Foreword	v
Preface	vii
List of Symbols	xxiii
1. Single Crystal Growth.....	1
1.1. Introduction.....	1
1.2. Bulk single crystal growth techniques	2
1.2.1. Overview	2
1.2.2. Czochralski techniques	3
1.2.3. Bridgman techniques	4
1.3. Liquid phase epitaxy	7
1.3.1. Overview	7
1.3.2. Melt epitaxy	9
1.3.3. Liquid phase electroepitaxy (LPEE)	10
1.4. Vapor phase epitaxy (VPE).....	11
1.5. Metalorganic chemical vapor deposition (MOCVD).....	14
1.5.1. Introduction.....	14
1.5.2. MOCVD precursors	16
1.5.3. Growth chamber designs.....	18
1.5.4. In situ characterization.....	20
1.6. Molecular beam epitaxy (MBE).....	27
1.6.1. Introduction.....	27
1.6.2. Effusion cells used in MBE systems.....	28
1.6.3. Gas source MBE	33
1.6.4. Metalorganic MBE.....	35
1.7. Summary	36
References	38
Further reading.....	39
Problems	39
2. Semiconductor Device Technology	41
2.1. Introduction.....	41

2.2. Oxidation.....	42
2.2.1. Oxidation process.....	42
2.2.2. Modeling of oxidation.....	44
2.2.3. Factors influencing oxidation rate.....	50
2.2.4. Oxide thickness characterization	52
2.3. Diffusion of dopants.....	56
2.3.1. Diffusion process	57
2.3.2. Constant-source diffusion: predeposition	62
2.3.3. Limited-source diffusion: drive-in	64
2.3.4. Junction formation	65
2.4. Ion implantation of dopants	68
2.4.1. Ion generation	69
2.4.2. Parameters of ion implantation	70
2.4.3. Ion range distribution.....	71
2.5. Characterization of diffused and implanted layers.....	74
2.5.1. Sheet resistivity	74
2.5.2. Junction depth	76
2.5.3. Impurity concentration.....	78
2.6. Summary	79
References.....	80
Further reading.....	80
Problems	80
 3. Semiconductor Device Processing.....	 83
3.1. Introduction.....	84
3.2. Photolithography	84
3.2.1. Wafer preparation	84
3.2.2. Positive and negative photoresists	85
3.2.3. Mask alignment and fabrication.....	89
3.2.4. Exposure	91
3.2.5. Development.....	92
3.2.6. Direct patterning and lift-off techniques	93
3.2.7. Alternative lithographic techniques	95
3.3. Electron-beam lithography.....	98
3.3.1. Electron-beam lithography system.....	98
3.3.2. Electron-beam lithography process.....	100
3.3.3. Parameters of electron-beam lithography	102
3.3.4. Multilayer resist systems.....	104
3.3.5. Examples of structures.....	106
3.4. Etching	107
3.4.1. Wet chemical etching.....	107
3.4.2. Plasma etching	110
3.4.3. Reactive ion etching.....	114

3.4.4. Sputter etching	114
3.4.5. Ion milling	115
3.5. Metallization	116
3.5.1. Metal interconnections	116
3.5.2. Vacuum evaporation	118
3.5.3. Sputtering deposition	121
3.6. Packaging of devices	122
3.6.1. Dicing	122
3.6.2. Wire bonding	123
3.6.3. Packaging	126
3.7. Summary	128
References	128
Further reading	128
Problems	129
 4. Semiconductor p - n and Metal-Semiconductor Junctions	133
4.1. Introduction	133
4.2. Ideal p - n junction at equilibrium	134
4.2.1. Ideal p - n junction	134
4.2.2. Depletion approximation	135
4.2.3. Built-in electric field	140
4.2.4. Built-in potential	141
4.2.5. Depletion width	145
4.2.6. Energy band profile and Fermi energy	145
4.3. Non-equilibrium properties of p - n junctions	147
4.3.1. Forward bias: a qualitative description	148
4.3.2. Reverse bias: a qualitative description	151
4.3.3. A quantitative description	153
4.3.4. Ideal p - n junction diode equation	155
4.3.5. Minority and majority carrier currents in neutral regions	161
4.4. Metal-semiconductor junctions	163
4.4.1. Formalism	164
4.4.2. Schottky and ohmic contacts	166
4.5. Summary	169
Further reading	170
Problems	170
 5. Transistors	173
5.1. Introduction	173
5.2. Overview of amplification and switching	174
5.3. Bipolar junction transistors	176
5.3.1. Principles of operation for bipolar junction transistors	177

