

Light Scattering Reviews 5

Single Light Scattering and Radiative Transfer

Bearbeitet von
Alexander Kokhanovsky

1st Edition. 2010. Buch. xxvii, 549 S. Hardcover

ISBN 978 3 642 10335 3

Format (B x L): 17 x 24 cm

Gewicht: 1249 g

Weitere Fachgebiete > Geologie, Geographie, Klima, Umwelt > Geographie
Allgemein, Naturgeographie > Geographie: Allgemeines, Karten & Atlanten

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beack-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

List of contributors	XIII
Notes on the contributors	XVII
Preface	XXIII

Part I Optical Properties of Small Particles and their Aggregates

1 Numerical simulations of light scattering and absorption characteristics of aggregates

<i>Y. Okada</i>	3
1.1 Introduction	3
1.2 Properties of aggregates used in numerical simulations	4
1.2.1 Physical and light scattering properties	4
1.2.2 Shapes of aggregates	6
1.2.3 Aggregate orientation	7
1.3 Methods for numerical light scattering simulations	8
1.3.1 The DDA and FDTD	10
1.3.2 The CTM and GMM	11
1.3.3 The EMT	12
1.3.4 Future extensions of the numerical methods	12
1.4 Improved numerical simulations	13
1.4.1 Grouping and adding method (GAM)	13
1.4.2 Numerical orientation averaging using a quasi-Monte-Carlo method (QMC)	16
1.4.3 Extended calculation of light scattering properties with numerical orientation averaging	19
1.4.4 Scattering and absorption of BCCA composed of tens to thousands of monomers	22
1.4.5 Intensity and polarization of light scattered by silicate aggregates	24
1.5 Summary	27
References	31

2 Application of scattering theories to the characterization of precipitation processes

<i>Sandra Jacquier and Frédéric Gruy</i>	37
2.1 Introduction	37
2.2 Aggregate formation	38
2.2.1 Precipitation and particle synthesis	38
2.2.2 Particle shapes during precipitation	39
2.2.3 Dynamics of precipitation: modelling	41
2.2.4 Particle sizing during precipitation	42
2.3 Approximations for non-spherical particles	44
2.3.1 Rayleigh approximation	44
2.3.2 Rayleigh–Gans–Debye approximation	44
2.3.3 Anomalous Diffraction approximation	46
2.4 Approximations for aggregate scattering cross-section	47
2.4.1 Exact theory for non-spherical particles and aggregates	47
2.4.2 Main features of the scattering properties of aggregates	50
2.4.3 Approximate methods (CS, BPK, AD, ERI) for aggregates	55
2.4.4 Application: turbidity versus time during the agglomeration process	61
2.5 Approximation for radiation pressure cross-section	64
2.5.1 Introduction	64
2.5.2 Main features of radiation pressure cross-section	65
2.5.3 Approximate methods for aggregates	68
2.5.4 Conclusion	70
2.6 Scattering properties versus geometrical parameters of aggregates	70
2.7 Conclusion	74
References	75

Part II Modern Methods in Radiative Transfer

3 Using a 3-D radiative transfer Monte–Carlo model to assess radiative effects on polarized reflectances above cloud scenes

<i>C. Cornet, L. C-Labonnote, and F. Szczap</i>	81
3.1 Introduction	81
3.2 Including the polarization in a 3-D Monte–Carlo atmospheric radiative transfer model	82
3.2.1 Description of radiation and single scattering: Stokes vector and phase matrix	82
3.2.2 Description of the radiative transfer model, 3DMCpol	87
3.3 Total and polarized reflectances in the case of homogeneous clouds (1-D)	91
3.3.1 Validation of the MC polarized model	91
3.3.2 Reflectances of homogeneous clouds as a function of the optical thickness	94
3.4 Total and polarized reflectances in the case of 3-D cloud fields	94
3.4.1 Description of the 3-D cloud fields used	94
3.4.2 Comparisons with SHDOM and time considerations	96

3.4.3	High spatial resolution (80 m): illumination and shadowing effects	98
3.4.4	Medium spatial resolution (10 km): sub-pixel heterogeneity effects	99
3.5	Conclusions and perspectives	101
	References	102

