Preface IX

List of Contributors XI

Color Plates XVII

Part One Quantum Mechanics Methods for Molecular Biophysics and Electronic Structure Calculations of Biomolecules 5

- 1 Quantum Molecular Biological Methods Using Density Functional Theory 7
Karl James Jalkanen, Sándor Suhai, and Henrik G. Bohr
- 2 Radiationless Auger-Like Electronic Transitions in Biomolecules: Bio-Augur Process 67
Henrik G. Bohr and F. Bary Malik
- 3 Excited State Dynamics in Biomolecules 93
Gerrit Groenhof, Lars V. Schäfer, Martial Boggio-Pasqua, and Michael A. Robb
- 4 Electron Interactions and Currents in CFT, a Current Functional Theory Applied to Molecules 135
Jens N. Bang, Henrik G. Bohr, and Joao da Providencia
- 5 Exploring Excited State Processes in Photosynthesis – Features of Photosynthetic Light Harvesting 167
Villy Sundstrom

VI Contents

Part Two	Studies of Motions of Biomolecules and Molecular Dynamics Calculations	193
6	Optical Tweezers Techniques <i>Lene B. Oddershede</i>	195
7	Protein Dynamics – Concepts and Experimental Tools <i>Hans Frauenfelder</i>	215
8	Molecular Dynamics Computations for Proteins: A Case Study in Membrane Ion Permeation <i>Igor Vorobyov and Toby W. Allen</i>	231
9	Dynamics of Individual Muscular Protein Molecules <i>Bjørn Gilbert Nielsen</i>	307
Part Three	Biomolecular Structures and Dynamics in Proteins, Lipids, and DNA	327
10	Protein–Lipid Interactions in Biological Membranes <i>Claus Helix Nielsen</i>	329
11	DNA Biomechanics <i>Wilma K. Olson, Annankoil R. Srinivasan, Andrew V. Colasanti, Guohui Zheng, and David Swigon</i>	359
12	Models of Membrane Fusion <i>Sylvio May</i>	383
Part Four	Radiation and Spectroscopy Methods in Molecular Biophysics	415
13	Raman Spectroscopy in Virus Structure Analysis <i>Daniel Němeček and George J. Thomas, Jr</i>	417
14	X-Ray Methods for Investigation of Structures of Lipid Assemblies <i>Huey W. Huang and Lin Yang</i>	457
15	The Use of Microwaves in Molecular Biophysics <i>Henrik G. Bohr, Mogens H. Jacobsen, and I.B. Laursen</i>	503
Part Five	Neurobiophysics and Ion Channels	521
16	Neurobiophysics <i>Oleg V. Kolomytkin and Andrew A. Marino</i>	523

17	Ion Channels	557
	<i>Olaf S. Andersen, Helgi I. Ingólfsson, and Jens A. Lundbæk</i>	
18	Physical Properties of Biological Membranes	593
	<i>Thomas Heimburg</i>	
Part Six	Techniques for Detecting Molecular Structures down to the Single Molecule Level	617
19	Chiral Raman and Single Molecule Spectroscopy	619
	<i>Salim Abdali and Ewan W. Blanch</i>	
20	Single Molecule Biophysics with Fluorescence	641
	<i>Michael Prummer and Christian Huebner</i>	
21	Biorheology	669
	<i>Rudolf Dietrich Bauer and Tilmann Volk</i>	
22	Lipid Membrane Technology	711
	<i>Luis A. Bagatolli</i>	
Part Seven	Physical Effects in Biomolecules and larger Organic Systems	741
23	Biological Effects of Electromagnetic and Particle Radiation	743
	<i>Jürgen Kiefer</i>	
24	Biological Effects of Sound and Ultrasound	809
	<i>Wesley L. Nyborg</i>	
25	Biosimulation and Computations in Systems Biology	839
	<i>Olga Sosnovtseva, Jakob L. Laugesen, and Erik Mosekilde</i>	
26	Organic Superconductors	867
	<i>Claus Schelde Jacobsen</i>	
Part Eight	Molecular Biophysics Applications in Medicine	893
27	Biomedical Imaging Technologies	895
	<i>William R. Hendee and Anthony B. Wolbarst</i>	
28	Raman Spectroscopy in Medicine	985
	<i>Christoph Krafft, Petra Rösch, and Jürgen Popp</i>	
	Index	1019
