Preface	xiii
Acknowledgements	xv
1 Introduction	1
2 The Integrated Concept of Tracers in Hydrology	5
2.1 System approach	5
2.2 Definition of tracers	7
2.3 Modelling in the context of integrated tracerhydrology	9
2.4 Fields of application	12
3 Environmental Tracers	13
3.1 Introduction	13
3.2 Stable isotopes of water	15
3.2.1 Notation	15
3.2.2 Fractionation	17
3.2.3 The global distribution in rainfall	22
3.2.3.1 Temperature effect	23
3.2.3.2 Seasonal effect	24
3.2.3.3 Altitude effect	25
3.2.3.4 Continental effect	27
3.2.3.5 Regionalization of isotopes in rainfall	29
3.2.3.6 Evaporation	30
3.3 Stable isotopes in soil	35
3.3.1 Attenuation	35
3.4 Stable isotopes in surface and groundwater	38
3.4.1 Temporal variability of stable isotopes in runoff	38
3.4.2 Temporal variability of stable isotopes in groundwater	39
3.5 The use of environmental isotopes for hydrological system analysis	40
3.6 Nitrogen isotopes and origin assignment	42
3.7 Age dating	43
3.7.1 Tritium	43
3.7.2 Dating with gases (CFC, SF ₆)	45

3.7.2.1 Dating with other noble gases	50
3.7.2.2 ^{14}C -Dating	50
4 Artificial Tracers	57
4.1 Fluorescent tracers	59
4.1.1 Basics of fluorescence	61
4.1.1.1 Spectra	63
4.1.2 Chemical and physical characteristics of dye tracers	65
4.1.2.1 Solubility	66
4.1.2.2 Fluorescence intensity – detection limit	67
4.1.2.3 Effects of dependencies	69
4.1.2.4 pH Dependence	70
4.1.2.5 Temperature dependence	72
4.1.2.6 Photolytic dependence	72
4.1.2.7 Sorption processes	76
4.1.2.8 Chemical and biological stability	84
4.1.2.9 Toxicity and related environmental effects	86
4.1.2.10 General assessment	86
4.1.3 Measurement techniques	88
4.1.3.1 Filter fluorometer	88
4.1.3.2 Spectral fluorometer	89
4.1.3.3 Synchronous scan technique	89
4.1.3.4 Background signals and light scattering	94
4.1.3.5 Fibre optic fluorometer (FOF)	96
4.1.3.6 Field fluorometer for in situ measurements	97
4.1.3.7 Laser measurement	99
4.1.3.8 Advanced measurement techniques	100
4.1.3.9 Long term sampling using active charcoal bags	100
4.2 Salt tracers	102
4.2.1 Chemical and physical characteristics of salts	102
4.2.1.1 Sodium chloride (NaCl)	105
4.2.1.2 Bromide (Br^-)	105
4.2.1.3 Lithium	106
4.2.1.4 Iodide	106
4.2.2 Measurement techniques	107
4.3 Drifting particles as tracers	107
4.3.1 General characteristics of drifting particles	108
4.3.1.1 Lycopodium spores	109
4.3.1.2 Bacteria and bacteriophages (or phages)	109
4.3.1.3 Fluorescent microspheres	111
4.3.2 Measurement techniques and sampling of particle tracers	111
4.3.2.1 Measurement	111
4.3.2.2 Sampling	112
4.4 Radioactive tracers	112
4.4.1 Basics of radioactivity	112
4.4.2 Characteristics of radioactive tracers	114
4.4.2.1 Single-well technique	115
4.5 Other tracers	115
4.5.1 Fluorobenzoic acids (FBA)	115
4.5.1.1 Suitability/potential applications	116
4.5.2 Deuterium ^2H as an artificial tracer	117

CONTENTS

ix

4.5.3	Dissolved gas tracers	118
4.5.3.1	Common gas tracers and tracer characteristics	119
4.5.3.2	Gas-specific methods – technical equipment	119
4.5.3.3	Applications	120
4.5.4	Nonfluorescent dyes	120
4.5.4.1	Brilliant blue	122
5	Mathematical Modelling of Experimental Data	123
5.1	Artificial tracer (ideal) under saturated flow conditions	123
5.1.1	Transport equations	123
5.1.1.1	3D equations	123
5.1.1.2	2D equations	126
5.1.1.3	1D equations	127
5.1.2	Solutions to the transport equations	127
5.1.2.1	2D solution	128
5.1.2.2	1D solution	130
5.1.3	Estimation of the transport parameters	133
5.1.3.1	Combined least squares method (LSQM)	133
5.1.3.2	Method of moments (MM)	136
5.1.3.3	The cumulative curve method (CCM)	137
5.1.4	Artificial tracer experiments in multi-flow systems	140
5.1.5	Experiments in double-porosity aquifers	144
5.1.6	Examples	148
5.1.6.1	Column experiment	148
5.1.6.2	Combined pumping-tracer test	149
5.1.6.3	Experiment in multi-flow system	151
5.1.6.4	Experiment in double-porosity (fissured) medium	153
5.2	Tracer experiments under unsaturated flow conditions	154
5.3	Tracer experiments in streams and rivers	158
5.4	Environmental tracer data	160
5.4.1	Introduction	160
5.4.2	The basic concept of lumped-parameter models	161
5.4.2.1	Combined piston-flow diffusion model (SPFM)	165
5.4.3	Selection of the model	166
5.4.4	Examples	168
5.4.4.1	Application of stable isotopes to bank filtration	168
5.4.4.2	Application of tritium measurements in catchment areas	170
5.4.5	Multi-cell approach and concluding remarks	172
5.5	The goodness-of-fit of a model	174
6	Technical Instructions	175
6.1	Planning and execution of a tracer study	175
6.1.1	Data collection and evaluation, field reconnaissance and mapping	176
6.1.2	Choice of tracers and estimation of tracer mass	177
6.1.3	Planning of studies and experiment execution in detail – creation of a schedule	178
6.1.4	Risk management	179
6.1.5	Consultation with authorities and formal application (legal process)	179
6.1.6	Practical suggestions for experiment execution	180
6.1.7	Requirements for an adequate groundwater sampling	181

