavy flavours	293
	13.4.1 Theoretical estimates of heavy flavour production	293
13.5	Heavy flavours at LEP	295
	13.5.1 Production of c and b quarks at the Z^0 pole	295
	13.5.2 Production cross-section	296
	13.5.3 Miscellaneous	297
13.6	Final comments	299
14	The heavy lepton $ au$	300
14.1	Introduction	300
14.2	Discovery of the τ lepton	301
14.3	Properties of the τ lepton	304
	14.3.1 The τ mass	304
	14.3.2 The τ lifetime	306
	14.3.3 The spin of the τ	307
	14.3.4 Point-like structure	308
4.4.4	14.3.5 $\tau - e - \mu$ universality	309
14.4	τ decay	309
	14.4.1 Semi-leptonic τ decays	310
145	14.4.2 QCD tests from τ decay	311
14.5	The τ neutrino	312

	Contents	xiii
14.6	Rare $ au$ decays	314
14.7	Miscellaneous and conclusions	314
15	Towards the parton model—deep inelastic scattering	316
15.1	Electron-muon scattering	317
15.2	Elastic electron–proton scattering	321
15.3	Inelastic electron–nucleon scattering	324
15.4	Inelastic neutrino-nucleon scattering	331
15.5	Deep inelastic scattering and scaling behaviour	335
15.6	Polarization effects in deep inelastic scattering	342
16	The quark-parton model	352
16.1	The introduction of partons	352
16.2	Antipartons	359
16.3	Partons as quarks	361
16.4	The detailed quark-parton model	364
	16.4.1 The scaling functions for purely electromagnetic interactions	366
	16.4.2 Charged current scaling functions	368
	16.4.3 Neutrino and antineutrino neutral current scaling functions	373
16.5	Charged lepton induced reactions for Q^2 of order M_Z^2	374
16.6	Behaviour of the quark number densities as $x \to 0$	375
16.7	The missing constituents—gluons	377
16.8	The parton model in polarized deep inelastic scattering	378
16.9	Appendix to Chapter 16: The parton model as an	
	impulse approximation	382
	16.9.1 The parton model as an impulse approximation	382
	16.9.2 The parton model including transverse motion	386
	16.9.3 Current matrix elements in the quark-parton model	393
17	Experimental tests of the quark-parton model	396
17.1	Deep inelastic scaling functions for $Q^2 \ll M_Z^2$	396
	17.1.1 Sum rules and their experimental tests	401
	17.1.2 Polarized scattering sum rule and the 'spin crisis'	405
	17.1.3 The nuclear EMC effect	409
	17.1.4 Experimental status of the scaling functions	416
17.2	Neutrino cross-sections in the quark–parton model for $Q^2 \ll M_Z^2$	416
17.3	Cross-sections in the quark–parton model for Q^2 comparable with M_Z^2	425
17.4	Application of the parton model to related processes	426
	17.4.1 e ⁺ e ⁻ annihilation into hadrons	427
	17.4.2 The Drell-Yan process	428
	17.4.3 Production of heavy mesons by Drell–Yan mechanism	440
	Note added in proof: polarized deep inelastic scattering	442

XIV	Contents	
	Appendix 1: Elements of field theory	443
A1.1	Fields and creation operators	443
A1.2		447
	A1.2.1 Parity	447
	A1.2.2 Charge conjugation	447
	A1.2.3 G-parity	449
A1.3	The S -matrix	449
	Appendix 2: Feynman rules for QED, QCD and the SM	451
A2.1	Relation between S-matrix and Feynman amplitude	451
A2.2	QCD and QED	452
A2.3	The SM	455
A2.4	Some examples of Feynman amplitudes	457
A2.5	Colour sums	459
A2.6	The Gell-Mann $SU(3)$ matrices	462
A2.7	The Fierz reshuffle theorem	463
A2.8	Dimension of matrix elements	464
	Appendix 3: Conserved vector currents and their charges	465
	References	470
	Analytic subject index for vols. 1 and 2	482

Contents: Volume 2 CP Violation, QCD and hard processes

	Preface	xix
	Acknowledgements	xxii
	Notational conventions	xxiii
	Note added in proof: the discovery of the top quark (?)	xxix
	Note added in proof: the demise of the SSC	xxxi
18	Determination of the Kobayashi-Maskawa matrix	1
18.1	KM matrix elements from β -decay reactions	2
18.2	KM matrix elements from deep inelastic scattering	8
18.3	Summary	10
19	Mixing and CP violation	12
19.1	General phenomenology of mixing and CP violation	12
	19.1.1 General formalism for mixing	12
	19.1.2 General formalism for CP violation	15
	19.1.3 Practical aspects of mixing and CP violation	17
19.2	Detailed phenomenology of CP violation in the K^0 – \bar{K}^0 system	23
	19.2.1 Formalism and summary of data	23
	19.2.2 Relation between phenomenological parameters and the CP-violating Hamiltonian	28
19.3	Dynamics of mixing and CP violation	32
10.0	19.3.1 Connection with the SM (weak) Hamiltonian	32
	19.3.2 Estimate for ϵ in the SM	35
	19.3.3 Estimate of ϵ'/ϵ in the SM	40
	19.3.4 Summary on ϵ and ϵ' in the $K^0 - \bar{K}^0$ system	44
19.4	Dynamics of $B^0 - \bar{B}^0$ mixing	45
	19.4.1 Mixing ignoring CP violation	46
	19.4.2 CP violation in the $B^0-\bar{B}^0$ system	48
20	Regularization, renormalization and introduction to the	
	renormalization group	53
20.1	Introduction	53
20.2	Parameters and physical observables in a field theory	54

