

## Progress in Nano-Electro Optics IV

Characterization of Nano-Optical Materials and Optical Near-Field Interactions

Bearbeitet von  
Motoichi Ohtsu

1. Auflage 2005. Buch. xiv, 208 S. Hardcover

ISBN 978 3 540 23236 0

Format (B x L): 15,5 x 23,5 cm

Gewicht: 1090 g

[Weitere Fachgebiete > Physik, Astronomie > Elektrodynamik, Optik > Quantenoptik,  
Nichtlineare Optik, Laserphysik](#)

schnell und portofrei erhältlich bei

  
DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung [beck-shop.de](http://beck-shop.de) ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

## Near-Field Imaging of Magnetic Domains

|                                                  |    |
|--------------------------------------------------|----|
| Gereon Meyer, Andreas Bauer, Günter Kaindl ..... | 1  |
| 1 Introduction .....                             | 1  |
| 2 Magneto-Optical SNOM .....                     | 2  |
| 2.1 Faraday Effect and Kerr Effect .....         | 2  |
| 2.2 Sagnac Interferometer .....                  | 4  |
| 2.3 Kerr Microscopy .....                        | 7  |
| 2.4 Domain Contrast in SNOM .....                | 8  |
| 3 Experimental Details .....                     | 11 |
| 3.1 UHV System .....                             | 11 |
| 3.2 UHV-SNOM Setup .....                         | 14 |
| 3.3 Sagnac-SNOM Setup .....                      | 16 |
| 3.4 Performance Tests .....                      | 18 |
| 4 Magnetic Domains in Ultrathin Films .....      | 23 |
| 4.1 Spin-Reorientation Transition .....          | 24 |
| 4.2 Stripe-Domain Patterns .....                 | 25 |
| 4.3 Domain Contrast .....                        | 27 |
| 4.4 Study of Magnetization Reversal .....        | 30 |
| 4.5 Transformation of Stripe Domains .....       | 33 |
| 5 Summary and Future Prospects .....             | 36 |
| References .....                                 | 38 |

## Improvement of Interface Quality in Cleaved-Edge-Overgrowth GaAs Quantum Wires Based on Micro-optical Characterization

|                                                                              |    |
|------------------------------------------------------------------------------|----|
| Masahiro Yoshita, Hidefumi Akiyama .....                                     | 43 |
| 1 Introduction .....                                                         | 43 |
| 2 T-Shaped Quantum Wires Grown<br>by Cleaved-Edge Overgrowth Method .....    | 44 |
| 2.1 Cleaved-Edge Overgrowth Method with MBE .....                            | 44 |
| 2.2 Micro-PL Imaging and Spectroscopy Setup<br>to Characterize T Wires ..... | 46 |
| 2.3 PL of T Wires Grown by the Original CEO Method .....                     | 47 |

|     |                                                                                                      |    |
|-----|------------------------------------------------------------------------------------------------------|----|
| 3   | Interface Roughness and Modulated Electronic States<br>in (110) GaAs QWs .....                       | 48 |
| 3.1 | Preparation of (110) GaAs QWs .....                                                                  | 48 |
| 3.2 | Macro-PL of the (110) GaAs QWs .....                                                                 | 49 |
| 3.3 | Micro-PL Spectroscopy of the (110) GaAs QWs .....                                                    | 50 |
| 3.4 | Interface Roughness in the (110) GaAs QWs<br>and T Wires Grown by the CEO Method .....               | 54 |
| 4   | Formation of an Atomically Flat Surface on the (110) GaAs Grown<br>by the CEO Method .....           | 54 |
| 4.1 | Atomic Arrangements of the (001)<br>and (110) GaAs Surfaces .....                                    | 55 |
| 4.2 | Growth-Interrupt in situ Annealing Technique .....                                                   | 56 |
| 4.3 | Formation of Atomically Flat CEO Surfaces<br>by Growth-Interrupt Annealing .....                     | 56 |
| 4.4 | Surface Morphology of the Annealed Surface<br>with Fractional Monolayer Coverage .....               | 59 |
| 4.5 | Step-Edge Kinetics on the (110) GaAs Surface<br>during Annealing .....                               | 61 |
| 4.6 | First-Principles Calculations<br>of Adatom Migration Barrier Energies on (110) GaAs .....            | 64 |
| 4.7 | Toward Formation<br>of a Wider Atomically Flat (110) GaAs Surface .....                              | 67 |
| 5   | Fabrication of a High-Quality (110) GaAs QW<br>with Atomically Smooth Interfaces .....               | 67 |
| 5.1 | Preparation of a (110) GaAs QW<br>with Atomically Smooth Interfaces .....                            | 69 |
| 5.2 | Micro-PL of the (110) GaAs QW .....                                                                  | 69 |
| 6   | Fabrication of a High-Quality Single-Quantum-Wire<br>Laser Structure and its Lasing Properties ..... | 73 |
| 6.1 | Preparation of a Single-T-Wire Laser Structure .....                                                 | 73 |
| 6.2 | Spatial Uniformity of the Electronic States in the T Wire ....                                       | 75 |
| 6.3 | Lasing from a Single-Quantum-Wire Laser .....                                                        | 76 |
| 7   | Concluding Remarks and Future Perspective .....                                                      | 77 |
|     | References .....                                                                                     | 79 |

