Preface	<i>page</i> xv
1 A brief discussion of integral equations	1
1.1 Types of integral equations	1
1.1.1 Volterra integral equations of the second kind	1
1.1.2 Volterra integral equations of the first kind	2
1.1.3 Abel integral equations of the first kind	3
1.1.4 Fredholm integral equations of the second kind	3
1.1.5 Fredholm integral equations of the first kind	3
1.1.6 Boundary integral equations	4
1.1.7 Wiener-Hopf integral equations	5
1.1.8 Cauchy singular integral equations	5
1.2 Compact integral operators	6
1.2.1 Compact integral operators on $C(D)$	7
1.2.2 Properties of compact operators	8
1.2.3 Integral operators on $L^2(a, b)$	11
1.3 The Fredholm alternative theorem	13
1.4 Additional results on Fredholm integral equations	17
1.5 Noncompact integral operators	20
1.5.1 An Abel integral equation	20
1.5.2 Cauchy singular integral operators	20
1.5.3 Wiener-Hopf integral operators	21
Discussion of the literature	21
2 Degenerate kernel methods	23
2.1 General theory	23
2.1.1 Solution of degenerate kernel integral equation	26

viii	<i>Contents</i>	
2.2	Taylor series approximations	29
2.2.1	Conditioning of the linear system	34
2.3	Interpolatory degenerate kernel approximations	36
2.3.1	Interpolation with respect to the variable t	37
2.3.2	Interpolation with respect to the variable s	38
2.3.3	Piecewise linear interpolation	38
2.3.4	Approximate calculation of the linear system	42
2.4	Orthonormal expansions	45
	Discussion of the literature	47
3	Projection methods	49
3.1	General theory	49
3.1.1	Collocation methods	50
3.1.2	Galerkin's method	52
3.1.3	The general framework	54
3.2	Examples of the collocation method	58
3.2.1	Piecewise linear interpolation	59
3.2.2	Collocation with trigonometric polynomials	62
3.3	Examples of Galerkin's method	66
3.3.1	Piecewise linear approximations	66
3.3.2	Galerkin's method with trigonometric polynomials	68
3.3.3	Uniform convergence	70
3.4	Iterated projection methods	71
3.4.1	The iterated Galerkin solution	74
3.4.2	Uniform convergence of iterated Galerkin approximations	75
3.4.3	The iterated collocation solution	77
3.4.4	Piecewise polynomial collocation at Gauss-Legendre nodes	81
3.4.5	The linear system for the iterated collocation solution	85
3.5	Regularization of the solution	86
3.6	Condition numbers	88
3.6.1	Condition numbers for the collocation method	90
3.6.2	Condition numbers based on the iterated collocation solution	94
3.6.3	Condition numbers for the Galerkin method	94
	Discussion of the literature	98
4	The Nyström method	100
4.1	The Nyström method for continuous kernel functions	100

<i>Contents</i>	ix
4.1.1 Properties and error analysis of the Nyström method	103
An asymptotic error estimate	111
Conditioning of the linear system	112
4.1.2 Collectively compact operator approximations	114
4.2 Product integration methods	116
4.2.1 Computation of the quadrature weights	118
4.2.2 Error analysis	120
4.2.3 Generalizations to other kernel functions	122
4.2.4 Improved error results for special kernels	124
4.2.5 Product integration with graded meshes	125
Application to integral equations	132
The relationship of product integration and collocation methods	134
4.3 Discrete collocation methods	135
4.3.1 Convergence analysis for $\{\tau_k\} \not\subset \{t_i\}$	139
4.4 Discrete Galerkin methods	142
4.4.1 The discrete orthogonal projection operator	144
4.4.2 An abstract formulation	147
Discussion of the literature	154
5 Solving multivariable integral equations	157
5.1 Multivariable interpolation and numerical integration	157
5.1.1 Interpolation over triangles	160
Piecewise polynomial interpolation	163
Interpolation error formulas over triangles	165
5.1.2 Numerical integration over triangles	167
Some quadrature formulas based on interpolation	169
Other quadrature formulas	170
Error formulas for composite numerical integration formulas	171
How to refine a triangulation	173
5.2 Solving integral equations on polygonal regions	175
5.2.1 Collocation methods	176
The iterated collocation method and superconvergence	178
5.2.2 Galerkin methods	181
Uniform convergence	183
5.2.3 The Nyström method	184
Discrete Galerkin methods	186
5.3 Interpolation and numerical integration on surfaces	188
5.3.1 Interpolation over a surface	189

