

Quantum-Classical Correspondence

Dynamical Quantization and the Classical Limit

Bearbeitet von
A. O. Bolivar

1. Auflage 2004. Buch. xiii, 190 S. Hardcover

ISBN 978 3 540 20146 5

Format (B x L): 15,5 x 23,5 cm

Gewicht: 1040 g

[Weitere Fachgebiete > Mathematik > Stochastik > Wahrscheinlichkeitsrechnung](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1	Towards a Non-Galilean View of Physics	1
1.1	Isolated Systems: Galileo and Newton	1
1.1.1	Hamiltonianization of Physics	4
1.1.2	Quantum Physics	6
1.2	Open Systems	10
1.2.1	Prigogine: Irreversibility	10
1.2.2	Haken: Synergetics	12
1.2.3	Mandelbrot: Fractals	14
1.2.4	Lorenz and Ruelle: Dissipative Chaos	14
1.2.5	Our Model: Brownian Motion	16
2	Some Basics of Stochastic Processes	21
2.1	Motivation: Open Systems as Stochastic Processes	21
2.2	Probability Space	23
2.3	Stochastic Variables	26
2.3.1	Probabilistic Properties	26
2.3.2	Statistical Properties	28
2.4	Conditional Probability Space	31
2.4.1	Conditional Distribution Function	32
2.4.2	Conditional Density Function	32
2.5	Stochastic Processes	33
2.5.1	Fixed-Time Representation	39
2.5.2	Fixed-Point Representation	42
2.5.3	Classification	43
3	Classical Physics	53
3.1	Motivation: Dissipation and Fluctuation	53
3.2	Configuration Space	54
3.2.1	Einstein	54
3.2.2	Smoluchowski	62
3.2.3	Rayleigh	62
3.3	Phase Space	65

3.3.1	Langevin	65
3.3.2	Klein and Kramers	71
3.4	Deterministic Systems	76
3.4.1	Newton	76
3.4.2	Hamilton	78
3.4.3	Lagrange	79
3.4.4	Jacobi.....	79
3.5	Hamiltonianization of Physics.....	80
3.5.1	The Hamiltonian Dream.....	81
3.5.2	Caldeira–Leggett Approach	82
4	Quantum Physics	89
4.1	Motivation: The Problem of Quantization	89
4.2	Planck–Bohr Quantization	91
4.3	Heisenberg Quantization	92
4.4	Schrödinger Quantization	94
4.5	Dirac Quantization	95
4.6	Feynman Quantization.....	97
4.7	Nelson Quantization	102
4.8	Olavo Quantization.....	104
4.9	Dynamical Quantization	107
4.9.1	Quantization of the Markovian Fokker–Planck Equation	107
4.9.2	Quantization of the Non-Markovian Fokker–Planck Equation ..	111
4.9.3	Quantization of Anomalous Brownian Motion ...	114
4.10	Quantum Physics Without Quantization Processes	117
4.10.1	Isolated Systems.....	117
4.10.2	Open Systems.....	119
5	Classical Limit of Quantum Physics	121
5.1	Motivation: The Problem of the Classical Limit	121
5.2	Bohr Correspondence Principle	122
5.3	Ehrenfest Theorem	122
5.4	WKB Method	124
5.5	Feynman Method	125
5.6	Decoherence	126
5.7	Bohm Quantum Potential	129
5.8	Our Classical Limiting Process.....	132
5.8.1	Isolated Systems.....	133
5.8.2	Open Systems.....	141

6	Summary and Open Questions	145
6.1	Summary	145
6.2	Open Questions	149
A	Elements of Set Theory	151
A.1	Definitions	151
A.2	Algebraic Structure	152
A.3	Borel Field	154
A.4	Set Function and Point Function	154
B	Quantization of the Smoluchowski Equation	157
B.1	Constant Force	157
B.2	Linear Force	158
B.3	General Case	160
C	Dynamical Quantization Versus Dirac Quantization .	163
D	Dynamical Quantization Versus Feynman Quantization	165
E	Wigner Representation of Classical Mechanics	167
E.1	Dynamics	167
E.2	Kinematics	168
	References	171
	Index	185