5.3.2. Amplification process using BJTs	178
5.3.3. Electrical charge distribution and transport in BJTs ...	179
5.3.4. Current gain	183
5.3.5. Typical BJT configurations.....	186
5.3.6. Deviations from the ideal BJT case	189
5.4. Heterojunction bipolar transistors	190
5.4.1. AlGaAs/GaAs HBT	191
5.4.2. GaInP/GaAs HBT	193
5.5. Field effect transistors	196
5.5.1. JFETs	196
5.5.2. JFET gate control	197
5.5.3. JFET current-voltage characteristics.....	198
5.5.4. MOSFETs	200
5.5.5. Deviations from the ideal MOSFET case	202
5.6. Application specific transistors	203
5.7. Summary	204
References	204
Problems	205
 6. Semiconductor Lasers	 209
6.1. Introduction.....	209
6.2. Types of lasers	210
6.3. General laser theory	211
6.3.1. Stimulated emission.....	212
6.3.2. Resonant cavity	215
6.3.3. Waveguides.....	216
6.3.4. Laser propagation and beam divergence.....	225
6.3.5. Waveguide design considerations.....	228
6.4. Ruby laser	228
6.5. Semiconductor lasers	232
6.5.1. Population inversion	233
6.5.2. Threshold condition and output power	234
6.5.3. Linewidth of semiconductor laser diodes	238
6.5.4. Homojunction lasers	239
6.5.5. Heterojunction lasers	239
6.5.6. Device fabrication.....	241
6.5.7. Separate confinement and quantum well lasers	246
6.5.8. Laser packaging	249
6.5.9. Distributed feedback lasers	249
6.5.10. Material choices for common interband lasers	251
6.5.11. Interband lasers	252
6.5.12. Quantum cascade lasers	255
6.5.13. Type II lasers.....	257

6.5.14. Vertical cavity surface emitting lasers	260
6.5.15. Low-dimensional lasers	262
6.5.16. Raman lasers	264
6.6. Summary	265
References	266
Further reading	268
Problems	269
 7. Quantum Cascade Lasers	 271
7.1. Introduction	272
7.2. Basic operation principles	273
7.2.1. Intersubband transitions	274
7.2.2. Cascading	275
7.2.3. Rate equation	276
7.2.4. Polar optical phonon resonance	283
7.3. The components of a quantum cascade laser	285
7.3.1. Core heterostructure	285
7.3.2. Laser waveguide	288
7.4. Making a quantum cascade laser	289
7.4.1. Epitaxial growth and material characterization	289
7.4.2. Processing and packaging	290
7.5. Device performance	292
7.5.1. Power-current-voltage characteristics	292
7.5.2. Temperature dependent characteristics	294
7.5.3. Wall plug efficiency	296
7.5.4. Spectra and far field	299
7.6. Wall plug efficiency optimization	300
7.6.1. Electrical contact resistance	300
7.6.2. Waveguide geometry	301
7.6.3. Bonding method	304
7.7. Power scaling	306
7.8. Photonic crystal distributed feedback quantum cascade lasers	 308
7.8.1. Pattern design	309
7.8.2. Coupling coefficients	311
7.8.3. Testing results	312
7.9. Quantum cascade lasers at different wavelengths	314
7.9.1. Short wavelength quantum cascade lasers ($<4\text{ }\mu\text{m}$)	314
7.9.2. Mid wavelength quantum cascade lasers ($4\text{--}9\text{ }\mu\text{m}$)	315
7.9.3. Long wavelength quantum cascade lasers ($>9\text{ }\mu\text{m}$)	315
7.10. Summary	316
References	316
Further reading	317

Problems	318
8. Photodetectors: General Concepts	321
8.1. Introduction.....	321
8.2. Electromagnetic radiation	323
8.3. Photodetector parameters	325
8.3.1. Responsivity.....	326
8.3.2. Noise in photodetectors.....	326
8.3.3. Noise mechanisms	329
8.3.4. Detectivity.....	332
8.3.5. Detectivity limits and BLIP	333
8.3.6. Frequency response.....	335
8.4. Thermal detectors.....	335
8.5. Summary.....	339
References.....	339
Further reading.....	339
Problems	339
9. Photon Detectors	343
9.1. Introduction.....	343
9.2. Types of photon detectors	345
9.2.1. Photoconductive detectors	345
9.2.2. Photovoltaic detectors	348
9.3. Examples of photon detectors	351
9.3.1. p-i-n photodiodes	351
9.3.2. Avalanche photodiodes.....	353
9.3.3. Schottky barrier photodiodes	355
9.3.4. Metal-semiconductor-metal photodiodes.....	357
9.3.5. Type II superlattice photodetectors.....	357
9.3.6. Photoelectromagnetic detectors	360
9.3.7. Quantum well intersubband photodetectors.....	361
9.3.8. Quantum dot infrared photodetectors	362
9.4. Focal Plane Arrays.....	363
9.5. Summary.....	364
References.....	364
Further reading.....	365
Problems	365
10. Type-II InAs/GaSb Superlattice Photon Detectors	367
10.1. Introduction.....	367
10.2. Material system and variants of Type II superlattices.....	368
10.2.1. The 6.1 angstrom family	368
10.2.2. Type II InAs/GaSb superlattice.....	370

