Preface	xi
Acknowledgements	xxi
1 Algebra	1
1.1 Introduction	1
1.2 Algebras	2
1.2.1 Graded Algebras	8
1.3 Kac–Moody Algebras	10
1.4 Clifford Algebras	14
1.5 Hopf Algebras	20
1.5.1 Quantum Groups	21
1.6 Monstrous Moonshine	21
1.6.1 Finite Simple Groups	23
1.6.2 Modular Groups and Modular Functions	26
1.6.3 The monster and the Moonshine Conjectures	28
2 Topology	33
2.1 Introduction	33
2.2 Point Set Topology	35
2.3 Homotopy Groups	38
2.3.1 Bott Periodicity	49
2.4 Singular Homology and Cohomology	50
2.5 de Rham Cohomology	58
2.5.1 The Intersection Form	60
2.6 Topological Manifolds	61
2.6.1 Topology of 2-Manifolds	61
2.6.2 Topology of 3-Manifolds	62
2.6.3 Topology of 4-manifolds	64
2.7 The Hopf Invariant	68
2.7.1 Kervaire invariant	70

3	Manifolds	73
3.1	Introduction	73
3.2	Differential Manifolds	74
3.3	Tensors and Differential Forms	82
3.4	Pseudo-Riemannian Manifolds	88
3.5	Symplectic Manifolds	92
3.6	Lie Groups	95
4	Bundles and Connections	107
4.1	Introduction	107
4.2	Principal Bundles	108
4.3	Associated Bundles	116
4.4	Connections and Curvature	119
4.4.1	Universal Connections	125
4.5	Covariant Derivative	127
4.6	Linear Connections	130
4.7	Generalized Connections	135
5	Characteristic Classes	137
5.1	Introduction	137
5.2	Classifying Spaces	138
5.3	Characteristic Classes	139
5.3.1	Secondary Characteristic Classes	153
5.4	K -theory	157
5.5	Index Theorems	164
6	Theory of Fields, I: Classical	169
6.1	Introduction	169
6.2	Physical Background	170
6.3	Gauge Fields	179
6.4	The Space of Gauge Potentials	185
6.5	Gribov Ambiguity	192
6.6	Matter Fields	196
6.7	Gravitational Field Equations	200
6.8	Geometrization Conjecture and Gravity	204
7	Theory of Fields, II: Quantum and Topological	207
7.1	Introduction	207
7.2	Non-perturbative Methods	208
7.3	Semiclassical Approximation	216
7.3.1	Zeta Function Regularization	217
7.3.2	Heat Kernel Regularization	218
7.4	Topological Classical Field Theories (TCFTs)	220
7.4.1	Donaldson Invariants	222
7.4.2	Topological Gravity	223
7.4.3	Chern–Simons (CS) Theory	224

7.5	Topological Quantum Field Theories (TQFTs)	225
7.5.1	Atiyah–Segal Axioms for TQFT	232
8	Yang–Mills–Higgs Fields	235
8.1	Introduction	235
8.2	Electromagnetic Fields	236
8.2.1	Motion in an Electromagnetic Field	239
8.2.2	The Bohm–Aharonov Effect	242
8.3	Yang–Mills Fields	244
8.4	Non-dual Solutions	252
8.5	Yang–Mills–Higgs Fields	255
8.5.1	Monopoles	257
8.6	Spontaneous Symmetry Breaking	259
8.7	Electroweak Theory	263
8.7.1	The Standard Model	268
8.8	Invariant Connections	271
9	4-Manifold Invariants	275
9.1	Introduction	275
9.2	Moduli Spaces of Instantons	276
9.2.1	Atiyah–Jones Conjecture	283
9.3	Topology and Geometry of Moduli Spaces	290
9.3.1	Geometry of Moduli Spaces	294
9.4	Donaldson Polynomials	296
9.4.1	Structure of Polynomial Invariants	301
9.4.2	Relative Invariants and Gluing	303
9.5	Seiberg–Witten Theory	305
9.5.1	Spin Structures and Dirac Operators	306
9.5.2	The Seiberg–Witten (SW) Invariants	307
9.6	Relation between SW and Donaldson Invariants	310
9.6.1	Property P Conjecture	311
10	3-Manifold Invariants	313
10.1	Introduction	313
10.2	Witten Complex and Morse Theory	314
10.3	Chern–Simons Theory	319
10.4	Casson Invariant	325
10.5	Floer Homology	326
10.6	Integer-Graded Instanton Homology	333
10.7	WRT Invariants	338
10.7.1	CFT Approach to WRT Invariants	340
10.7.2	WRT Invariants via Quantum Groups	342
10.8	Chern–Simons and String Theory	345
10.8.1	WRT Invariants and String Amplitudes	347

11 Knot and Link Invariants	351
11.1 Introduction	351
11.2 Invariants of Knots and Links	352
11.3 TQFT Approach to Knot Invariants	362
11.4 Vassiliev Invariants of Singular Knots	367
11.5 Self-linking Invariants of Knots	368
11.6 Categorification of the Jones Polynomial	371
Epilogue	377
Appendix A Correlation of Terminology	379
Appendix B Background Notes	381
Appendix C Categories and Chain Complexes	393
Appendix D Operator Theory	403
References	419
Index	435