4 Linearization of radiative transfer in spherical geometry: an application of the forward-adjoint perturbation theory

	<i>Holger H. Walter and Jochen Landgraf</i>	105
4.1	Introduction	105
4.2	Forward-adjoint perturbation theory in spherical geometry	108
4.2.1	The forward radiative transfer equation	108
4.2.2	The adjoint formulation of radiative transfer	111
4.2.3	Perturbation theory in spherical coordinates	114
4.3	Symmetry properties	115
4.4	Linearization of a radiative transfer model for a spherical shell atmosphere by the forward-adjoint perturbation theory	117
4.4.1	Solution of the radiative transfer equation by a Picard iteration method	118
4.4.2	Solution of the pseudo-forward transfer equation	126
4.4.3	Verification of the adjoint radiation field	128
4.5	Linearization of the spherical radiative transfer model	132
4.6	Conclusions	139
	Appendix A: Transformation of a volume source into a surface source	140
	References	142

5 Convergence acceleration of radiative transfer equation solution at strongly anisotropic scattering

	<i>Vladimir P. Budak, Dmitriy A. Klyuykov, and Sergey V. Korkin</i>	147
5.1	Introduction	147
5.2	Singularities of the solution of the radiative transfer equation	148
5.3	Small angle modification of the spherical harmonics method	152
5.4	Small angle approximation in transport theory	156
5.5	Determination of the solution of the regular part in a plane unidirectional source problem	160
5.6	Reflection and transmittance on the boundary of two slabs	167
5.7	Generalization for the vectorial case of polarized radiation	175
5.8	Evaluation of the vectorial regular part	181
5.9	MSH in arbitrary medium geometry	188
5.10	Regular part computation in arbitrary medium geometry	195
5.11	Conclusion	199
	References	201

6 Code SHARM: fast and accurate radiative transfer over spatially variable anisotropic surfaces

	<i>Alexei Lyapustin, Tolegen Muldashev and Yujie Wang</i>	205
6.1	The method of spherical harmonics: homogeneous surface	206

6.1.1	Solution for path radiance	209
6.1.2	Correction function of MSH	211
6.2	Code SHARM	212
6.2.1	Accuracy, convergence and speed of SHARM	214
6.3	Green's function method and its applications	216
6.3.1	Formal solution with the Green's function method	216
6.3.2	Practical considerations	219
6.3.3	Expression for TOA reflectance using LSRT BRF model	221
6.4	Green's function solution for anisotropic inhomogeneous surface	224
6.4.1	Operator solution of the 3-D radiative transfer problem	224
6.4.2	Linearized solution	227
6.4.3	Lambertian approximation	229
6.4.4	Numerical aspects	230
6.5	MSH solution for the optical transfer function	232
6.6	Similarity transformations	234
6.6.1	Singular value decomposition	236
6.6.2	Solution for moments	237
6.6.3	Solution for the OTF	237
6.7	Code SHARM-3D	240
6.7.1	Parameterized SHARM-3D solution	240
6.8	Discussion	242
	References	244

7 General invariance relations reduction method and its applications to solutions of radiative transfer problems for turbid media of various configurations

	<i>Nikolai N. Rogovtsov</i>	249
7.1	Introduction	249
7.2	Main statements of the general invariance relations reduction method . .	252
7.2.1	Statement of boundary-value problems of the scalar radiative transfer theory	252
7.2.2	Statement of the general invariance principle as applied to radiative transfer theory	260
7.2.3	General invariance relations and their physical interpretation . .	270
7.2.4	Scheme of using the general invariance principle and the general invariance relations	277
7.3	Some general examples of using the general invariance relations reduction method	279
7.3.1	Doubling formulae	279
7.3.2	On the relationship between the volume Green functions and the generalized reflection function	280
7.3.3	Analog of the Kirchhoff law for the case of non-equilibrium radiation in turbid media	282
7.3.4	General invariance relations for monochromatic radiation fluxes	284
7.3.5	Inequalities for monochromatic radiation fluxes and mean emission durations of turbid bodies	288