## Recombination Dynamics

### in $\text{In}_x\text{Ga}_{1-x}\text{N}$ -Based Nanostructures

|     |                                                                                      |    |
|-----|--------------------------------------------------------------------------------------|----|
|     | Yoichi Kawakami, Akio Kaneta, Kunimichi Omae, Yukio Narukawa,<br>Takashi Mukai ..... | 83 |
| 1   | Introduction .....                                                                   | 83 |
| 2   | Material Parameters of $\text{In}_x\text{Ga}_{1-x}\text{N}$ .....                    | 85 |
| 2.1 | Bandgap Energies in $\text{In}_x\text{Ga}_{1-x}\text{N}$ Alloys .....                | 85 |
| 2.2 | Alloy Broadening Factor in $\text{In}_x\text{Ga}_{1-x}\text{N}$ Alloys .....         | 86 |
| 2.3 | Piezoelectric Fields in Strained $\text{In}_x\text{Ga}_{1-x}\text{N}$ Layers .....   | 87 |

|     |                                                                                                                |     |
|-----|----------------------------------------------------------------------------------------------------------------|-----|
| 3   | General Transition Models . . . . .                                                                            | 89  |
| 3.1 | Localization versus Screening of Piezoelectric Field . . . . .                                                 | 89  |

| 1   | Introduction . . . . .                                                                                             | 127 |
| 1.1 | Half-Space Problems<br>and Angular-Spectrum Representation . . . . .                                               | 128 |
| 1.2 | Quantization of Evanescent Electromagnetic Fields<br>and Radiative Decay in Optical Near Field . . . . .           | 130 |
| 1.3 | Detector-Mode Description for Radiation Problem . . . . .                                                          | 131 |
| 1.4 | Outline . . . . .                                                                                                  | 132 |
| 2   | Classical Theory of Radiation from an Oscillating Electric Dipole<br>in Free Space . . . . .                       | 133 |
| 2.1 | Dipole Radiation in Free Space . . . . .                                                                           | 133 |
| 2.2 | Total Radiation Intensity in Free Space . . . . .                                                                  | 137 |
| 3   | Classical Theory of Radiation Based<br>on Angular-Spectrum Representation . . . . .                                | 139 |
| 3.1 | Angular-Spectrum Representation . . . . .                                                                          | 140 |
| 3.2 | Angular-Spectrum Representation<br>of Scattered Electromagnetic Fields . . . . .                                   | 142 |
| 3.3 | Angular Spectrum of Dipole Radiation Fields<br>in Optical Near-Field Regime . . . . .                              | 146 |
| 3.4 | Evaluation of Radiation Based<br>on Angular-Spectrum Representation . . . . .                                      | 148 |
| 4   | Radiative Decay of Oscillating Electric Dipole in Half-Space Based<br>on Angular-Spectrum Representation . . . . . | 150 |
| 4.1 | Half-Space Problems . . . . .                                                                                      | 150 |
| 4.2 | Angular-Spectrum Representation of Radiation Fields<br>in Half-Space . . . . .                                     | 154 |
| 4.3 | Electric Dipole Radiation into Medium . . . . .                                                                    | 156 |

## XII Contents

|     |                                                                                                             |     |
|-----|-------------------------------------------------------------------------------------------------------------|-----|
| 4.4 | Electric Dipole Radiation<br>into the Vacuum-Side Half-Space .....                                          | 157 |
| 4.5 | Interaction between Electric Dipole and Dielectric Surface ...                                              | 158 |
| 5   | Quantum Theory of Dipole Radiation Near a Dielectric Surface<br>Based on Detector Modes .....               | 161 |
| 5.1 | Normal Modes as the Basis of Field Quantization<br>in Half-Space Problems; Triplet and Detector Modes ..... | 162 |
| 5.2 | Detector-Mode Functions .....                                                                               | 165 |
| 5.3 | Electric Field Operator in Half-Space Problems .....                                                        | 168 |
| 5.4 | Spontaneous Emission into Right Half-Space .....                                                            | 170 |
| 5.5 | Spontaneous Emission into Left Half-Space .....                                                             | 172 |
| 5.6 | Radiative Decay Rate and Lifetime of Electric Dipole<br>in Half-Space .....                                 | 173 |
| 5.7 | Dependence of Radiative Lifetime on Magnetic<br>Quantum Number of Atom in Half-Space Problems .....         | 176 |
| 6   | Quantum Theory of Multipole Radiation<br>in Optical Near-Field Regime .....                                 | 181 |
| 6.1 | Multipole Transition Matrix Elements .....                                                                  | 182 |
| 6.2 | Spontaneous Decay Rate of Multipoles in Half-Space .....                                                    | 184 |
| 7   | Tunneling Picture of Optical Near-Field Interactions .....                                                  | 188 |
| 7.1 | Energy Transport via Tunneling<br>in Optical Near-Field Interactions .....                                  | 189 |
| 7.2 | Fundamental Process in Nano-Optics Device .....                                                             | 192 |
|     | Appendices .....                                                                                            | 193 |
| A   | Vector Spherical Wave .....                                                                                 | 193 |
| B   | Expansion of the Vector Plane Wave in Terms<br>of the Vector Spherical Waves .....                          | 195 |
| C   | Multipole Expansion of Transition Current .....                                                             | 196 |
|     | References .....                                                                                            | 198 |