x	<i>Contents</i>	
	5.3.2 Numerical integration over a surface	191
	5.3.3 Approximating the surface	192
	5.3.4 Nonconforming triangulations	204
5.4	Boundary element methods for solving integral equations	205
	5.4.1 The Nyström method	205
	Using the approximate surface	207
	5.4.2 Collocation methods	213
	Using the approximate surface	215
	Discrete collocation methods	217
	5.4.3 Galerkin methods	218
	Discrete Galerkin methods	221
5.5	Global approximation methods on smooth surfaces	222
	5.5.1 Spherical polynomials and spherical harmonics	224
	Best approximations	228
	5.5.2 Numerical integration on the sphere	229
	A discrete orthogonal projection operator	232
	5.5.3 Solution of integral equations on the unit sphere	235
	A Galerkin method	236
	A discrete Galerkin method	237
	Discussion of the literature	239
6	Iteration methods	241
6.1	Solving degenerate kernel integral equations by iteration	242
	6.1.1 Implementation	244
6.2	Two-grid iteration for the Nyström method	248
	6.2.1 Iteration method 1 for Nyström's method	249
	Implementation for solving the linear system	254
	Operations count	256
	6.2.2 Iteration method 2 for Nyström's method	258
	Implementation for solving the linear system	261
	Operations count	265
	An algorithm with automatic error control	266
6.3	Two-grid iteration for collocation methods	267
	6.3.1 Prolongation and restriction operators	269
	6.3.2 The two-grid iteration method	272
	An alternative formulation	280
	Operations count	280
6.4	Multigrid iteration for collocation methods	281
	6.4.1 Operations count	288
6.5	The conjugate gradient method	291

<i>Contents</i>	<i>xi</i>
6.5.1 The conjugate gradient method for the undiscretized integral equation	291
Bounds on c_k	296
6.5.2 The conjugate gradient iteration for Nyström's method	298
The conjugate gradient method and its convergence	299
6.5.3 Nonsymmetric integral equations	301
Discussion of the literature	303
7 Boundary integral equations on a smooth planar boundary	306
7.1 Boundary integral equations	307
7.1.1 Green's identities and representation formula	308
7.1.2 The Kelvin transformation and exterior problems	310
7.1.3 Boundary integral equations of direct type	314
The interior Dirichlet problem	315
The interior Neumann problem	315
The exterior Neumann problem	316
The exterior Dirichlet problem	317
7.1.4 Boundary integral equations of indirect type	317
Double layer potentials	318
Single layer potentials	319
7.2 Boundary integral equations of the second kind	320
7.2.1 Evaluation of the double layer potential	324
7.2.2 The exterior Neumann problem	328
7.2.3 Other boundary value problems	333
7.3 Boundary integral equations of the first kind	338
7.3.1 Sobolev spaces	338
The trapezoidal rule and trigonometric interpolation	341
7.3.2 Some pseudodifferential equations	342
The Cauchy singular integral operator	344
A hypersingular integral operator	346
Pseudodifferential operators	349
7.3.3 Two numerical methods	349
A discrete Galerkin method	351
7.4 Finite element methods	359
7.4.1 Sobolev spaces – A further discussion	360
Extensions of boundary integral operators	363
7.4.2 An abstract framework	364
A general existence theorem	367
An abstract finite element theory	372
The finite element solution as a projection	375

xii	<i>Contents</i>	
7.4.3	Boundary element methods for boundary integral equations	376
	Additional remarks	380
	Discussion of the literature	381
8	Boundary integral equations on a piecewise smooth planar boundary	384
8.1	Theoretical behavior	385
8.1.1	Boundary integral equations for the interior Dirichlet problem	387
8.1.2	An indirect method for the Dirichlet problem	389
8.1.3	A BIE on an open wedge	390
8.1.4	A decomposition of the boundary integral equation	394
8.2	The Galerkin method	397
8.2.1	Superconvergence results	403
8.3	The collocation method	404
8.3.1	Preliminary definitions and assumptions	406
	Graded meshes	408
8.3.2	The collocation method	410
	A modified collocation method	412
8.4	The Nyström method	418
8.4.1	Error analysis	421
	Discussion of the literature	425
9	Boundary integral equations in three dimensions	427
9.1	Boundary integral representations	428
9.1.1	Green's representation formula	430
	The existence of the single and double layer potentials	431
	Exterior problems and the Kelvin transform	432
	Green's representation formula for exterior regions	434
9.1.2	Direct boundary integral equations	435
9.1.3	Indirect boundary integral equations	437
9.1.4	Properties of the integral operators	439
9.1.5	Properties of $\mathcal{K}$ and $\mathcal{S}$ when S is only piecewise smooth	442
9.2	Boundary element collocation methods on smooth surfaces	446
9.2.1	The linear system	455
	Numerical integration of singular integrals	457
	Numerical integration of nonsingular integrals	460
9.2.2	Solving the linear system	462
9.2.3	Experiments for a first kind equation	467

<i>Contents</i>	xiii
9.3.1 The collocation method	472
Applications to various interpolatory projections	474
Numerical integration and surface approximation	474
9.3.2 Iterative solution of the linear system	479
9.3.3 Collocation methods for polyhedral regions	486
9.4 Boundary element Galerkin methods	489
9.4.1 A finite element method for an equation of the first kind	492
Generalizations to other boundary integral equations	496
9.5 Numerical methods using spherical polynomial approximations	496
9.5.1 The linear system for $(2\pi + \mathcal{P}_n\hat{K})\hat{\rho}_n = \mathcal{P}_n\hat{f}$	501
9.5.2 Solution of an integral equation of the first kind	504
Implementation of the Galerkin method	509
Other boundary integral equations and general comments	511
Discussion of the literature	512
Appendix: Results from functional analysis	516
Bibliography	519
Index	547
