

Physics of Space Storms

From the Solar Surface to the Earth

Bearbeitet von
Hannu Koskinen

1st Edition. 2011. Buch. xviii, 419 S. Hardcover

ISBN 978 3 642 00310 3

Format (B x L): 16,8 x 24 cm

Gewicht: 905 g

[Weitere Fachgebiete > Geologie, Geographie, Klima, Umwelt > Geologie > Meteorologie, Klimatologie](#)

Zu [Leseprobe](#)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text "beck-shop.de" in a bold, red, sans-serif font. Above the "i" in "shop" are three red dots of increasing size. Below the main text, the words "DIE FACHBUCHHANDLUNG" are written in a smaller, red, all-caps, sans-serif font.

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Preface	XI
Acknowledgements	XV
1. Stormy Tour from the Sun to the Earth	1
1.1 Source of Space Storms: the Sun	1
1.1.1 The Sun as a star	2
1.1.2 Solar spectrum	5
1.1.3 Solar atmosphere	7
1.1.4 Rotation of the Sun	8
1.1.5 Sunspots and solar magnetism	11
1.1.6 Coronal activity	16
1.2 The Carrier to the Earth: the Solar Wind	21
1.2.1 Elements of solar wind expansion	21
1.2.2 The interplanetary magnetic field	25
1.2.3 The observed structure of the solar wind	28
1.2.4 Perturbed solar wind	29
1.3 The Magnetosphere	32
1.3.1 Formation of the Earth's magnetosphere	32
1.3.2 The outer magnetosphere	34
1.3.3 The inner magnetosphere	37
1.3.4 Magnetospheric convection	40
1.3.5 Origins of magnetospheric plasma	44
1.3.6 Convection and electric fields	45
1.4 The Upper Atmosphere and the Ionosphere	48
1.4.1 The thermosphere and the exosphere	49
1.4.2 Structure of the ionosphere	50
1.4.3 Electric currents in the polar ionosphere	51
1.5 Space Storms Seen from the Ground	54
1.5.1 Measuring the strength of space storms	55
1.5.2 Geomagnetically induced currents	57

2. Physical Foundations	59
2.1 What is Plasma?	59
2.1.1 Debye shielding	60
2.1.2 Plasma oscillations	61
2.1.3 Gyro motion	62
2.1.4 Collisions	63
2.2 Basic Electrodynamics	64
2.2.1 Maxwell's equations	64
2.2.2 Lorentz force	66
2.2.3 Potentials	66
2.2.4 Energy conservation	70
2.2.5 Charged particles in electromagnetic fields	71
2.3 Tools of Statistical Physics	73
2.3.1 Plasma in thermal equilibrium	73
2.3.2 Derivation of Vlasov and Boltzmann equations	75
2.3.3 Macroscopic variables	78
2.3.4 Derivation of macroscopic equations	80
2.3.5 Equations of magnetohydrodynamics	82
2.3.6 Double adiabatic theory	86
3. Single Particle Motion	89
3.1 Magnetic Drifts	89
3.2 Adiabatic Invariants	93
3.2.1 The first adiabatic invariant	93
3.2.2 Magnetic mirror and magnetic bottle	95
3.2.3 The second adiabatic invariant	96
3.2.4 Betatron and Fermi acceleration	96
3.2.5 The third adiabatic invariant	97
3.3 Motion in the Dipole Field	98
3.4 Motion Near a Current Sheet	103
3.4.1 The Harris model	104
3.4.2 Neutral sheet with a constant electric field	106
3.4.3 Current sheet with a small perpendicular magnetic field component	107
3.5 Motion in a Time-dependent Electric Field	108
3.5.1 Slow time variations	108
3.5.2 Time variations in resonance with gyro motion	108
3.5.3 High-frequency fields	109
4. Waves in Cold Plasma Approximation	113
4.1 Basic Concepts	113
4.1.1 Waves in linear media	113
4.1.2 Wave polarization	117
4.1.3 Reflection and refraction	118
4.2 Radio Wave Propagation in the Ionosphere	121
4.2.1 Isotropic, lossless ionosphere	121

