

Contents

1	Introduction to Reliability and Its Importance	1
1.1	Introduction.....	1
	References.....	2
2	Reliability Metrology.....	3
2.1	The Definition of Reliability	3
2.2	Empirical Models.....	3
2.3	Physical Models	4
2.4	Reliability Information.....	5
2.5	Interconnection Reliability	9
2.6	The Levels of Interconnections	12
2.7	Reliability Function	13
2.7.1	Exponential Distribution	15
2.7.2	Weibull Distribution.....	19
2.7.3	Log-Normal Distribution.....	22
2.7.4	Physical Basis of the Distributions.....	23
2.8	A Generic Weibull Distribution Model to Predict Reliability of Microsystems.....	24
2.8.1	Failure-Criteria Dependence of the Location Parameter	26
2.8.2	Least Squares Estimation	27
2.8.3	The Experiment and Data	28
2.8.4	Analysis and the Results	31
2.8.5	Application of the Results.....	32
	Exercises	32
	References.....	33

3	General Failure Mechanisms of Microsystems	35
3.1	Introduction	35
3.2	Mechanical and Thermomechanical Failure Mechanisms	37
3.2.1	Low Cycle Fatigue	38
3.2.2	Creep	40
3.3	Brittle Fracture	41
3.4	IC Level Failure Mechanisms	41
3.4.1	Electromigration	42
3.4.2	Electrostatic Discharge	43
3.5	Corrosion	45
3.6	Plastic Package Popcorning	46
	Exercises	47
	References	48
4	Solder Joint Reliability	49
4.1	Microstructure of Solder Joints	49
4.1.1	Microstructure of Eutectic Sn–37Pb	50
4.1.2	Microstructural Stability and Interfacial Interactions	51
4.1.3	Microstructure of Eutectic Sn–3.5Ag	52
4.1.4	Microstructural Evolution and Interfacial Interactions	52
4.1.5	Microstructure of Sn–Ag–Cu Alloys	53
4.1.6	Microstructural Evolution and Interfacial Interactions	54
4.1.7	Microstructure of Sn–3.5Ag–3Bi	55
4.1.8	Microstructure of Sn–0.7Cu–0.4Co	56
4.2	Mechanical Reliability of Solder Joints	58
4.2.1	Fatigue Failure	59
4.3	General Solder Joint Failure Mechanism	60
4.3.1	Effect of Second Level Solder Interconnection Failure	64
4.3.2	Standards Related to Solder Joint Reliability Testing	66
	Exercises	67
	References	67
5	Conductive Adhesive Joint Reliability	71
5.1	Introduction to Conductive Adhesives	71
5.2	Isotropic Conductive Adhesive	72
5.3	Reliability of ICA Interconnects	73
5.3.1	Effect of Metallization	73
5.3.2	Effect of Curing Degree	74
5.3.3	Impact Strength	75
5.3.4	Failure Mechanisms	76
5.3.5	Electron Conduction Through Nanoparticles in ICA	80
5.4	Reliability of ACA Interconnects	81
5.4.1	Effects of Assembly Process	83
5.4.2	Effects of Substrate and Component	85

5.4.3 Degradation Due to Moisture Absorption	87
5.4.4 Oxidation and Crack Growth.....	88
5.4.5 Probabilities of Open and Bridging	91
5.4.6 ACA Flow During Bonding.....	93
5.4.7 Electrical Conduction Development and Residual Stresses.....	94
Exercises	96
References.....	97
6 Accelerated Testing	99
6.1 Fatigue Failure Analysis for Accelerated Testing	99
6.2 Thermal Fatigue	100
6.3 Effect of Different Test Factors on Thermal Fatigue Life.....	102
6.4 Isothermal Mechanical LCF.....	103
6.4.1 Effect of Frequency	105
6.4.2 Effect of Dwell (Hold) Time.....	106
6.4.3 Effect of Strain Range and Strain Rate	107
6.4.4 Effect of Temperature	107
6.4.5 Effect of Failure Definition	107
6.4.6 Effect of Other Factors.....	108
Exercises	109
References.....	112
7 Reliability Design for Manufacturability	115
7.1 Lead-Free Soldering.....	115
7.1.1 Higher Process Temperature	115
7.2 Other Issues.....	117
7.2.1 Lead Contamination.....	118
7.2.2 Tin Whiskers	119
7.3 Inspection.....	120
7.4 Repair and Rework	121
Exercises	121
References.....	122
8 Component Reliability	123
8.1 Introduction.....	123
8.2 Empirical Models.....	124
8.3 The Methodology.....	125
8.4 Empirical Models in System Reliability Analysis	126
8.5 Limitations of Empirical Models and Recommendations on Use ..	127
Exercises	130
References.....	130

9	System Level Reliability	133
9.1	Introduction.....	133
9.2	Some Constant Hazard Rate Approximations of the Weibull Distribution.....	137
9.3	Resulting Functions and Hazard Rates.....	140
9.4	Properties of Different Options	143
9.5	Comparison of the Selected Options.....	145
9.6	Selection of Time Intervals	145
9.7	The Motivation for Selecting Two-Parameter Weibull Distribution.....	146
9.8	Constant Failure Rate and Its Origin in the Field Failure Data	147
	Exercises	147
	References.....	148
10	Reliability and Quality Management of Microsystem.....	149
10.1	Introduction	149
10.2	Activity 1: Product Requirements and Constraints.....	152
10.3	Activity 2: Product Life-Cycle Conditions	152
10.4	Activity 3: Selection and Characterization of Alternative Product Architectures and Manufacturing Processes.....	153
10.5	Activity 4: Qualification of Packaging Concepts and Manufacturing Processes.....	154
	10.5.1 Manufacturability	155
	10.5.2 Reliability	155
	10.5.3 Maintainability	161
	10.5.4 Environmental Compatibility.....	161
10.6	Activity 5: Risk Management and Balance of Functionality, Quality, and Cost Requirements	161
	10.6.1 Risk Management of Supplied Materials and Parts	162
	10.6.2 Risk Management of Manufacturing Processes and New Technologies.....	162
	10.6.3 Failure Modes and Effects Analysis.....	163
	10.6.4 Protective Measures.....	163
10.7	Activity 6: Quality Controls and Improvement of Design, Materials, Parts, and Manufacturing Processes.....	163
	10.7.1 Design Defects	164
	10.7.2 Defects Caused by Manufacturing Processes.....	165
10.8	Activity 7: Failure Analysis and Feedback of Gained Knowledge.....	167
	Exercises	167
	References.....	168