xvi	Contents	
20.3	The idea of renormalization	56
20.4	Choice of cut-off procedure—regularization	62
20.5	Choice of renormalization scheme	66
	20.5.1 The momentum point subtraction (MPS) scheme	67
	20.5.2 Renormalization schemes specifically linked to dimensional regular-	
	ization (DR)	71
20.6	The renormalization group	73
20.7	A concrete example of different renormalization schemes	76
20.8	Consequences of the renormalization group equation	78
20.9	Scaling and asymptotic freedom	81
20.10	Appendix to Chapter 20	86
	20.10.1 Definition of a d-dimensional integral	86
	20.10.2 Questions of convergence and analytic continuation	87 91
	20.10.3 Some useful d-dimensional integrals 20.10.4 Regularization of the 4-point vertex in ϕ^4 theory	93
	20.10.1 regularization of the 4 points vertex in \$\phi\$ theory	00
21	Gauge theories, QCD and the renormalization group	97
21.1	Introduction	97
21.2	Gauge theories: QED	98
	21.2.1 Retaining Maxwell's equations for the field operators 21.2.2 Modifying Maxwell's equations for the field operators	101 103
21.3	Gauge theories: QCD	103
21.0	21.3.1 Differences between QCD and QED	104
21.4	Feynman rules for QCD	114
	21.4.1 The propagators	114
	21.4.2 The vertices	115
21.5	The renormalization group for QCD	116
	21.5.1 Specification of the renormalization scheme in QCD	117
	21.5.2 Consequences of the renormalization group in QCD	120
21.6	The effect of heavy quarks	121
21.7	The running coupling in QCD	124
01.0	21.7.1 Renormalization scheme dependence of α and Λ	127
21.8	Conclusion	127
22	Applications of the QCD renormalization group	128
22.1	$e^+e^- \to hadrons$	128
22.2	Deep inelastic lepton scattering	135
	22.2.1 The operator product expansion	136
	22.2.2 Relating coefficient functions to moments of structure functions 22.2.3 Renormalization group analysis of coefficient functions	137 142
	22.2.3 Renormalization group analysis of coefficient functions 22.2.4 q ² dependence of the moments in leading order	144
	22.2.5 An interpretation of the Q^2 variation of parton distributions in leading	177
	logarithmic approximation	148
	$22.2.6 q^2$ dependence of the moments in higher order	151
	22.2.7 Conclusion	154
23	The parton model in QCD	155
23.1	Partons in a field theoretic context	155
	23.1.1 Heuristic reinterpretation of simple Feynman diagrams	157
	23.1.2 Application to QCD	160
	23.1.3 The parton model in field theory	163
23.2	QCD corrections to the parton model	168
	23.2.1 Redefinition of $f_{a/h}$	168

	Contents	xvii
	23.2.2 Collinear singularities—their physical origin	171
23.3	Structure of the leading logarithmic terms	174
23.4	Q^2 -dependent distribution functions	180
23.5	Summary of the evolution equations in LLA	186
23.6	Small x behaviour of the Q^2 -dependent gluon distribution in LLA	189
23.7	Behaviour of distributions as $x \to 1$ in LLA	192
23.8	Beyond the LLA	195
23.9	Comparison with experiment in deep inelastic scattering	202
23.10	General form of the QCD-improved parton model	206
23.11	QCD corrections to Drell-Yan and W production	209
20.11	23.11.1 Drell-Yan production	210
	23.11.2 Transverse momentum distribution of Drell-Yan pairs	213
	23.11.3 Hadronic production of W and Z^0	216
	23.11.4 Transverse momentum distribution of W and Z^0	217
23.12	Summary	218
24	Large p_T phenomena and jets in hadronic reactions	219
24.1	Introduction	219
24.2	Historical survey. Hard qq scattering	221
24.3	From quarks to hadrons	225
	24.3.1 Inclusive reactions	225
	24.3.2 Exclusive reactions	228
24.4	Comments on the QCD interpretation of large p_T phenomena	232
	24.4.1 Evidence for jets	233
	24.4.2 Inclusive jet production	234
045	24.4.3 Transverse momentum distribution with respect to the jet axis	239
24.5	Two-jet production at large p_T	239
	24.5.1 Jet angular distribution 24.5.2 Tests of the Q^2 evolution	$\frac{241}{242}$
	24.5.2 Tests of the Q evolution 24.5.3 Hadronic interactions at large p_T revisited	244
24.6	Prompt photons	245
24.7	Two and more jets in the final state	249
24.8	Jet fragmentation	249
24.9	Comments on $O(\alpha_s^3)$ corrections and conclusions	250
	· · ·	250
25	Jets and hadrons in e ⁺ e ⁻ physics	253
25.1	Introduction	253
25.2	General outline of e ⁺ e ⁻ jets	253
05.0	25.2.1 Angular distribution of hadrons produced in e ⁺ e ⁻ collisions	255 258
25.3	SPEAR two-jet events 25.3.1 Sphericity	258 259
	25.3.2 Jet axis	260
	25.3.3 Corrections to $e^+e^- \rightarrow hadrons$: multijets	262
