

CONTENTS

<i>Preface</i>	<i>page ix</i>
5 Inferences for normal distributions	
5.1 Bayes's theorem and the normal distribution	1
5.2 Vague prior knowledge and interval estimates for the normal mean	13
5.3 Interval estimates for the normal variance	26
5.4 Interval estimates for the normal mean and variance	36
5.5 Sufficiency	46
5.6 Significance tests and the likelihood principle	58
Exercises	71
6 Inferences for several normal distributions	
6.1 Comparison of two means	76
6.2 Comparison of two variances	86
6.3 General comparison of two means	91
6.4 Comparison of several means	95
6.5 Analysis of variance: between and within samples	104
6.6 Combination of observations	112
Exercises	122
7 Approximate methods	
7.1 The method of maximum likelihood	128
7.2 Random sequences of trials	141
7.3 The Poisson distribution	153
7.4 Goodness-of-fit tests	157

viii	CONTENTS	
7.5	Goodness-of-fit tests (continued)	<i>page</i> 168
7.6	Contingency tables	176
	Exercises	185
8	Least squares	
8.1	Linear homoscedastic normal regression	203
8.2	Correlation coefficient	214
8.3	Linear hypothesis	221
8.4	Computational methods	236
8.5	Two-way classification	246
8.6	Further applications of linear hypothesis theory	257
	Exercises	270
	Appendix. Two-sided tests for the χ^2-distribution	282
	<i>Bibliography</i>	285
	<i>Subject Index</i>	287
	<i>Index of Notations</i>	292
