

Percolation Theory for Flow in Porous Media

von
Allen Hunt, Robert Ewing

2nd ed.

[Percolation Theory for Flow in Porous Media – Hunt / Ewing](#)

schnell und portofrei erhältlich bei beck-shop.de DIE FACHBUCHHANDLUNG

Thematische Gliederung:

[Geophysik](#)

Springer-Verlag Berlin Heidelberg 2009

ISBN 978 3 540 89789 7

Contents

1	Percolation Theory: Topology and Structure	1
1.1	What is Percolation?	1
1.2	Some Examples	2
1.3	Qualitative Descriptions	4
1.4	What are the Basic Variables?	6
1.5	What Is Scale Invariance and Why Is It So Important?	7
1.6	The Correlation Length in One Dimension	10
1.7	The Relationship of Scale Invariance and Renormalization, and the Relationship of the Renormalization Group to Percolation Theory	11
1.8	Cluster Statistics of Percolation Theory	12
1.9	Derivation of 1D Cluster Statistics and Discussion of Fractal Dimensionality	15
1.10	Argument for Dimensionally Dependent Scaling Law	16
1.11	Explicit Calculations of the Second Moment of Cluster Statistics in One Dimension	19
1.12	Calculation of the Correlation Length on a Bethe Lattice	20
1.13	Explicit Calculations of the Second Moment of Cluster Statistics on a Bethe Lattice	22
1.14	Mean-Field Treatment of the Probability of Being Connected to the Infinite Cluster	23
1.15	Cluster Statistics on a Bethe Lattice	24
1.16	Summary of Relationships Between Exponents	25
1.17	Calculation of the Critical Site Percolation Probability	26
1.18	Value of p_c for Bond Percolation on the Square Lattice	29
1.19	Estimations of p_c for Bond Percolation on the Triangular and Honeycomb Lattices	30
1.20	Summary of Values of p_c	31
1.21	More General Relationships for p_c	32
	Problems	34
	References	34

2	Properties Relevant for Transport and Transport Applications	37
2.1	Exponents Describing Backbone Structure	37
2.2	Exponents for Conduction Properties	39
2.3	Summary of Derived Values of Critical Exponents	43
2.4	Finite-Size Scaling and Fractal Characteristics	43
2.5	Critical Path Analysis	44
2.5.1	Relation of CPA to Extreme Value Statistics in 1D Systems	45
2.5.2	CPA in Two Dimensions	47
2.5.3	CPA in 3D	49
2.5.4	Dimensional Dependence and Similarity to Matheron Conjecture	50
2.5.5	Optimization of the Percolation Network: Contrast Between 2D and 3D	51
	Problems	54
	References	54
3	Porous Media Primer for Physicists	57
3.1	Introduction and Background	57
3.2	Relevant Soil Physics	59
3.2.1	Porosity and Moisture Content	59
3.2.2	Classification of the Pore Space	61
3.2.3	Particle Sizes and Pore Sizes	64
3.2.4	Parallel Tube, Network, and Fractal Models	67
3.2.5	Representative Elementary Volume and the Concept of “Upscaling”	68
3.2.6	Porosity and Fractal Media	69
3.3	Soil Water Potential and Water Retention	74
3.4	Hysteresis and Time Dependence in Pressure–Saturation Relationships	80
3.5	Hydraulic and Transport Properties	82
3.6	Some Notes on Experimental Procedures	88
3.7	One Example from Living Organisms	89
	Problems	91
	References	91
4	Specific Examples of Critical Path Analysis	97
4.1	r -Percolation	98
4.2	$r - E$ -Percolation (Variable-Range Hopping)	105
4.3	Saturated Hydraulic Conductivity	109
4.4	Unsaturated Hydraulic Conductivity	113
4.5	Hydraulic Conductivity for Geologic Media: Parallel vs. Series	115
4.6	Summary	119
	Problems	119
	References	121

5	Hydraulic and Electrical Conductivity: Conductivity Exponents and Critical Path Analysis	123
5.1	Hydraulic and Electrical Conductivities, and Electrokinetic Coupling: Universal and Nonuniversal Exponents	125
5.1.1	Balberg Nonuniversality	128
5.1.2	Transition from Critical Path Analysis to Percolation Scaling	130
5.1.3	Return to Balberg Nonuniversality	133
5.1.4	Inferences on Porosity Dependences at Full Saturation: Archie's Law	134
5.1.5	Universal Exponents Masquerading as Nonuniversal	136
5.1.6	Regions of Applicability	139
5.2	Electrical Conductivity as a Function of Saturation: Trends and Potential Complications in Experimental Data	142
5.2.1	Comparison with Experiment	145
5.3	Effects of Arbitrary Pore-Size Distributions	154
5.4	Water Film Issues	157
5.5	Electrical Conductivity for $\theta < \theta_t$	162
	Problems	163
	References	163
6	Other Transport Properties of Porous Media	169
6.1	Air Permeability	169
6.2	Thermal Conductivity	173
6.2.1	General Comments on the Saturation Dependence of the Thermal Conductivity	173
6.2.2	Theoretical Construction	174
6.3	Solute and Gas Diffusion	180
6.4	Electrical Conductivity of Hydrated Clay Minerals	188
6.4.1	r-Percolation and E-Percolation	191
6.4.2	Percolation Calculation of E_a	194
6.5	Geophysical Applications	200
6.6	Summary	201
	References	203
7	Pressure–Saturation Curves and the Critical Volume Fraction for Percolation: Accessibility Function of Percolation Theory	207
7.1	Structural Hysteresis	208
7.2	Hydraulic Conductivity-Limited Equilibration, and Dry-End Deviations from Fractal Scaling	212
7.3	Analysis of Water-Retention Curves in Terms of the Critical Moisture Content for Percolation	219
7.4	Wet-End Deviations from Fractal Scaling of Water-Retention Curves, and Discussion of the Critical Volume Fraction for Percolation	222
7.5	General Formulation for Equilibrium and Analogy to Ideal Glass Transition	227

7.6	Oil Residuals	229
	Problems	229
	References	230
8	Applications of the Correlation Length: Scale Effects on Flow	233
8.1	Isolation of Geologic and Percolation Effects on a Correlation Length	234
8.2	Effects of Dimensional Crossovers on Conductivity	234
8.3	Comparison with Field Data	240
8.4	Effects of Hydrophobicity on Water Uptake of Porous Media	242
	Problems	243
	References	244
9	Applications of the Cluster Statistics	247
9.1	Spatial Statistics and Variability of K from Cluster Statistics of Percolation Theory	247
9.2	Cluster Statistics Treatment of Nonequidimensional Volumes and Anisotropy	254
9.3	Semivariograms and Cross-Covariance	261
	Problems	263
	References	264
10	Properties Based on Tortuosity	265
10.1	Longitudinal Dispersion of Solutes in Porous Media	265
10.1.1	Quantifying Limitations of the Neglect of Diffusion	266
10.1.2	Conventional Modeling	266
10.1.3	Experimental Overview	267
10.1.4	Theoretical Descriptions	268
10.1.5	General Comments Regarding Experiments	269
10.1.6	Spatial Distribution at an Instant in Time	275
10.1.7	Hydraulic Conductivity	277
10.2	Comparison with Simulations	277
10.3	Comparison with Experiment	278
10.4	Discussion	281
	References	282
11	Effects of Multiscale Heterogeneity	287
11.1	Soil Structure	287
11.2	Variable Moisture Content	293
11.3	A Schematic Hierarchical Problem	295
11.4	A More Realistic Hierarchical Problem	299
	Problems	304
	References	304
	Summary	307
	Index	309