4.2.2	Weakly inhomogeneous ionosphere	124
4.2.3	Inclusion of collisions	128
4.2.4	Inclusion of the magnetic field	129
4.3	General Treatment of Cold Plasma Waves	130
4.3.1	Dispersion equation for cold plasma waves	130
4.3.2	Parallel propagation ($\theta = 0$)	133
4.3.3	Perpendicular propagation ($\theta = \pi/2$)	136
4.3.4	Propagation at arbitrary angles	137
5.	Vlasov Theory	141
5.1	Properties of the Vlasov Equation	141
5.2	Landau's Solution	143
5.3	Normal Modes in a Maxwellian Plasma	148
5.3.1	The plasma dispersion function	148
5.3.2	The Langmuir wave	149
5.3.3	The ion-acoustic wave	150
5.3.4	Macroscopic derivation of Langmuir and ion-acoustic modes	151
5.4	Physics of Landau Damping	153
5.5	Vlasov Theory in a General Equilibrium	155
5.6	Uniformly Magnetized Plasma	157
5.6.1	Perpendicular propagation ($\theta = \pi/2$)	159
5.6.2	Parallel propagation ($\theta = 0$)	161
5.6.3	Propagation at arbitrary angles	161
6.	Magnetohydrodynamics	163
6.1	From Hydrodynamics to Conservative MHD Equations	163
6.2	Convection and Diffusion	166
6.3	Frozen-in Field Lines	168
6.4	Magnetohydrostatic Equilibrium	171
6.5	Field-aligned Currents	173
6.5.1	Force-free fields	173
6.5.2	Grad-Shafranov equation	176
6.5.3	General properties of force-free fields	177
6.5.4	FACs and the magnetosphere-ionosphere coupling	178
6.5.5	Magnetic helicity	180
6.6	Alfvén Waves	183
6.6.1	Dispersion equation of MHD waves	183
6.6.2	MHD wave modes	184
6.7	Beyond MHD	186
6.7.1	Quasi-neutral hybrid approach	187
6.7.2	Kinetic Alfvén waves	189

7. Space Plasma Instabilities	191
7.1 Beam-plasma Modes	192
7.1.1 Two-stream instability	193
7.1.2 Buneman instability	195
7.2 Macroinstabilities	196
7.2.1 Rayleigh–Taylor instability	196
7.2.2 Farley–Buneman instability	199
7.2.3 Ballooning instability	200
7.2.4 Kelvin–Helmholtz instability	202
7.2.5 Firehose and mirror instabilities	204
7.2.6 Flux tube instabilities	206
7.3 Microinstabilities	207
7.3.1 Monotonically decreasing distribution function	207
7.3.2 Multiple-peaked distributions	208
7.3.3 Ion-acoustic instability	210
7.3.4 Electrostatic ion cyclotron instability	212
7.3.5 Current-driven instabilities perpendicular to $\mathbf{B}$	213
7.3.6 Electromagnetic cyclotron instabilities	215
7.3.7 Ion beam instabilities	217
8. Magnetic Reconnection	219
8.1 Basics of Reconnection	219
8.1.1 Classical MHD description of reconnection	220
8.1.2 The Sweet–Parker model	221
8.1.3 The Petschek model	223
8.1.4 Asymmetric reconnection	225
8.2 Collisionless Reconnection	227
8.2.1 The tearing mode	228
8.2.2 The collisionless tearing mode	229
8.2.3 Tearing mode or something else?	231
8.2.4 The Hall effect	232
8.3 Reconnection and Dynamo	236
8.3.1 Current generation at the magnetospheric boundary	236
8.3.2 Elements of solar dynamo theory	238
8.3.3 The kinematic $\alpha\omega$ dynamo	241
9. Plasma Radiation and Scattering	245
9.1 Simple Antennas	245
9.2 Radiation of a Moving Charge	248
9.3 Bremsstrahlung	251
9.4 Cyclotron and Synchrotron Radiation	255
9.5 Scattering from Plasma Fluctuations	258
9.6 Thomson Scattering	261