10.2.3. Variants of Sb-based superlattices	370
10.3. Historic development of Type II superlattice photodetectors	374
10.4. Physics of Type II InAs/GaSb Superlattices	376
10.4.1. Qualitative description	376
10.4.2. Quantitative calculations of electronic bandstructure	378
10.5. Advantages of Type II superlattice	381
10.5.1. Band gap engineering	381
10.5.2. Auger suppression	382
10.5.3. Large effective mass	382
10.5.4. Normal incident, broad band absorption	383
10.5.5. Good uniformity	384
10.6. Material growth and characterization	385
10.7. Device fabrication	387
10.7.1. Single element device for testing	387
10.7.2. Focal plane array fabrication	388
10.8. Summary	390
References	390
Further reading	392
Problems	392
11. Quantum Dot Infrared Photodetectors	395
11.1. Introduction	396
11.1.1. Operating principles of QWIPs and QDIPs	396
11.1.2. Photocurrent	397
11.1.3. Dark current	399
11.1.4. Noise	399
11.2. Advantages of QDIPs	400
11.2.1. Introduction	400
11.2.2. High gain and the phonon bottleneck	400
11.2.3. Low dark current	401
11.2.4. Normal incidence absorption	402
11.2.5. Versatility	403
11.2.6. Summary	403
11.3. Quantum dot fabrication for QDIPs	404
11.3.1. Introduction	404
11.3.2. The formation of quantum dots in the Stranski- Krastanov growth mode	405
11.3.3. Properties of Stranski-Krastanov grown dots and their effect on QDIP performance	406
11.3.4. Quantum dot size	407
11.3.5. Quantum dot shape	408
11.3.6. Quantum dot density	409

11.3.7. Quantum dot uniformity	410
11.3.8. Conclusion and future directions for dot fabrication	412
11.4. Review of actual QDIP performance	412
11.4.1. Introduction.....	412
11.4.2. High operating temperature	412
11.4.3. FPA imaging.....	416
11.4.4. Summary	420
11.5. Summary	420
References.....	421
Further reading.....	422
Problems	422
 12. Single-Photon Avalanche Photodiodes	425
12.1. Introduction.....	425
12.2. Avalanche photodetectors, linear mode	427
12.2.1. Device fabrication.....	427
12.2.2. Linear-mode operation.....	429
12.2.3. Excess noise.....	433
12.3. Examples of APD structures	434
12.3.1. Reach-through avalanche photodiodes.....	435
12.3.2. Separate absorption charge multiplication (SACM) APD.....	436
12.4. Geiger mode operation.....	436
12.4.1. Basic theory.....	436
12.4.2. Passive avalanche quenching.....	440
12.4.3. Active avalanche quenching	441
12.4.4. Gated detection	442
12.4.5. Device limitations	445
12.4.6. After-pulsing.....	446
12.5. Examples of single-photon avalanche photodiodes	447
12.5.1. Silicon single-photon avalanche diodes.....	447
12.5.2. InGaAs/InP single-photon avalanche diodes	449
12.5.3. GaN single-photon avalanche diodes.....	450
12.6. Summary	452
References.....	453
Further reading.....	454
Problems	454
 13. Terahertz Device Technology	457
13.1. Introduction.....	457
13.2. Applications	458
13.2.1. THz spectroscopy.....	458

13.2.2. T-ray imaging.....	460
13.2.3. THz research tool.....	462
13.3. Broadband terahertz sources	464
13.4. Narrow band terahertz sources.....	466
13.4.1. Optical converter.....	466
13.4.2. Optically pumped gas lasers	469
13.4.3. Semiconductor source based on Silicon and Germanium.....	469
13.5. Quantum cascade terahertz sources	472
13.5.1. GaAs based terahertz QCLs.....	472
13.5.2. InP based terahertz QCLs	473
13.6. Magnetic field effects.....	474
13.7. Difference frequency generation.....	480
13.8. GaN QCLs for high temperature operation.....	481
13.9. Summary	487
References.....	488
Further reading.....	493
Problems	493
Appendices	497
A.1. Physical constants.....	499
A.2. International system of units (SI units)	501
A.3. Physical properties of elements in the periodic table	503
A.4. Physical properties of important semiconductors.....	517
A.5. Thermionic emission	521
A.6. Minority carrier lifetime measurement.....	525
A.7. Advanced topics in Type-II photodetectors	533
A.8. Physical properties and safety information of metalorganics.....	543

Technology of Quantum Devices

Razeghi, M.

2010, XXIII, 546 p. 100 illus., Hardcover
