

Conformal Invariance and Critical Phenomena

Bearbeitet von
Malte Henkel

1. Auflage 1999. Buch. xvii, 418 S. Hardcover

ISBN 978 3 540 65321 9

Format (B x L): 15,5 x 23,5 cm

Gewicht: 1750 g

Weitere Fachgebiete > Physik, Astronomie > Angewandte Physik > Statistische
Physik, Dynamische Systeme

schnell und portofrei erhältlich bei

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beack-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1. Critical Phenomena: a Reminder	1
1.1 Phase Diagrams and Critical Exponents	1
1.2 Scale Invariance and Scaling Relations	6
1.3 Some Simple Spin Systems	12
1.3.1 Ising Model	13
1.3.2 Tricritical Ising Model	14
1.3.3 q -States Potts Model	16
1.3.4 Vector Potts Model	19
1.3.5 XY Model	21
1.3.6 Yang–Lee Edge Singularity	23
1.3.7 Percolation	24
1.3.8 Linear Polymers	26
1.3.9 Restricted Solid-On-Solid Models	27
1.4 Some Experimental Examples	30
1.5 Correspondence Between Statistical Systems and Field Theory	37
1.6 Correspondence of Physical Quantities	39
1.6.1 Free Energy Density	40
1.6.2 Correlation Functions	40
1.6.3 Correlation Lengths	41
2. Conformal Invariance	43
2.1 From Scale Invariance to Conformal Invariance	43
2.2 Conformal Transformations in d Dimensions	44
2.3 Conformal Transformations in Two Dimensions	46
2.4 Conformal Invariance in Two Dimensions	49
2.5 Correlation Functions of Quasi-primary Operators	51
2.6 The Energy–Momentum Tensor	53
3. Finite-Size Scaling	63
3.1 Statistical Systems in Finite Geometries	63
3.2 Finite-Size Scaling Hypothesis	64
3.3 Universality	68
3.4 Phenomenological Renormalization	72
3.5 Consequences of Conformal Invariance	74

3.6	Comparison with Experiments	78
4.	Representation Theory of the Virasoro Algebra	83
4.1	Verma Module	84
4.2	Hilbert Space Structure	88
4.3	Null Vectors	90
4.4	Kac Formula and Unitarity	92
4.5	Minimal Characters	97
5.	Correlators, Null Vectors and Operator Algebra	101
5.1	Null Vectors and Correlation Functions	101
5.2	Operator Algebra and Associativity	104
5.3	Analyticity and the Monodromy Problem	110
5.4	Riemann's Method	112
6.	Ising Model Correlators	117
6.1	Spin-Density Four-Point Function	117
6.2	Energy-Density Four-Point Function	121
6.3	Mixed Four-Point Functions	123
6.4	Semi-Local Four-Point Functions	124
7.	Coulomb Gas Realization	127
7.1	The Free Bosonic Scalar Field	127
7.2	Screened Coulomb Gas	132
7.3	Minimal Correlation Functions	134
7.4	Minimal Algebras and OPE Coefficients	137
8.	The Hamiltonian Limit and Universality	141
8.1	Hamiltonian Limit in the Ising Model	141
8.2	Hubbard–Stratonovich Transformation	144
8.3	Hamiltonian Limit of the Scalar ϕ^4 Theory	146
8.4	Hamiltonian Spectrum and Conformal Invariance	148
8.5	Temperley–Lieb Algebra	150
8.6	Laudau–Ginzburg Classification	154
9.	Numerical Techniques	157
9.1	Simple Properties of Quantum Hamiltonians	157
9.2	Some Further Physical Quantities and their Critical Exponents	160
9.3	Translation Invariance	162
9.4	Diagonalization	163
9.5	Extrapolation	170
9.5.1	VBS Algorithm	174
9.5.2	BST Algorithm	174
9.6	The DMRG Algorithm	177