10. Transport and Diffusion in Space Plasmas	267
10.1 Particle Flux and Phase Space Density	267
10.2 Coordinates for Particle Flux Description	269
10.3 Elements of Fokker–Planck Theory	271
10.4 Quasi-Linear Diffusion Through Wave–Particle Interaction	273
10.5 Kinetic Equation with Fokker–Planck Terms	276
11. Shocks and Shock Acceleration	279
11.1 Basic Shock Formation	280
11.1.1 Steepening of continuous structures	280
11.1.2 Hydrodynamic shocks	282
11.2 Shocks in MHD	283
11.2.1 Perpendicular shocks	283
11.2.2 Oblique shocks	285
11.2.3 Rotational and tangential discontinuities	287
11.2.4 Thickness of the shock front	288
11.2.5 Collisionless shock wave structure	290
11.3 Particle Acceleration in Shock Waves	293
11.3.1 Shock drift acceleration	294
11.3.2 Diffusive shock acceleration	295
11.3.3 Shock surfing acceleration	297
12. Storms on the Sun	299
12.1 Prominences and Coronal Loops	300
12.2 Radio Storms on the Sun	302
12.2.1 Classification of radio emissions	303
12.2.2 Physical mechanisms for solar radio emissions	304
12.3 Solar Flares	307
12.3.1 Observational characteristics of solar flares	307
12.3.2 Physics of solar flares	311
12.4 Coronal Mass Ejections	314
12.4.1 CMEs near the Sun	315
12.4.2 Propagation time to 1 <i>AU</i>	317
12.4.3 Magnetic structure of ICMEs	318
12.5 CMEs, Flares and Particle Acceleration	320
13. Magnetospheric Storms and Substorms	323
13.1 What are Magnetic Storms and Substorms?	323
13.1.1 Storm basics	324
13.1.2 The concept of substorm	326
13.1.3 Observational signatures of substorms	326
13.2 Physics of Substorm Onset	333
13.2.1 The outside–in view	334
13.2.2 The inside–out view	339
13.2.3 External triggering of substorm expansion	342

13.2.4	Timing of substorm onset	342
13.3	Storm-Time Activity	345
13.3.1	Steady magnetospheric convection	345
13.3.2	Substorm-like activations and sawtooth Events	348
13.4	ICME–Storm Relationships	350
13.4.1	Geoeffectivity of an ICME	350
13.4.2	Different response to different drivers	352
13.5	Storms Driven by Fast Solar Wind	354
13.5.1	27-day recurrence of magnetospheric activity	354
13.5.2	Differences from ICME-driven storms	355
13.6	Energy Budgets of Storms and Substorms	357
13.6.1	Energy supply	357
13.6.2	Ring current energy	358
13.6.3	Ionospheric dissipation	360
13.6.4	Energy consumption farther in the magnetosphere	362
13.6.5	Energy transfer across the magnetopause	362
13.7	Superstorms and Polar Cap Potential Saturation	365
13.7.1	Quantification of the saturation	366
13.7.2	Hill–Siscoe formulation	366
13.7.3	The Alfvén wing approach	368
13.7.4	Magnetosheath force balance	369
14.	Storms in the Inner Magnetosphere	371
14.1	Dynamics of the Ring Current	372
14.1.1	Asymmetric structure of the ring current	372
14.1.2	Sources of the enhanced ring current	373
14.1.3	Role of substorms in storm evolution	376
14.1.4	Loss of ring current through charge exchange collisions	376
14.1.5	Pitch angle scattering by wave–particle interactions	379
14.1.6	ENA imaging of the ring current	381
14.2	Storm-Time Radiation Belts	382
14.2.1	Sources of radiation belt ions	382
14.2.2	Losses of radiation belt ions	383
14.2.3	Transport and acceleration of electrons	384
14.2.4	Electron losses	390
15.	Space Storms in the Atmosphere and on the Ground	393
15.1	Coupling to the Neutral Atmosphere	393
15.1.1	Heating of the thermosphere	394
15.1.2	Solar proton events and the middle atmosphere	394
15.2	Coupling to the Surface of the Earth	395
