

Lectures on Flavor Physics

Bearbeitet von
U.-G. Meißner, Willibald Plessas

1. Auflage 2004. Buch. XI, 215 S. Hardcover

ISBN 978 3 540 22255 2

Format (B x L): 15,5 x 23,5 cm

Gewicht: 1110 g

[Weitere Fachgebiete > Physik, Astronomie > Quantenphysik](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Light-Quark Dynamics

<i>Jürg Gasser</i>	1
1 Introduction	1
2 QCD with Two Flavours	3
2.1 Symmetry of the Lagrangian	3
2.2 Symmetry of the Ground State	4
2.3 A Remark on Isospin Symmetry	5
3 Goldstone Bosons	6
3.1 The Goldstone Theorem	6
3.2 The Free Scalar Field	7
3.3 The Linear Sigma Model	7
3.4 QCD with Two Flavors	11
4 Effective Field Theories	12
4.1 Linear Sigma Model at Low Energy	13
4.2 QCD at Low Energy	15
5 Calculations with $\mathcal{L}_{\text{eff}}$	16
5.1 Leading Terms	17
5.2 Higher Order Trees	18
5.3 Loops	19
5.4 Renormalization Made Systematic	21
6 Pion-Pion Scattering	22
6.1 Chiral Expansion of the $\pi\pi$ Amplitude	23
6.2 Type A,B LECs	26
7 Roy Equations and Threshold Parameters	26
7.1 $\pi\pi \rightarrow \pi\pi$: Roy I	26
7.2 $\pi\pi \rightarrow \pi\pi$: Roy II	28
7.3 The Coupling $\bar{l}_3$	29
7.4 Note Added: On the Precision of the Theoretical Predictions for $\pi\pi$ Scattering	30
8 Outlook	31

The Anomalous Magnetic Moment of the Muon: A Theoretical Introduction

<i>Marc Knecht</i>	37
1 Introduction	37

VIII Contents

2	General Considerations.....	39
3	Brief Overview of the Experimental Situation	45
3.1	Measurements of the Magnetic Moment of the Electron	45
3.2	Measurements of the Magnetic Moment of the Muon	45
3.3	Experimental Bounds on the Anomalous Magnetic Moment of the τ Lepton	48
4	The Anomalous Magnetic Moment of the Electron	48
4.1	The Lowest Order Contribution	49
4.2	Higher Order Mass Independent Corrections	50
4.3	Mass Dependent QED Corrections	53
4.4	Other Contributions to a_e	56
4.5	Comparison with Experiment and Determination of α	56
5	The Anomalous Magnetic Moment of the Muon	58
5.1	QED Contributions to a_μ	59
5.2	Hadronic Contributions to a_μ	61
5.3	Electroweak Contributions to a_μ	73
5.4	Comparison with Experiment	77
6	Concluding Remarks	78

CP Violation in B and K Decays: 2003

	<i>Andrzej J. Buras</i>	85
1	Introduction	85
1.1	Preface	85
1.2	CKM Matrix and the Unitarity Triangle	86
1.3	The Special Role of $ V_{us} $, $ V_{ub} $ and $ V_{cb} $	88
1.4	Grand Picture	90
1.5	Theoretical Framework	90
2	Particle-Antiparticle Mixing and Various Types of CP Violation	93
2.1	Preliminaries	93
2.2	Express Review of $K^0 - \bar{K}^0$ Mixing	94
2.3	The First Look at ε and ε'	96
2.4	Basic Formula for ε	98
2.5	Express Review of $B_{d,s}^0 - \bar{B}_{d,s}^0$ Mixing	99
2.6	Basic Formulae for $\Delta M_{d,s}$	101
2.7	Classification of CP Violation	101
3	Standard Analysis of the Unitarity Triangle (UT)	106
3.1	General Procedure	106
3.2	The Angle β from $B_d \rightarrow \psi K_S$	107
3.3	Unitarity Triangle 2003	108
4	ε'/ε in the Standard Model	110
4.1	Preliminaries	110
4.2	Basic Formulae	110
4.3	Numerical Results	111
4.4	Conclusions	112

5	The Angles α , β and γ from B Decays	114
5.1	Preliminaries	114
5.2	Classification of Elementary Processes	114
5.3	Neutral B Decays into CP Eigenstates	115
5.4	Decays to CP Non-eigenstates	118
5.5	U-Spin Strategies	121
5.6	Constraints for γ from $B \rightarrow \pi K$	121
6	$K^+ \rightarrow \pi^+ \nu \bar{\nu}$ and $K_L \rightarrow \pi^0 \nu \bar{\nu}$	124
6.1	Branching Ratios	124
6.2	Unitarity Triangle and $\sin 2\beta$ from $K \rightarrow \pi \nu \bar{\nu}$	126
6.3	Concluding Remarks	126
7	Minimal Flavour Violation Models	127
7.1	Preliminaries	127
7.2	Universal Unitarity Triangle	128
7.3	Models with Universal Extra Dimensions	128
8	Outlook	128
8.1	Phase 1 (2003-2007)	128
8.2	Phase 2 (2007-2009)	129
8.3	Phase 3 (2009-2013)	130

Heavy-Quark Physics

	<i>Matthias Neubert</i>	137
1	Introduction	137
2	Statement of the Factorization Formula	140
2.1	The Idea of Factorization	140
2.2	The Factorization Formula	141
3	Arguments in Favor of Factorization	142
3.1	Preliminaries and Power Counting	142
3.2	Non-leptonic Decay Amplitudes	145
3.3	Remarks on Final-State Interactions	147
4	Power-Suppressed Contributions	149
4.1	Interactions with the Spectator Quark	149
4.2	Annihilation Topologies	150
4.3	Non-leading Fock States	151
5	Limitations of the Factorization Approach	153
5.1	Several Small Parameters	153
5.2	Power Corrections Enhanced by Small Quark Masses	154
6	QCD Factorization for Charmless Decays	155
7	Testing Factorization in $B \rightarrow \pi K, \pi\pi$ Decays	157
8	Establishing CP Violation in the Bottom Sector	158
9	Mixing-Independent Construction of the Unitarity Triangle	162
10	Outlook	165

Neutrino Physics – Theory

	<i>Walter Grimus</i>	169
1	Motivation	169
2	Neutrino Oscillations	170
2.1	Neutrino Oscillations in Vacuum	170
2.2	Matter Effects	176
2.3	Adiabatic Neutrino Evolution in Matter	181
2.4	3-Neutrino Oscillations and the Mixing Matrix	187
3	Dirac Versus Majorana Neutrinos	190
3.1	Free Fields	191
3.2	Majorana Neutrinos and CP	192
3.3	Neutrinoless $\beta\beta$ -Decay	193
3.4	Absolute Neutrino Masses	196
3.5	Neutrino Electromagnetic Moments	199
4	Models for Neutrino Masses and Mixing	201
4.1	Introduction and Scope	201
4.2	The Standard Model with Additional Scalar Multiplets	203
4.3	The Seesaw Mechanism	205
4.4	Combining the Seesaw Mechanism with Radiative Mass Generation	206
4.5	A Model for Maximal Atmospheric Neutrino Mixing	207
5	Conclusions	208