10. Conformal Invariance in the Ising Quantum Chain	183
10.1 Exact Diagonalization	183
10.1.1 General Remarks	183
10.1.2 Jordan–Wigner Transformation	184
10.1.3 Diagonalization of a Quadratic Form	185
10.1.4 Eigenvalue Spectrum and Normalization	187
10.2 Character Functions	189
10.3 Finite-Size Scaling Analysis	191
10.3.1 Ground State Energy	191
10.3.2 Operator Content	194
10.3.3 Finite-Size Corrections	197
10.3.4 Finite-Size Scaling Functions	197
10.4 The Spin-1 Quantum Chain	198
10.5 The Virasoro Generators	201
10.6 Recapitulation	203
11. Modular Invariance	205
11.1 The Modular Group	205
11.2 Implementation for Minimal Models	206
11.3 Modular Invariance at $c = 1$	211
11.3.1 Circle or Coulomb Models	212
11.3.2 Orbifold Models	213
11.4 Lattice Realizations	216
12. Further Developments and Applications	219
12.1 Three-States Potts Model	219
12.2 Tricritical Ising Model	221
12.2.1 Operator Content	221
12.2.2 Supersymmetry and Superconformal Invariance	224
12.3 Yang–Lee Edge Singularity	227
12.4 Ashkin–Teller Model	230
12.4.1 Relation with the XXZ Quantum Chain	231
12.4.2 Global Symmetry and Boundary Conditions	231
12.4.3 Phase Diagram	233
12.4.4 Operator Content on the $c = 1$ Line	234
12.5 XY Model	236
12.6 XXZ Quantum Chain	238
12.7 Ising Correlation Functions on Cylinders	242
12.8 Alternative Realizations of the Conformal Algebra	242
12.8.1 Logarithmic Conformal Theories	243
12.8.2 Lattice Two-Point Functions	244
12.9 Percolation	245
12.10 Polymers	247
12.10.1 Linear Polymers	247
12.10.2 Lattice Animals	251

12.11 A Sketch of Conformal Turbulence	254
12.12 Some Remarks on 3D Systems	258
13. Conformal Perturbation Theory	261
13.1 Correlation Functions in the Strip Geometry	261
13.2 General Remarks on Corrections to the Critical Behaviour ..	263
13.3 Finite-Size Corrections	265
13.3.1 Tower of the Identity	266
13.3.2 Application to the Ising Model	267
13.3.3 Application to the Three-States Potts Model	268
13.3.4 Checking the Operator Content from Finite-Size Corrections	270
13.4 Finite-Size Scaling Functions	270
13.4.1 Ising Model: Thermal Perturbation	271
13.4.2 Ising Model: Magnetic Perturbation	273
13.5 Truncation Method	275
14. The Vicinity of the Critical Point	279
14.1 The c -Theorem	280
14.1.1 Application to Polymers	284
14.2 Conserved Currents Close to Criticality	285
14.3 Exact S -Matrix Approach	289
14.4 Phenomenological Consequences	298
14.4.1 Integrable Perturbations	298
14.4.2 Universal Critical Amplitude Ratios	304
14.4.3 Chiral Potts Model	306
14.4.4 Oriented Interacting Polymers	307
14.4.5 Non-integrable Perturbations	311
14.5 Asymptotic Finite-Size Scaling Functions	316
15. Surface Critical Phenomena	321
15.1 Systems with a Boundary	321
15.2 Conformal Invariance Close to a Free Surface	326
15.3 Finite-Size Scaling with Free Boundary Conditions	330
15.4 Surface Operator Content	332
15.4.1 Ising Model	332
15.4.2 Three-States Potts Model	337
15.4.3 Temperley–Lieb Algebra and Relation with the XXZ Chain	338
15.4.4 Tricritical Ising Model	340
15.4.5 Yang–Lee Edge Singularity	340
15.4.6 Ashkin–Teller Model	340
15.4.7 XXZ Quantum Chain	342
15.4.8 Percolation	343
15.4.9 Polymers	346

15.5	Profiles	346
15.6	Defect Lines	350
15.6.1	Aperiodically Modulated Systems	362
15.6.2	Persistent Currents in Small Rings	363
16.	Strongly Anisotropic Scaling	369
16.1	Dynamical Scaling	369
16.2	Schrödinger Invariance	372
16.3	Towards Local Scale Invariance for General θ	377
16.4	Some Remarks on Reaction–Diffusion Processes	383
