Introduction

T. Kobayashi	1
--------------------	---

Vortices in High- T_c Superconductors

S. Kuriki, S. Hirano, A. Maeda and T. Kiss	5
1. Introduction	5
2. Basic Physics of Vortices	7
2.1. Type-II Superconductivity and Vortex	7
2.2. Vortex Lattice, Bragg Glass	8
2.3. Motion of a Vortex: Flux Flow and Flux Creep	9
2.4. Microscopic Electronic Structure of Vortex Core	10
3. Vortices in High- T_c Superconductors	11
3.1. Characteristic Aspects of the Mixed State of High- T_c Superconductors	11
3.2. Vortices in High- T_c Superconductors	12
3.3. Equilibrium Phase Diagram	13
3.4. Dynamic Phase Diagram of Driven Vortices	15
3.5. Electronic States of Vortex Cores of High- T_c Superconductor ..	19
4. Vortex Dynamics in HTSC Thin Film	22
4.1. Thermally Depinning Transition	23
4.2. Electric Field vs Current Density Characteristics	26
4.3. Scaling Laws of Pinning and Iso-therm Scaling of E - J	28
4.4. Geometric Effect	33
4.5. Summary	33
5. Vortices in High- T_c Grain Boundary Junction	34
5.1. Direct Flux Detection Method	34
5.2. Magnetic Flux From a Single Vortex in Slotted YBCO	36
5.3. Long-distance Vortex Motion in Wide Grain Boundary Junction	38
5.4. Suppression of Long-distance Vortex Motion in Grain Boundary Junctions	40
5.5. $1/f$ Behavior of the Flux Noise of Slotted Grain Boundary Junctions	42

5.6. Flux Noise of Directly Coupled SQUID Magnetometers	44
References	45

Observation of Vortices

S. Ohshima, K. Tanabe, T. Morishita and M. Tonouchi	53
1. Introduction	53
2. Observation of a Vortex Pattern and Movement by the High-resolution Bitter Method	56
2.1. Experimental Procedure	56
2.2. The Observation of a Static Vortex Distribution	57
2.3. The Observation of a Dynamic Vortex Behavior	62
3. Scanning SQUID Observation	65
3.1. SSM System and Observation Technique	66
3.2. Flux Expulsion in Narrow High- T_c Thin Film Patterns	68
3.3. Flux Trapping in High- T_c Thin Film Patterns with Moats	70
3.4. Flux Trapping in High- T_c Films with a Bicrystal Grain Boundary	74
3.5. Observation of Multilayered Electronic Devices	76
3.6. Summary	77
4. Magneto-Optical Imaging	77
4.1. Experimental Method	78
4.2. Studies of Flux Density Profiles and Critical States	84
4.3. Dynamic Observations of Magnetic Flux	84
4.4. Differential Magneto-Optical Technique	85
4.5. Real-Time Observations of Single Vortex	88
4.6. Summary	88
5. Terahertz Radiation Imaging	89
5.1. THz Radiaton Imaging System	90
5.2. Vortex Penetration Due to Transport Supercurrent	93
5.3. Vortex Entry at Weak Magnetic Field	94
5.4. Vortex Penetration Due to a Strong Magnetic Field	95
5.5. Temperature Dependence of the Trapped-Vortex Behavior	96
5.6. Summary	99
References	100

New Aspect of Vortex in HTSC

M. Tonouchi, G. Oya, Y. Matsuda and K. Kumagai	103
1. Introduction	103
2. Electrostatics and Charge Distribution in the Vortex State of Type-II Superconductors	104
2.1. Electrostatics of the Vortices	105
2.2. Hall Anomaly and Vortex Charge	112
2.3. Summary	116
3. Vortices in Intrinsic Josephson Junctions	116
3.1. Basic Model for a Stack of Josephson Junctions	118

3.2.	Basic Properties of Intrinsic Josephson Junctions	120
3.3.	Properties of Vortices in Intrinsic Josephson Junctions	122
3.4.	Behavior of Vortices in Stacks of Josephson Junctions	125
3.5.	Summary	126
4.	Optical Control of Vortices	127
4.1.	Idea for Optical Vortex Generation	127
4.2.	Experimental Setup	130
4.3.	Optical Vortex Generation with Optical Pulses	130
4.4.	Single Shot Pulse Operation	133
4.5.	Summary	135
	References	136