6.2	Estimation of tracer injection mass	182
6.3	Gauging discharge	187
6.3.1	Approach of dilution method	187
6.3.2	Slug injection (integration method, gulp injection)	188
6.3.3	Constant rate injection	190
6.3.4	Requirements for tracers	191
6.3.5	Salt dilution technique	193
6.3.6	Characteristic example of a tracer dilution gauging in a brook (slug injection)	194
6.4	Chloride method for groundwater recharge estimation	195
6.5	Hydrograph separation using the end member mixing analysis (EMMA)	198
7	Case Studies	201
7.1	Groundwater	202
7.1.1	Case study: 'Estimation of groundwater origin, residence times, and recharge of Chad Aquifers in Nigeria'	210
7.1.1.1	Introduction and aim	210
7.1.1.2	Description of test site	210
7.1.1.3	Hydrogeology	210
7.1.1.4	Methodology	212
7.1.1.5	Results	213
7.1.1.6	Interpretation	218
7.1.2	Case study: 'Vulnerability of a spring capture zone'	218
7.1.2.1	Introduction and aim	219
7.1.2.2	Description of test site	219
7.1.2.3	Methodology	219
7.1.2.4	Results	220
7.1.3	Case study: 'Evaluation of aquifer parameters by single well techniques'	221
7.1.3.1	Single well experiment using radioactive isotope ^{82}Br	223
7.1.3.2	Single well experiment with fluorescent tracers using fibre optic sensor	224
7.1.3.3	Single well experiment with fluorescent tracers using online fluorometer	226
7.2	Case studies in the unsaturated zone and in soils	229
7.2.1	Specific aspects of using tracers in the unsaturated zone	230
7.2.2	Case study: 'Environmental deuterium transport through soils'	232
7.2.2.1	Introduction and aim	232
7.2.2.2	Description of test site	233
7.2.2.3	Modelling	233
7.2.2.4	Results and conclusions	236
7.2.3	Case study: 'Determining the filtration capacity of soil-aquifer systems by multi tracer experiments'	239
7.2.3.1	Introduction	239
7.2.3.2	Laboratory experiments	240
7.2.3.3	Field experiments	242
7.2.3.4	Assessment of results and methodology	244
7.3	Surface water	246
7.3.1	Lakes	247
7.3.2	Rivers	248
7.3.3	Specific aspects of using tracers in surface waters	250

CONTENTS

xi

7.3.4 Case study: 'Calibration of transport models using tracer techniques – River Rhine'	252
7.3.4.1 Introduction	252
7.3.4.2 Methods	253
7.3.4.3 Model conception to be calibrated and validated	255
7.3.4.4 Method of resolution for river sections	256
7.3.4.5 Tracer experiments	258
7.3.4.6 Assessment of the experiments	272
7.3.5 Case study: 'On mixing of effluent inflow'	273
7.3.5.1 Introduction and aim	273
7.3.5.2 Methodology	274
7.3.5.3 Results	276
7.3.6 Case study: 'Estimation of hydrodynamics and transport parameters in Paiva Castro reservoir, Brazil'	277
7.3.6.1 Introduction and aims	277
7.3.6.2 Methodology	278
7.3.6.3 Measurements	278
7.3.6.4 Mathematical modelling	279
7.3.6.5 Results	279
7.3.6.6 Conclusions	281
7.3.7 Case study: 'Investigation of internal dynamics and residence time in Lake Bled'	282
7.3.7.1 Introduction	282
7.3.7.2 Tracer experiments	283
7.3.7.3 Interpretation of the experiments	290
7.3.7.4 Modelling	291
7.3.7.5 Second study 1988–1991 – determination of residence time	292
7.3.7.6 General assessment	299
7.3.8 Case study: 'Optimization of a sewage effluent into Lake Murten'	299
7.4 Glaciers	303
7.4.1 Specific techniques of tracer experiments in glaciers	308
7.4.2 Injection	308
7.4.3 Sampling	309
7.4.4 Analyses	310
7.4.5 Case study: 'Tracer experiments in temperate alpine glaciers – Findelen'	310
7.4.5.1 Summer experiments 1982	312
7.4.5.2 Winter experiments 1984	318
7.5 Catchment scale	321
7.5.1 Case study: 'Surface-groundwater interaction'	325
7.5.1.1 Introduction and aim	325
7.5.1.2 Methodology	326
7.5.1.3 Water level monitoring	326
7.5.1.4 Stable isotopes	327
7.5.1.5 Artificial tracer, SF ₆	329
7.5.1.6 Fluorescent dyes	330
7.5.1.7 Conclusions	330
7.5.2 Case study: 'Runoff generation processes investigated using tracers'	331
7.5.2.1 Introduction and aim	331
7.5.2.2 Description of test site	331
7.5.2.3 Methodology	332

7.5.2.4 Data	335
7.5.2.5 Results and discussion	336
7.5.2.6 Application of tracer results for model design and model validation	340
7.5.2.7 Multi tracer experiments at hillslopes	342