7.4	Strict, asymptotic and approximate analytical solutions to boundary-value problems of the radiative transfer theory for turbid media of various configurations	294
7.4.1	Application of the general invariance relations reduction method to the derivation of azimuth-averaged reflection function for a macroscopically homogeneous plane-parallel semi-infinite turbid medium	294
7.4.2	Asymptotic and approximate analytical expressions for monochromatic radiation fluxes exiting macroscopically homogeneous non-concave turbid bodies	301
7.4.3	On the depth regimes of radiation fields and on the derivation of asymptotic expressions for mean emission durations of optically thick, turbid bodies	309
7.5	Conclusion	313
	Appendix A	314
	References	318

Part III Optical Properties of Bright Surfaces and Regoliths

8 Theoretical and observational techniques for estimating light scattering in first-year Arctic sea ice

	<i>Bonnie Light</i>	331
8.1	Introduction	331
8.2	Background	331
8.3	Approach	332
8.4	Sea ice microstructure	334
8.4.1	Overview	334
8.4.2	Laboratory observations	337
8.4.3	Microstructure at -15°C	339
8.4.4	Temperature-dependent changes	347
8.4.5	Summary of microstructure observations	354
8.5	Apparent optical property observations	356
8.6	Radiative transfer in a cylindrical domain with refractive boundaries ..	360
8.6.1	Model overview	361
8.6.2	Implementation	364
8.6.3	Similarity	368
8.6.4	Simulation of laboratory observations	368
8.7	Structural-optical model	370
8.7.1	Structural-optical relationships	370
8.7.2	Phase functions	374
8.7.3	Model development and testing	376
8.7.4	Discussion	381
8.8	Conclusions	387
	References	388

9 Reflectance of various snow types: measurements, modeling, and potential for snow melt monitoring

Jouni I. Peltoniemi, Juha Suomalainen, Teemu Hakala, Jyri Näränen, Eetu Puttonen, Sanna Kaasalainen, Manuela Hirschmugl and Johanna Torppa . . .

	393
9.1 Introduction	393
9.2 Snow	395
9.3 BRF, definitions	396
9.4 Instrumentation	398
9.4.1 Model 2, 1996: a simple one-angle manual field goniometer	399
9.4.2 Goniometer model 3, 1999–2005	399
9.4.3 FIGIFIGO, 2005–	401
9.4.4 Light sources	403
9.4.5 Data processing	404
9.5 Main research efforts	406
9.6 Modeling	411
9.7 Results	413
9.7.1 Forward scattering signatures	422
9.7.2 Specular scattering effects	433
9.7.3 Spectral effects	433
9.7.4 Polarization signals	434
9.7.5 Albedos	434
9.8 Discussion	439
9.8.1 Melting signatures – a summary	439
9.8.2 Development of BRF measurement techniques	440
9.8.3 Supporting snow measurements	441
9.8.4 Modeling	442
9.9 Conclusions	442
References	443

10 Simulation and modeling of light scattering in paper and print applications

<i>Per Edström</i>	451
10.1 Introduction	451
10.2 Current industrial use of light scattering models	451
10.2.1 Standardized use of Kubelka–Munk	451
10.2.2 Deficiencies of Kubelka–Munk	454
10.2.3 Suggested extensions to Kubelka–Munk	459
10.2.4 New and higher demands drive the need for new models	461
10.3 Benefits of newer models	462
10.3.1 Radiative transfer modeling	462
10.3.2 Monte Carlo modeling	467
10.3.3 Impact on measurement systems and industry standards	471
10.4 Discussion	471
10.5 Conclusions	473
References	473

11 Coherent backscattering in planetary regoliths*Karri Muinonen, Jani Tyynelä, Evgenij Zubko, and Gordon Videen*..... 477

11.1 Introduction..... 477

11.2 Single-particle light scattering 480

11.2.1 Scattering matrix, cross-section, and asymmetry parameters ... 480

11.2.2 Scattering by Gaussian-random-sphere and agglomerated-debris particles 481

11.2.3 Internal vs. scattered fields 482

11.2.4 Interference in single scattering 487

11.2.5 Parameterizing single scattering 490

11.3 Coherent backscattering 494

11.3.1 Coherent-backscattering mechanism 495

11.3.2 Theoretical framework for multiple scattering..... 497

11.3.3 Scalar approximation 499

11.3.4 Vector approach 504

11.4 Physical modeling..... 509

11.4.1 Polarization fits..... 509

11.4.2 Coherent-backscattering simulations 512

11.5 Conclusion 512