High- T_c SQUIDS

	K. Enpuku, S. Kuriki and S. Tanaka	141
1.	Introduction	141
2.	HTSC Junctions for SQUIDS	142
2.1.	Transport Properties	142
2.2.	Noise Rounding and Excess Current	145
2.3.	$1/f$ Noise	146
2.4.	Dependence of SQUID Performance on Junction Parameters	147
2.5.	SQUID Inductance	150
2.6.	Pickup Coil and Coupling Circuit	152
2.7.	Thermal Activation in the Flux Dam	154
2.8.	Switch for Opening and Closing the Pickup Coil	157
3.	SQUID Control System	159
3.1.	Input Equivalent Noise	159
3.2.	Bias-Reversal Schemes	160
3.3.	Readout Electronics	164
4.	Noise Reduction in HTSC-SQUIDS	165
4.1.	Low Frequency Noises in HTSC-SQUIDS	166
4.2.	Direct-Coupled Magnetometers	166
4.3.	Effects of Slots and Holes on the Reduction of Low frequency Noise	167
4.4.	Flux Penetration	169
4.5.	Behaviors of Flux Dams	171
5.	Development of SQUIDS for Microscopes	177
	References	182

Applications of HTSC SQUIDS

	H. Itozaki, K. Sakuta, T. Kobayashi, K. Enpuku, N. Kasai, Y. Fujinawa, H. Iitaka, K. Nikawa and M. Hidaka	185
1.	Introduction	185
2.	HTSC-SQUID for Commercial Use	187
2.1.	SQUID Kit	187
2.2.	Advanced SQUID Kit	190

2.3.	Commercialization of SQUID	193
3.	Challenge to Shield-Less HTSC-SQUID Magnetocardiography	194
3.1.	Open-SQUID Magnetocardiography Equipment	195
3.2.	Adaptive Noise Canceling Process	198
3.3.	Active Noise Control System for DC Fluctuations	201
3.4.	Summary	204
4.	Biological Immunoassays	205
4.1.	Measurement Principle	205
4.2.	Measurement System	206
5.	Monitoring Environmental Magnetic Field Related to Earthquakes	214
5.1.	ULF Variation as a Precursory Phenomenon of an Earthquake	215
5.2.	Requirement on the Measurement System of ULF Radiation	216
5.3.	SQUID System for ULF Magnetic Field Measurement	218
5.4.	Field Measurement	220
5.5.	Future Problem	224
6.	Laser-SQUID Microscope for LSI Chip Defect Analysis	224
6.1.	The Laser-SQUID System	225
6.2.	Prototype System Setup	227
6.3.	Basic Demonstration Using 488 nm Laser	227
6.4.	Backside Failure Identification before Bondpad Patterning ..	228
6.5.	Defective Chip Identification after Bonding and Packaging ..	230
6.6.	Localization from Whole Chip Area to Micrometer Area	231
6.7.	Conclusions	232
7.	Small-Scale HTSC Digital Applications	233
7.1.	Sampler	234
7.2.	Analog to Digital Converter	240
7.3.	Summary	244
	References	244

Material Technology for Vortex Electronics

	T. Kobayashi, S. Oda, O. Michikami and T. Terashima	249
1.	Introduction	249
2.	Pulsed Laser Deposition Method for HTSC and Related Oxide Film Formation	250
2.1.	Eclipse PLD	251
2.2.	Aurora PLD	252
2.3.	Application of the Eclipse-Aurora PLD Method to Electronics Devices	258
2.4.	Summary	260
3.	MOCVD for Thin Film Growth	260
3.1.	Atomic-Layer MOCVD System	261
3.2.	Real-Time Process Monitoring	262
3.3.	Ga Addition to YBCO Thin Films	267
3.4.	Summary	270

4. Sputter Growth of HTSC Thin Films	270
4.1. Fundamental Features of Sputtering	270
4.2. Synthesis of High Quality Films and Large Sized Film Deposition	271
4.3. Epitaxial Growth of $\text{EuBa}_2\text{Cu}_3\text{O}_7$ Films on R-plane Sapphires	273
4.4. Application of Sputter Plasma to Recovery Treatment	276
4.5. Summary	278
5. Preparation of Ultrathin Films and Superlattices of high- T_c Oxides by MBE	279
5.1. MBE Growth of Oxide Thin Films	280
5.2. RHEED Oscillations	280
5.3. Superconductivity of Ultrathin YBCO Films	282
5.4. Superconducting Transition of Ultrathin Films and Superlattices in Magnetic Fields	286
5.5. Summary	289
